Acute Care for Elders Michael L. Malone, Elizabeth A. Capezuti, Robert M. Palmer, 2014-07-21 Acute Care for Elders (ACE) is a model of care designed to improve functional outcomes and to improve the processes for the care of older patients. This model includes: an environment of care designed to promote improved function for older patients; an interdisciplinary team that works together to identify/address the vulnerabilities of the older patients; nursing care plans for prevention of disability; early planning to help prepare the patient to return home and a review of medical care to prevent iatrogenic illness. Acute Care for Elders: A Model for Interdisciplinary Care is an essential new resource aimed at assisting providers in developing and sustaining an ACE program. The interdisciplinary approach provides an introduction to the key vulnerabilities of older adults and defines the lessons learned from the Acute Care for Elders model. Expertly written chapters describe critical aspects of ACE: the interdisciplinary approach and the focus on function. The fundamental principles of ACE described in this book will further assist hospital leaders to develop, implement, sustain and disseminate the Acute Care for Elders model of care. Acute Care for Elders: A Model for Interdisciplinary Care is of great value to geriatricians, hospitalists, advance practice nurses, social workers and all others who provide high quality care to older patients.

Geriatric Trauma and Acute Care Surgery Aurelio Rodriguez, Robert. D Barraco, Rao R. Ivatury, 2018-03-21 The purpose of this book is to give providers of all levels a simple and essential source of practical information in treating the elderly trauma and emergency surgery patient. The Introduction instructs practitioners how to evaluate and assess risk including frailty and use this information in Goals of Care discussions to facilitate shared decision making so crucial to this population. The individual chapters consist of best practices and care guidelines from some of the most well-known thought leaders and best trauma centers in the country across the spectrum from geriatricians to trauma and acute care surgeons and nurses. Each chapter contains easy-to-read algorithms and references that the readers can use and adapt for their own setting. Chapters on Pre-hospital care will help guide EMS organizations and even systems in the right care and triage of the elderly. Each chapter also contains a Nursing Focus section for helpful nursing tips in caring for the elderly with those injuries and problems. These sections make this book a must-have for any center looking to improve its care of the elderly patient or just trying to be sure its care is already the best it can be. A special section on Post Acute Care will introduce the provider to the common issues surrounding particular disposition destinations for the elderly patient. This will facilitate

discussions with families, case managers and facilities to help improve time to disposition.

Acute Care Nursing Julia Gilbert, Elisabeth Coyne, 2018-08 This text equips students with foundational knowledge of the pathophysiology, treatment and legal and ethical issues associated with common acute conditions. Through the person-centred, collaborative care approach, students will also learn effective communication and cultural competency skills that are essential for nurses in any practice context.

Geriatric Emergencies Lee A. Lindquist, Scott M. Dresden, 2019-05-15 Care for older adults in Emergency Departments (EDs) has historically been focused on acute medical conditions with little emphasis on geriatric-specific issues. In 2010, emergency departments (EDs) throughout the nation saw almost 130 million patients, 15% of whom were 65 or older. The number of older adults who visit an ED has doubled in the last decade and continues to grow rapidly. Older adults receiving care in an ED are highly likely to be admitted to the hospital, much more so than their younger counterparts. Preventing a hospital admission saves older adults from frequently encountered adverse events, including hospital-acquired delirium, functional status impairment, cognitive loss, and nursing home admission. It is unknown how many older adults are hospitalized for reasons other than acute medical illness, such as functional decline, polypharmacy, progressive dementia, caregiver stress, or unstable living situation. These non-emergent conditions are rarely addressed during a typical ED visit due to lack of resources, significant patient volumes, and the need for rapid turnover of care spaces. The predominant management strategy of emergency physicians to handle these important but not imminently life-threatening geriatric issues is to recommend hospital admission. Northwestern has pioneered the Geriatric Emergency Department through the creation of the Geriatric Emergency Department Innovation model (GEDI), with goals to prevent admissions for older adults by assessing and meeting their geriatric-specific, non-acute care needs in the ED. The GEDI model at Northwestern centers on a multi-disciplinary curriculum composed of clinical, didactic, and practical arms developed by emergency medicine and geriatrics educational experts. In this title, we will present case studies of older adults seen in the Emergency Department through the GEDI model and discuss means of identifying/screening for, diagnosing, and treating geriatric syndromes seen in the emergent care of the older adult patient. In addition, there will be a set of concise “take-home points” for each case study that will be easy to commit to memory and implement in clinical care of older adults. As the number of seniors seeking emergent care will continue to increase, the ED setting must become responsive to geriatric-specific needs. This book will provide a variety of models detailing how to offer comprehensive, state-of-the-art, optimal care for managing the full range of geriatric syndromes that regularly present in the emergent care setting.

Care of Older Adults Wendy Moyle, Deborah Parker, Marguerite Bramble, 2014-09-19 Written by internationally renowned authors, this is a comprehensive introduction to aged care for the nursing profession in clinical practice.

Acute Medicine in the Frail Elderly Henry Woodford, James George, 2021-06-10 Frail older people now contribute the majority of the acute emergency take both medical and surgical. Despite this there is often a lack of confidence and knowledge among doctors and nurses in treating older people in the Emergency Department and on Emergency Assessment Units. From the Preface Emergency care of frail older people is challenging but very rewarding. Older patients tend to be complex and therefore their assessment needs to be more extensive and include comprehensive geriatric assessment. It is the extras in their assessment that are not usually needed in younger patients, such as cognitive, functional and social evaluations that make the difference in achieving a better outcome. This book describes the key features of high quality care

for frail elderly patients in acute hospital settings. With chapters on assessment and the characteristic non-specific ways that patients tend to present (such as 'confusion', 'collapse query cause' and 'off legs'), this practical guide is ideal to have on-hand. As well as common medical and surgical conditions, it also covers medication management, elder abuse, pressure ulcers and hypothermia, including the physiological changes seen in ageing and ways to define frail patients. Tables, diagrams and images are ideal for quick reference, and key points are summarised throughout the text to aid comprehension, providing doctors, nurses and therapists with both background and essential information to provide the excellent acute care older people deserve.

Functional Performance in Older Adults Bette R Bonder, Vanina Dal Bello-Haas, 2017-12-04 Support the very best health, well-being, and quality of life for older adults! Here's the ideal resource for rehabilitation professionals who are working with or preparing to work with older adults! You'll find descriptions of the normal aging process, discussions of how health and social factors can impede your clients' ability to participate in regular activities, and step-by-step guidance on how to develop strategies for maximizing their well-being.

Delirium in Elderly Patients Ahmet Turan Isik, George T. Grossberg, 2017-12-11 This book provides a comprehensive, scholarly, and practical account of delirium that will be of value for all doctors and nurses involved in the care of the elderly. It not only offers a state of the art update on delirium, covering its history, epidemiology, pathophysiology, assessment, diagnosis, causes, prevention, and management, but also presents evidence-based and practical information relevant to daily clinical routine. Owing to the complex multifactorial causes of delirium, different aspects of delirium in the elderly are discussed from a variety of perspectives. The book closes by presenting a series of case vignettes, delirium assessment tools and screening scales, and a list of those drugs highly associated with delirium. Delirium is a cognitive disorder characterized by deficits in attention, arousal, consciousness, memory, orientation, perception, speech, and language. It is a common and serious problem among older persons at every healthcare interface. Although it occurs in 10-60% of the older hospitalized population, delirium remains a relatively misunderstood and misdiagnosed condition. This book will be of interest to professionals working in geriatrics, geriatric psychiatry, general psychiatry, or neurology, internists, intensive care unit specialists, and all who care for the elderly in hospitals or the community.

Nursing for Wellness in Older Adults Carol A. Miller, 2021-11-24 Grounded in the author's Functional Consequences Theory for Promoting Wellness in Older Adults, *Nursing for Wellness in Older Adults*, 9th Edition, instills a functional understanding of both the physiologic and psychosocial aspects of aging, as well as common risk factors, to prepare students for effective, wellness-oriented gerontological practice in today's changing healthcare environment. This extensively updated edition reflects the latest issues in the care of older adults and ensures an actionable understanding of culturally appropriate care, legal matters, ethical concerns, and more.

Ebersole and Hess' Gerontological Nursing & Healthy Aging - E-Book Theris A. Touhy, Kathleen F Jett, 2021-04-07

****Selected for Doody's Core Titles® 2024 with Essential Purchase designation in Geriatrics**** Gain the nursing skills you need to provide wellness-based care for older adults! Ebersole and Hess' *Gerontological Nursing & Healthy Aging*, 6th Edition uses a holistic approach to describe compassionate care along a continuum of wellness. Designed to promote healthy aging regardless of the patient's situation or disorder, this text provides best-practice guidelines in covering physical, psychosocial, spiritual, and cognitive health. New to this edition are Next Generation NCLEX®-style case studies, updates on measuring clinical judgment, expanded coverage of core competencies, and more. Written by gerontological nursing experts Theris Touhy and Kathleen Jett, this concise text provides a solid foundation in every aspect of healthy aging. - Focus on health and wellness provides the evidence-based information and strategies needed to promote healthy aging. - Key concepts, learning activities, and discussion questions in every chapter emphasize the information needed to enhance care. - Recommended competencies from the AACN and the Hartford Institute for Geriatric Nursing are integrated throughout. - Discussion of disease processes is placed in the context of healthy adaptation, nursing support, and responsibilities. - Easy-to-use information on nursing techniques and communication appears with the associated disorders, symptoms, and situations. - Tips for Best Practice and Resources for Best Practice boxes provide insight into proven methods of nursing care. - Discussions of nursing and interprofessional actions help students learn to enhance wellness, maintain optimal function, and prevent unnecessary disability. - Coverage of age, cultural, racial, and gender differences highlights these important considerations in caring for older adults. - NEW! Updates reflect the NCSBN Clinical Judgment Model. - NEW! Next Generation NCLEX® (NGN)-style case studies provide optimal preparation for the Next Generation NCLEX Examination. - NEW! Specialized information addresses the unique needs of older adults such as atypical disease presentation, geriatric syndromes, neurocognitive disorders, quality of life with chronic illness, legal and ethical issues, and mental health challenges such as depression and substance abuse. - NEW! Coverage of competencies of expanding nursing roles in the care of older adults addresses the continuum of care. - NEW! Gerontological expertise is incorporated into nursing actions and complements other nursing texts (including med-surg, community health, mental health, and assessment books) used in programs without a freestanding gerontological nursing course. - NEW! Expanded content includes information on COPD guidelines, medication use and misuse, Alzheimer's Disease, wound care guidelines, diagnosis and treatment of sleep-disordered breathing, joint replacement, caregiver strain, hospice and transitional care, and more.

Iatrogenicity Ihor B. Gussak, John B. Kostis, Ibrahim Akin, Martin Borggrefe, Giovanni Campanile, Arshad Jahangir, Willam J Kostis, Gan-Xin Yan, 2018-02-15 Iatrogenesis is the occurrence of untoward effects resulting from actions of health care providers, including medical errors, medical malpractice, practicing beyond one's expertise, adverse effects of medication, unnecessary treatment, inappropriate screenings, and surgical errors. This is a huge public health issue: tens to hundreds of

thousands of deaths are attributed to iatrogenic causes each year in the U.S., and vulnerable populations such as the elderly and minorities are particularly susceptible. Edited by two renowned cardiology experts, *Iatrogenicity: Causes and Consequences of Iatrogenesis in Cardiovascular Medicine* addresses both the iatrogenicity that arises with cardiovascular interventions, as well as non-cardiovascular interventions that result in adverse consequences on the cardiovascular system. The book aims to achieve three things: to summarize the available information on this topic in a single high-yield volume; to highlight the human and financial cost of iatrogenesis; and to describe and propose potential interventions to ameliorate the effects of iatrogenesis. This accessible book is a practical reference for any practicing physician who sees patients with cardiovascular issues. .

Practical Geriatric Assessment Howard Fillit, Gloria Picariello, 1998 Geriatric assessment is an integral part of geriatric care throughout the world. The frail elderly often have multiple chronic illnesses, functional disabilities and psychosocial problems, their needs therefore extending far beyond the treatment of a single medical condition. Comprehensive assessment of such patients requires a multidisciplinary team approach and the use of an organized, efficient set of guidelines and procedures with which to identify and address potentially 'reversible' problems. The ultimate goal is then to systematically restore and maintain the functions essential to preserve quality of life. *Practical Geriatric Assessment* is structured for ease of quick reference. The background to each application of geriatric assessment is given first, and this is then placed in its practical context, thus providing an essential guide to the principles and methods of effective geriatric assessment.

Reichel's Care of the Elderly Christine Arenson, Jan Busby-Whitehead, Kenneth Brummel-Smith, James G. O'Brien, Mary H. Palmer, William Reichel, 2009-02-09 The sixth edition remains the pioneering text for the practising physician confronted with the unique problems of an increasingly elderly population. Dr William Reichel's formative text is designed as a practical and useful guide for health specialists from medical students to practicing physicians. This book is not a collection of subspecialty chapters but rather emphasizes the clinical management of the geriatric patient with simple to complex problems. The editors have reviewed every chapter and have included the most up-to-date advances in the care of the elderly. New chapters include hormonal therapy in post-menopausal women, drug therapy for Alzheimer's sufferers, alternative medicine, the chronic understaffing of nursing homes, management of delirium, and ethical issues. Comprehensive and written for any clinicians caring for older patients (including family physicians, general internists, nurse practitioners, geriatricians, and other specialists), this esteemed text provides practical and trusted advice.

Urgent Care Emergencies Deepi G. Goyal, Amal Mattu, 2012-11-05 *Urgent Care Emergencies* Avoiding the Pitfalls and Improving the Outcomes If you see patients in an urgent care center, minor injury unit or other acute care setting, this new clinically-focused guide will help you avoid high-risk pitfalls and achieve optimal outcomes. This must-have resource covers a

wide range of emergencies that may be encountered in an urgent care setting, focusing on those that can occur with the most commonly-encountered complaints and conditions, including: Genitourinary complaints Common infections Orthopedic injuries Wounds Back pain Dermatologic complaints The book also includes chapters on common pitfalls during the HEENT examination, effective patient communications, urgent care pharmacology pitfalls, special issues in the care of pediatric and geriatric patients, and more. Each chapter is authored by an experienced acute care clinician and includes clinical pearls that you can apply directly to the care of your own patients. The urgent care center can be a challenging and fast-paced environment, and pitfalls, especially those encountered during emergencies, can have serious consequences for patients' immediate well-being, their recovery time, and possibly their long-term prognosis. More than ever, you need a resource you can trust that has been tailored specifically to the needs of providers in the low-acuity setting.

Evidence-Based Geriatric Nursing Protocols for Best Practice Elizabeth Capezuti, DeAnne Zwicker, Terry T. Fulmer, Marie Boltz, Marie P. Boltz, Ardis O'Meara, 2011-11-18 Named a 2013 Doody's Core Title! The evidence-based protocols are designed as a primary reference and are useful, substantive, and timely...The broader contributions of useful format and succinct review of the evidence make it likely that this text will continue to be the leading resource in nursing education and practice.--The Gerontologist Now more than ever, nurses are called upon to lead efforts to embed evidence-based practice in daily operations. As the IOM report states, 'nurses have key roles to play as team members and leaders for a reformed and better-integrated, patient-centered health care system.' The process of implementing sweeping change in health care will likely take years; however, nurses must start pragmatically and focus on these critically important protocols that have demonstrated improved outcomes for older adults. Simply stated, 'Pick this book up and use it.' From the Foreword, Susan L. Carlson, MSN, APRN, ACNS-BC, GNP-BC, FNGNA President, National Gerontological Nursing Association As a gerontological clinical educator/research nurse, I will often use this as a reference. The format and the content are good, and the explanations of how to best use the evidence simplify the process of sifting through mountains of information to figure the best practice. Score: 97, 5 Stars. --Doody's One of the premier reference books for geriatric nurses in hospital, long-term, and community settings, this 4th edition has been thoroughly updated to provide the most current, evidence-based protocols for care of common clinical conditions and issues in elderly patients. Designed to improve the quality, outcomes, and cost-effectiveness of health care, these guidelines are the result of collaboration between leading practitioners and educators in geriatric nursing and New York University College of Nursing. Protocols for each clinical condition have been developed by experts in that particular area, and most have been systematically tested by over 300 participating hospitals in Nurses Improving Care for Health System Elders (NICHE). Evidence is derived from all levels of care, including community, primary, and long-term care. A systematic method in compliance with the AGREE appraisal process was used to rate the levels of evidence for each protocol. Protocols are organized in a consistent format for ease of

use, and each includes an overview, evidence-based assessment and intervention strategies, and an illustrative case study with discussion. Additionally, each protocol is embedded within chapter text, which provides the context and detailed evidence for the protocol. Each chapter contains resources for further study. Key Features: Updated to provide a wide range of evidence-based geriatric protocols for best practices Contains new chapters on function-focused care, catheter-associated urinary tract infections, mistreatment detection, acute care models, and transitional care Illustrates application of clinical protocols to real-life practice through case studies and discussion Edited by nationally known leaders in geriatric nursing education and practice, who are endorsed by the Hartford Institute for Geriatric Nursing and NICHE Encompasses the contributions of 58 leading practitioners of geriatric care Written for nursing students, nurse leaders, and practitioners at all levels, including those in specialty roles

Improving Hospital Care for Persons with Dementia Nina M. Silverstein, PhD, Katie Maslow, MSW, 2005-11-09 What happens when a person with dementia is hospitalized? It is usually a fall, a hip fracture, a serious infection, or an acute exacerbation of congestive heart failure, diabetes, or another chronic medical condition that precipitates hospitalization, not the person's dementia. This book provides insights into the issues and gaps in quality of hospital care for patients with dementia. The book will help practitioners improve the experiences that patients with dementia encounter in acute care settings by offering actual case examples provided by managers of assisted living, emergency rooms, and community geriatric cases; by persons with dementia who live alone; and by other doctors and nurses who care for these patients. These case examples illustrate the challenges faced and suggest strategies for successful and appropriate treatment planning. This book will be useful for all hospital practitioners who encounter patients with dementia, from administrators, to nurses, social workers, physicians, gerontologists, and psychologists.
