Business Governance and Society Rajagopal,Ramesh Behl,2018-09-14 This volume critically analyzes the convergence of technology, business practices, public policies, political ideologies, and societal values for improving business performance at the global-local paradigm. It also enriches knowledge on contemporary business strategies against conventional wisdom of managing companies today. Shifts in the global economic and political order have significantly affected the business patterns within developed, developing, and emerging markets. The reversal of political ideologies from liberal to protectionist business frameworks are disrupting the trade flows that were rooted in the international economy since the mid-twentieth century. The essays contemplate developing new visions and business perspectives to match with the changing political ideologies in emerging markets. This volume will serve as a valuable tool to readers looking for global market management strategies to generate cost-effective business models and create convergence with political and social values to drive better governance of businesses.

Pulse Robert Frenay,2025-08-22 Pulse is not about dance music, not about heart rates—and not about electromagnetic fields. What it does describe is a sea change in human affairs, a vast and fundamental shift that is about to transform every aspect of our lives. Written in lively prose for lay readers, Pulse shows how ideas that have shaped Western science, industry, and culture for centuries are being displaced by the rapid and dramatic rise of a new biology—by human systems and machines that work like living things. In Pulse, Robert Frenay details the coming world of • emotional computers • ships that swim like fish • hard, soft, and wet artificial life • money that mimics the energy flows in nature • evolution at warp speed And these are not blue-sky dreams. By using hundreds of vivid and concrete examples of cutting-edge work, Frenay showcases the brilliant innovations and often colorful personalities now giving birth to a radical new future. Along the way, he also offers thoughtful conclusions on the promises—and dangers—of our transformation to the next great phase of human cultural evolution.

Human Rights Obligations of Non-State Actors Andrew Clapham,2006-03-02 The threats to human rights posed by non-state actors are of increasing concern. Human rights activists increasingly address the activity of multinational corporations, the policies of international organizations such as the World Bank and the World Trade Organization, and international crimes committed by entities such as armed opposition groups and terrorists. This book presents an approach to human rights that goes beyond the traditional focus on states and outlines the human rights obligations of non-state actors. Furthermore, it addresses some of the ways in which these entities can be held legally accountable for their actions in various jurisdictions. The political debate concerning the appropriateness of expanding human rights scrutiny to non-state actors is discussed and dissected. For some, extending human rights into these spheres trivializes human rights and allows abusive governments to distract us from ongoing violations. For others such an extension is essential if human rights are

properly to address the current concerns of women and workers. The main focus of the book, however, is on the legal obligations of non-state actors. The book discusses how developments in the fields of international responsibility and international criminal law have implications for building a framework for the human rights obligations of non-state actors in international law. In turn these international developments have drawn on the changing ways in which human rights are implemented in national law. A selection of national jurisdictions, including the United States, South Africa and the United Kingdom are examined with regard to the application of human rights law to non-state actors. The book's final part includes suggestions with regard to understanding the parameters of the human rights obligations of non-state actors. Key to understanding the legal obligations of non-state actors are concepts such as dignity and democracy. While neither concept can unravel the dilemmas involved in the application of human rights law to non-state actors, a better understanding of the tensions surrounding these concepts can help us to understand what is at stake.

Discerning Good from Bad Credit Booms Mr.Giovanni Dell'Ariccia,Mr.Ehsan Ebrahimi,Ms.Deniz O Igan,Mr.Damien Puy,2020-02-12 Credit booms are a focal point for policymakers and scholars of financial crises. Yet our understanding of how the real sector behaves during booms, and why some booms may go bad, is limited. Despite a large and growing body of literature, most of the work has focused on aggregate economic activity, and relatively little is known about which industries benefit and which suffer during these episodes. This note aims to fill this gap by analyzing disaggregated output and employment data in a large sample of advanced and emerging market economies between 1970 and 2014.

Air Pollution, Clean Energy and Climate Change Anilla Cherian,2022-04-04 AIR POLLUTION, CLEAN ENERGY AND CLIMATE CHANGE Anthropogenic climate change is a globally recognized threat multiplier. Yet, decades of intergovernmental negotiations have failed to curb toxic levels of fossil fuel energy-related air pollution which the World Health Organization (WHO) has identified as the world's largest, single environmental health risk. Lying in plain view are the troubling truths about the morbidity and ill-health burdens associated with anthropogenic climate change that are borne by those who have done the least to contribute to per capita emissions of greenhouse gas emissions. Ignoring the nexus between air pollution, lack of access to clean energy and climate adversities represents a collective failure of the UN's ambitious, universally agreed upon 2030 Sustainable Development Agenda (SDA) which pledged 'to leave no one behind'. This book highlights the air pollution crisis that emanates from the heavy reliance on polluting forms of energy and the urbanization of poverty in developing countries. It provides a framework for understanding why the broader sustainable development community needs to address the more neglected intersection between adverse climatic impacts and energy-related air pollution which devastates the lives of the poorest and most vulnerable amongst us, especially young children, women and the elderly. It focuses on the importance of breaking down persistent global silos and goals on sustainable energy for all, and climate change reflected in the UNs 2030 SDA, and the 2015 Paris Agreement. Integrating clean air and climate mitigation measures that specifically include curbing short lived climate pollutants such as black carbon via innovative partnerships/modalities are seen as vital to clean energy and climate responsive action. This book argues that linked actions by non-nation state actors aimed at reducing air pollution and ameliorating short term climate pollutants in the most populous cities, particularly in countries like India where annual average particulate matter pollution levels consistently exceed WHO guidelines are essential in reducing grave health costs and disease burdens. *Air Pollution, Clean Energy and Climate Change* will be of particular interest to policy makers, researchers, environmental advocates, civil society stakeholders and practitioners who want to understand the urgency of addressing linkages between climate change, fossil fuel energy, air pollution and public health risks. The cover image is an oil painting by Anilla Cherian, which incorporates tree bark and twigs, and serves as a reminder of the daily energy sources used by millions who lack access to clean energy

and are exposed to high levels of household air pollution. It is the second-part of a series, with the first one serving as the cover image to Energy and Global Climate Change (Cherian, 2015). Photograph of painting by Alison Sheehy Photography.

Math Education for America? Mark Wolfmeyer,2013-12-04 Math Education for America? analyzes math education policy through the social network of individuals and private and public organizations that influence it in the United States. The effort to standardize a national mathematics curriculum for public schools in the U.S. culminated in 2010 when over 40 states adopted the Common Core State Standards for Mathematics. Rather than looking at the text of specific policy documents, this book complements existing critical reviews of the national math education curriculum by employing a unique social network analysis. Breaking new ground in detailing and theorizing the politics of math education, Wolfmeyer argues that the private interests of this network are closely tied to a web of interrelated developments: human capital education policy, debates over traditional and reform pedagogy, the assumed content knowledge deficit of math teachers, and the proliferation of profit-driven educational businesses. By establishing the interconnectedness of these interests with the national math education curriculum, he shows how the purported goals of math education reform are aligned with the prevailing political agendas of this social network rather than the national interest.

Environmental Law and Economics Klaus Mathis,Bruce R. Huber,2017-04-07 This anthology discusses important issues surrounding environmental law and economics and provides an in-depth analysis of its use in legislation, regulation and legal adjudication from a neoclassical and behavioural law and economics perspective. Environmental issues raise a vast range of legal questions: to what extent is it justifiable to rely on markets and continued technological innovation, especially as it relates to present exploitation of scarce resources? Or is it necessary for the state to intervene? Regulatory instruments are available to create and maintain a more sustainable society: command and control regulations, restraints, Pigovian taxes, emission certificates, nudging policies, etc. If regulation in a certain legal field is necessary, which policies and methods will most effectively spur sustainable consumption and production in order to protect the environment while mitigating any potential negative impact on economic development? Since the related problems are often caused by scarcity of resources,

economic analysis of law can offer remarkable insights for their resolution. Part I underlines the foundations of environmental law and economics. Part II analyses the effectiveness of economic instruments and regulations in environmental law. Part III is dedicated to the problems of climate change. Finally, Part IV focuses on tort and criminal law. The twenty-one chapters in this volume deliver insights into the multifaceted debate surrounding the use of economic instruments in environmental regulation in Europe.

Financial Technology Law and Regulation in Africa Iwa Salami, 2024-09-30 This book comprehensively analyses financial technology law and regulation in Africa and provides domestic and regional perspectives on regulating FinTech in Africa. It studies policy considerations that can assist African policymakers in facilitating a balanced regulatory approach that does not stifle financial innovation. The growth of financial technology in Africa presents huge opportunities for inclusive growth on the African continent. Digital finance, which sits at the heart of financial technology, could be key to placing Africa back on the economic recovery trajectory after the COVID-19 crisis, facilitating its speed in achieving the UNSDG 2030 goals and setting the continent on course to meet its African Union Agenda 2063. This book: - Examines mobile financial services, crowdfunding, crypto-assets, digital currencies including central bank digital currencies, decentralised finance and open banking and finance, all from an African perspective; - Explores the status of regulation in these areas in Africa, highlighting areas where regulation is lacking, inadequate and in need of reform; - Highlights pragmatic approaches to regulation such as including the adoption of regulatory sandboxes and regulatory technology and discusses requirements for the adoption of supervisory technology in Africa; - Scrutinises the implications of developments in the FinTech space in Africa for international security and economic and financial stability. Placing Africa in the global context, the book argues for an international effort to understand the global dimensions of FinTech developments so that robust and applicable global regulatory frameworks can be applied in developing parts of the world. It will provide useful insights to investors, policy makers and entrepreneurs. It will also be essential reading for students and researchers in the field of technology, public policy, regulatory policy, financial policy, banking, and finance law.

Plastic Money Alya Guseva,Akos Rona-Tas,2014-02-26 In the United States, we now take our ability to pay with plastic for granted. In other parts of the world, however, the establishment of a credit-card economy has not been easy. In countries without a history of economic stability, how can banks decide who should be given a credit card? How do markets convince people to use cards, make their transactions visible to authorities, assume the potential risk of fraud, and pay to use their own money? Why should merchants agree to pay extra if customers use cards instead of cash? In *Plastic Money*, Akos Rona-Tas and Alya Guseva tell the story of how banks overcame these and other quandaries as they constructed markets for credit cards in eight postcommunist countries. We know how markets work once they are built, but this book develops a unique framework for understanding how markets are engineered from the ground up—by selecting key players, ensuring cooperation, and providing conditions for the valuation of a product. Drawing on extensive interviews and fieldwork, the authors chronicle how banks overcame these hurdles and generated a desire for their new product in the midst of a transition from communism to capitalism.
