Urban Food Deserts in Japan Nobuyuki Iwama,Tatsuto Asakawa,Koichi Tanaka,Midori Sasaki,Nobuhiko Komaki,Masashi Ikeda,2021-04-15 This book introduces the Japanese urban food desert (FD). Currently, Japan has the most rapidly aging society in the world, with a shrinking population and food desert issues in connection with the isolation of the elderly people from their families and local communities. The types of food deserts that Japan is currently facing are likely to occur in many other countries under similar circumstances in the near future. This book serves as a valuable resource for researchers and policymakers who are working on FD issues in Japan as well as in other countries. The book consists of 8 chapters, with each chapter covering a different aspect of FD, and it also includes case studies, one of which is the FD in Tokyo.

Food and Poverty Leslie Hossfeld,E. Brooke Kelly,Julia Waity,2018-09-24 Food insecurity rates, which skyrocketed with the Great Recession, have yet to fall to pre-recession levels. Food pantries are stretched thin, and states are imposing new restrictions on programs like SNAP that are preventing people from getting crucial government assistance. At the same time, we see an increase in obesity that results from lack of access to healthy foods. The poor face a daily choice between paying bills and paying for food.

Remaking the North American Food System C. Clare Hinrichs,Thomas A. Lyson,2007 Examines the resurgence of interest in rebuilding the links between agricultural production and food consumption. With examples from Puerto Rico to Oregon to Quebec, this work offers a North American perspective attuned to trends toward globalization at the level of markets and governance and shows how globalization affects specific localities.

Food Geographies Pascale Joassart-Marcelli,2022-02-25 What is the significance of food in our everyday lives? Food Geographies addresses this broad question by examining the social, political, and ecological connections that food weaves between people and places across the world and revealing the centrality of food in the human experience. This interdisciplinary and systemic perspective provides readers with key concepts, analytical tools, and critical skills to better understand and address the many issues facing the contemporary food system, including food insecurity, environmental degradation, climate change, labor exploitation, social inequality, power imbalance in decision making, and threats to health

and well-being. It takes readers to places including modern plantations in Peru, collective farms in Tanzania, food halls in France, home kitchens in Japan, community gardens in Brazil, pubs in England, and animal feeding operations in America. By raising important questions about the current system, readers will explore ways to enact meaningful change to build better future food geographies by producing, consuming, and engaging with food differently.

Critical Mapping for Sustainable Food Design Audrey G. Bennett, Jennifer A. Vokoun, 2023-05-02 This book introduces critical mapping as a problematizing, reflective approach for analyzing systemic societal problems like food, scoping out existing solutions, and finding opportunities for sustainable design intervention. This book puts forth a framework entitled wicked solutions that can be applied to determine issues that designers should address to make real differences in the world and yield sustainable change. The book assesses the current role of design in attaining food security in a sustainable, equitable, and just manner. Accomplishing this goal is not simple; if it was, it would not be called a wicked problem. But this book shows how a particular repertoire of design tools can be deployed to find solutions and strategize the development of novel outcomes within a complex and interconnected terrain. To address the wicked problem of food insecurity, inequity, and injustice, this book highlights 73 peer-reviewed design outcomes that epitomize sustainable food design. This includes local and regional sustainable design outcomes funded or supported by public or private institutions and local and widespread design outcomes created by citizens. In doing so, this book sets the stage for an evidence-driven and evidence-informed design future that facilitates the designers' visualization of wicked solutions to complex social problems, such as food insecurity. Drawing on an array of case studies from across the world, from urban rooftop farms and community cookers to mobile apps and food design cards, this book provides vitally important information about existing sustainable food design outcomes in a way that is organized, accessible, and informative. This book will be of great interest to academics and professionals working in the field of design and sustainable food systems. Students interested in learning about food and sustainability from across design studies, food studies, innovation and entrepreneurship, urban studies, and global development will also find this book of great use.

Planning for Equitable Urban Agriculture in the United States Samina Raja, Marcia Caton Campbell, Alexandra Judelsohn, Branden Born, Alfonso Morales, 2024-03-19 This open access book, building on the legacy of food systems scholar and advocate, Jerome Kaufman, examines the potential and pitfalls of planning for urban agriculture (UA) in the United States, especially in how questions of ethics and equity are addressed. The book is organized into six sections. Written by a team of scholars and practitioners, the book covers a comprehensive array of topics ranging from theory to practice of planning for equitable urban agriculture. Section 1 makes the case for re-imagining agriculture as central to urban landscapes, and unpacks why, how, and when planning should support UA, and more broadly food systems. Section 2, written

by early career and seasoned scholars, provides a theoretical foundation for the book. Section 3, written by teams of scholars and community partners, examines how civic agriculture is unfolding across urban landscapes, led largely by community organizations. Section 4, written by planning practitioners and scholars, documents local government planning tied to urban agriculture, focusing especially on how they address questions of equity. Section 5 explores UA as a locus of pedagogy of equity. Section 6 places the UA movement in the US within a global context, and concludes with ideas and challenges for the future. The book concludes with a call for planning as public nurturance – an approach that can be illustrated through urban agriculture. Planning as public nurturance is a value-explicit process that centers an ethics of care, especially protecting the interests of publics that are marginalized. It builds the capacity of marginalized groups to authentically co-design and participate in planning/policy processes. Such a planning approach requires that progress toward equitable outcomes is consistently evaluated through accountability measures. And, finally, such an approach requires attention to structural and institutional inequities. Addressing these four elements is more likely to create a condition under which urban agriculture may be used as a lever in the planning and development of more just and equitable cities. This is an open access book. This is an open access book.

Handbook of Nutrition and Food Carolyn D. Berdanier, Johanna T. Dwyer, David Heber, 2016-04-19 The new edition of the Handbook of Nutrition and Food follows the format of the bestselling earlier editions, providing a reference guide for many of the issues on health and well being that are affected by nutrition. Completely revised, the third edition contains 20 new chapters, 50 percent new figures. A comprehensive resource, this book is a reference guide for many of the issues on health and well being that are affected by nutrition. Divided into five parts, the sections cover food, including its composition, constituents, labeling, and analysis; nutrition as a science, covering basic terminology, nutritional biochemistry, nutrition and genetics, food intake regulation, and micronutrients; nutrient needs throughout the human life cycle; assessment of nutrient intake adequacy; and clinical nutrition, from assessments to a wide variety of disease and health topics.

Food Health Janet Chrzan, John Brett, 2017-02-01 Nutritional Anthropology and public health research and programming have employed similar methodologies for decades; many anthropologists are public health practitioners while many public health practitioners have been trained as medical or biological anthropologists. Recognizing such professional connections, this volume provides in-depth analysis and comprehensive review of methods necessary to design, plan, implement and analyze public health programming using anthropological best practices. To illustrate the rationale for use of particular methods, each chapter elaborates a case study from the author's own work, showing why particular methods were adopted in each case.

The Consuming Geographies of Food Hillary J. Shaw, 2014-04-24 The consumption and distribution of food, as well as its production, has become a major public policy issue over the past few decades; what we eat is no longer merely a private

matter but carries significant externalities for wider society. Its increasing significance within the public arena implies a dissonance regarding the boundaries of food; where do we draw the line between food as private and food as public? What are the rights of society to impinge upon individual food consumption, and what conflicts will ensue when this boundary is disputed? The Consuming Geographies of Food explores these multiple issues of food across different regions of the world from the consumer's perspective. It uniquely explicates the factors that lead customers towards certain typologies of consumption and towards certain types of retailing, offering a comprehensive review of the obesity problem, the phenomenon of food deserts and the issue of exclusion from a healthy diet. It then considers the effects of food on the consumer, the dynamic relationship between food and people, and the issue of food exclusion before concluding with possible futures for food consumption, from low-technology projects to high-technology scenarios. Based on original research into food access, ethics and consumption in both developed and less-developed countries this book will be of interest to students, researchers and academics in the fields of geography, economics, hospitality health, marketing, nutrition and sociology.

Global Encyclopedia of Public Administration, Public Policy, and Governance Ali Farazmand, 2023-04-05 This global encyclopedic work serves as a comprehensive collection of global scholarship regarding the vast fields of public administration, public policy, governance, and management. Sustainability and Sustainable Development Lisa Benton-Short, 2023-02-23 The challenge in teaching an introductory course on sustainability is there are many ways to teach it, and many issues to cover. The United Nations Sustainable Development Goals offer a cohesive and interconnected set of topics to help address this problem - indeed the SDGs are now the guiding framework for planning and implementing sustainability through 2030. They are the focus of international development efforts, and the lingua franca of sustainability as a field of study, the international consensus on "what is sustainability?" As such, the UN SDGs present an ideal framework for an introductory level textbook because taken together, they integrate the "Three Es"-environment, economic development, and equity-that are the core definition of sustainability. This book introduces students to sustainability structured around the 17 UN SDGs. Through a global perspective, with attention given equally to how sustainability challenges the highest income countries of the Global North, as well as to the moderate- and low-income countries of the Global South, Benton-Short synthesizes basic environmental science, policy, and interdisciplinary perspectives while investigating key challenges to developing a more sustainable future through the SDG framework. Readers will easily tackle this complex set of topics through an accessible writing style, comprehensive scholarship, and diverse perspectives. Guided by a lush art program, complete with numerous maps, figures, and photos to

enliven the presentation, students will develop a greater understanding of the important trends in sustainability in the twenty-first century. The broad arguments highlighted through numerous case studies and boxes prepare global citizens to grapple with the environmental, social, economic, and political challenges that face our collective future. Features of this exciting, brand-new text include: - Chapter opening learning objectives to guide students' course goals - Helpful study aids such as key terms-bolded in the text and compiled both at the end of each chapter and in a comprehensive glossary - End-of-chapter questions for discussion and activities to promote active learning - A stunning art program, with detailed maps, figures, tables, and photos, to engage students as visual learners - Critical Perspectives and Expert Voice boxes to present the diverse perspectives in sustainability - Interconnections boxes to help students tie together ideas across the issues - Key Terms and Concepts and Understanding the Issue boxes to go in-depth on important topics - Making Progress and Solutions boxes that show students hopeful trends toward seemingly intractable problems - SDGs and the Law boxes that provide a legal and governance context

Just Food Jill M. Dieterle, 2015-11-09 Who has access, and who is denied access, to food, and why? What are the consequences of food insecurity? What would it take for the food system to be just? *Just Food: Philosophy, Justice and Food* presents thirteen new philosophical essays that explore the causes and consequences of the inequities of our contemporary food system. It examines why 842 million people globally are unable to meet their dietary needs, and why food insecurity is not simply a matter of insufficient supply. The book looks at how food insecurity tracks other social injustices, covering topics such as race, gender and property, as well as food sovereignty, food deserts, and locavorism. The essays in this volume make an important and timely contribution to the wider philosophical debate around food distribution and justice.

Everybody Eats Marianne LeGreco, Niesha Douglas, 2021-08-31 *Everybody Eats* tells the story of food justice in Greensboro, North Carolina—a midsize city in the southern United States. The city's residents found themselves in the middle of conversations about food insecurity and justice when they reached the top of the Food Research and Action Center's list of major cities experiencing food hardship. Greensboro's local food communities chose to confront these high rates of food insecurity by engaging neighborhood voices, mobilizing creative resources at the community level, and sustaining conversations across the local food system. Within three years of reaching the peak of FRAC's list, Greensboro saw an 8 percent drop in its food hardship rate and moved from first to fourteenth in FRAC's list. Using eight case studies of food justice activism, from urban farms to mobile farmers markets, shared kitchens to food policy councils, *Everybody Eats* highlights the importance of communication—and communicating social justice specifically—in building the kinds of infrastructure needed to create secure and just food systems.

States of Disease Brian King, 2017-01-03 Human health is shaped by the interactions between social and ecological systems. *States of Disease* advances a social ecology of health framework to demonstrate how historical spatial formations

contribute to contemporary vulnerabilities to disease and the possibilities for health justice. The book examines how managed HIV in South Africa is being transformed with expanded access to antiretroviral therapy, and how environmental health in northern Botswana is shifting due to global climate change and flooding variability. These cases demonstrate how the political environmental context shapes the ways in which health is embodied, experienced, and managed--Provided by publisher.

Introduction to Ethnographic Research Kimberly Kirner, Jan Mills, 2019-09-05 Introduction to Ethnographic Research streamlines learning the process of research, speaks to the student at a foundational level, and helps the reader conquer the apprehensions of mastering research methods. Written in a conversational style, authors Kimberly Kirner and Jan Mills use a focus on scaffolding across the chapters to help the student transition from step to step in the research process. Case studies and first-hand accounts are also featured in each chapter, allowing the student to see the early steps, successes and at times failures that accomplished researchers experienced in their past. These real examples further encourage the student that even the best researchers failed along the way, and more importantly, learned from those mistakes. This text is designed to be used as a stand alone book, but is enhanced by the use with the supplemental workbook, Doing Ethnographic Research by the same authors. This text has call-outs to the supplemental text, which allow for application and practice of the material learned.
