System Transferability of Public Hospital Facility Management Between Germany and Iran Mandana Banedj-Schafii, 2014-08-13 The subject of this PhD-thesis is the transferability of Facility Management (FM) by using the example of hospitals in Germany and Iran. The intention is to determine the status and significance of facility management in the project countries, to analyse similarities, semblances and differences in order to develop a system transferability model.

An era of personalized medicine in breast cancer: Integrating artificial intelligence into practice Nosheen Masood, San-Gang Wu, 2023-06-29

Brain Tumors: An Interdisciplinary Approach Nima Rezaei, 2025-03-22 The “Brain Tumors: An Interdisciplinary Approach” is the thirteenth volume of the “Interdisciplinary Cancer Research” series, publishes comprehensive volume on diagnosis and treatment of brain tumors. It starts with a general title on an interdisciplinary approach in brain tumors. Inherited genetics syndromes associated with central nervous system tumors as well as the impact of epigenetic methylation on gliomagenesis were explained. Then new approaches on precision medicine in brain tumors are discussed. After discussion on neurosurgical management of brain tumors, neuroimaging and radiosurgery of brain tumors are explained. Novel approaches to bypassing the blood-brain barrier for drug delivery to brain tumors are also discussed. After presentation of pediatric low-grade gliomas, treatment of glioblastoma is the subject of other chapters. The potential role of artificial intelligence in the treatment of glioblastoma is discussed in the last chapter. This is the main concept of Cancer Immunology Project (CIP), which is a part of Universal Scientific Education and Research Network (USERN). This interdisciplinary book will be of special value for neurosurgeons and oncologists who wish to extend their knowledge on brain tumors.

Human Brain and Spinal Cord Tumors: From Bench to Bedside. Volume 1 Nima Rezaei, Sara Hanaei, 2023-01-01 Brain tumors comprise about 5-9% of all human neoplasms; and interestingly the central nervous system (CNS) neoplasms are ranked among the most prevalent neoplasms of childhood as well. Besides to the morphologic and histopathologic characteristics, and as each pathologic states first starts with molecular alterations, each tumor may have its own story in the matter of activating tumorigenesis pathways and having specific molecular characteristics. Importantly, the molecular classification of tumors has been highly considered in the past few decades for taking the most appropriate therapeutic

approach. On the other hand, the tumors shall have tumor-scape mechanisms preventing the immunologic system to eliminate its invasion. The failure of innate and acquired immune system to defeat tumorigenesis mechanisms would consequently result in tumor development. Interestingly, the neuro-immunologic mechanism plays a role in development of psychiatric manifestations of brain tumors as well. Taking all these to account, the different arms of innate immunity, acquired immunity, and genetics have been approached to defeat development and/or progression of such tumors. Accordingly, the activation immunotherapeutic approaches focus on activating or strengthening the anti-tumor immunologic pathways in order to assist the weakened immune system to defeat the tumor (such as Dendritic cell vaccination, DNA vaccines, peptide vaccines, viral vector-based vaccines, monoclonal antibodies, and CAR T-cell therapy). In addition to immunologic components of brain and spinal cord tumors, numerous genes and genetic pathways have been recognized to take part in tumorigenesis. Taking these non-immune genetic pathways to account, some other therapeutic approaches such as stem cell therapy and gene therapy have been developed in the new era of cancer treatment. Moreover, and besides the biologic and medical aspects of these tumors, different physical/mathematical models have been proposed to either explain or predict tumor behavior. Such models would be advantageous in developing new therapeutic modalities in pre-clinical stages and enter new eras in cancer treatment. The first book of Human Brain and Spinal Cord Tumors, Neuro-immunology and Neuro-genetics, will mainly discuss the neuro-immunology and neurogenetic pathways associated with development of brain and spinal cord tumor. After a short introduction chapter, this book will focus on the role of innate and acquired immunity on development of these tumors and then the immunotherapeutic approaches to defeat these tumorigenesis mechanisms. This book will then focus on genetic aspects of brain and spinal cord tumors and bioinformatics models to describe the behavioral patterns of these tumors, as well as associated therapeutic approaches such as stem cell therapy and gene therapy. This volume of book could be useful for experts in basic sciences, mainly geneticists and immunologists, and also physicians of different specialties, mainly neurosurgeons, neurologists, neuropathologists and neuroradiologists.

The Corpus Callosum Mehmet Turgut,R. Shane Tubbs,Ahmet Tuncay Turgut,Cuong C.J. Bui,2023-11-27 This book provides an in-depth review of knowledge of the corpus callosum, called white matter or terra incognita, with emphasis on anatomical, embryological, diagnostics, and surgical features. It includes very informative chapters from leaders in the field, organized into six main groups: first, the embryology, neuroanatomy, and morphometry of the corpus callosum, and animal studies related to it; secondly, neurophysiological aspects, callosal disconnection and the split brain; thirdly, neuropathology, including clinical disorders such as dementia, Tourette syndrome, and schizophrenia; fourthly, surgical procedures including partial and complete callosotomy and commissurotomy; fifthly, cognitive neuroscience; and sixthly, other features of the corpus callosum, including its medicolegal aspects and statistical shape analysis. This comprehensive reference book will be an ideal source for neuroscientists at all levels, from graduate students to researchers in specific disciplines studying this

region including neuroanatomists, embryologists, neurosurgeons, neurologists, neuroradiologists and pediatricians, who seek both basic and more advanced information regarding the distinctive anatomical, physiological and pathological features of the human corpus callosum.

Nipple-Areolar Complex Reconstruction Melvin A. Shiffman, 2018-02-01 This book, written by leading international experts, deals exclusively with reconstruction techniques for the Nipple-Areolar Complex (NAC). The first chapters present the history of the Nipple-Areolar Complex reconstruction and the anatomy of this part of the body. After discussing the abnormalities of the Nipple-Areolar Complex and how to prevent Nipple-Areolar Complex disorders, the book provides extensive documentation on techniques for correcting nipple hypertrophy, nipple inversion, and for increasing nipple projection. Readers will also find helpful information of malposition and tumors of the Nipple-Areolar Complex, as well as complications that can arise during the various surgical techniques. The book offers an invaluable guide for residents and fellow, practicing and highly experienced plastic surgeons, general surgeons, and those in cosmetic surgical subspecialties.

Human Brain and Spinal Cord Tumors: From Bench to Bedside. Volume 2 Nima Rezaei, Sara Hanaei, 2023-07-15 This book aims to gather the current knowledge regarding different aspects of brain and spinal cord tumors in order to more efficiently help the patients. Brain tumors comprise about 5-9% of all human neoplasms; and the central nervous system (CNS) neoplasms are ranked among the most prevalent neoplasms of childhood as well. The more we know about the nature and characteristic of brain and spinal cord tumors, the more precise decision could be made for each patient, in order to reach the best outcome. While surgical resection, chemotherapy, and radiotherapy have been considered as the standards of care for benign and/or malignant CNS tumors since a long time ago, new therapeutic approaches such as immunotherapy have been recently proposed to be considered for treatment of CNS tumors, especially as in some cases, the tumors might be inoperable or the patient may not benefit from other treatment modalities after several recurrences. The second volume of the book focuses on clinical aspects of these tumors. Accordingly, the most important brain and spinal cord tumors are specifically discussed in each chapter based on a rational outlining for all chapter in this volume: Background and epidemiology, genetics, immunology and molecular biology, histopathology and morphology, imaging and radiologic features, clinical manifestations, therapeutic approaches, surgical intervention, chemotherapy and radiotherapy, new therapeutic modalities, follow-up, and prognosis. The chapters of this volume discuss the following pathologies of brain and spinal cord tumors: malignant glioma, benign glioma, meningiomas and other meningeal tumors, ependymomas, medulloblastomas, pineal tumors, choroid plexus and ventricular tumors, neuroectodermal tumors of CNS, neuroepithelial tumors of CNS, pituitary gland tumors, craniopharyngioma, schwannomas and nerve-sheath tumors, hemangioblastomas and other vascular originating tumors, brain and spinal tumors of embryonic origin, germ line cell tumors, malignant bone or cartilage-originating tumors of brain and spine, benign bone or cartilage-originating tumors of brain and spine, brain tumors affecting

the orbit globe and orbit tumors affecting the brain, CNS lymphomas, metastatic lesions of the brain and spine, malignant spinal tumors, benign spinal tumors, brain and/or spinal cord tumors accompanied with other diseases or syndromes, psychological and psychiatric aspects of brain and spinal cord tumors, a brief explanation on surgical approaches for treatment of different brain tumors. This volume of book is useful for physicians of different specialties, mainly neurosurgeons, neurologists, neuropathologists, and neuroradiologists.

Meningioma - The Essentials From Bench to Bedside Sara Hanaei,Seyed Farzad Maroufi,2024-07-17 Explore the world of meningiomas with Meningioma - The Essentials from Bench to Bedside, a definitive resource that bridges the gap between the latest research and clinical practice. This comprehensive volume dives into the molecular and genetic underpinnings of meningiomas, offering a deep understanding of their pathology and diagnosis. The book provides invaluable insights into patient-centered care, highlighting the impact of meningiomas on quality of life and advocating for holistic treatment approaches. With a focus on advanced therapeutic options, including state-of-the-art radiosurgery, it presents the latest techniques and strategies to effectively manage and treat these complex tumors. Whether you are a seasoned professional or a newcomer to the field, this book equips you with the knowledge and tools necessary to improve patient outcomes and advance your expertise. Meningioma - The Essentials from Bench to Bedside is a review of the current understanding of meningiomas offering a wealth of information in a single, accessible volume.

Treatments, Nutraceuticals, Supplements, and Herbal Medicine in Neurological Disorders Colin R Martin,Vinood B. Patel,Victor R Preedy,2023-06-07 Treatments, Nutraceuticals, Supplements and Herbal Medicine in Neurological Disorders offers readers a comprehensive reference on their potential for treatment in a wide variety of neurological diseases. Spanning various types of these compounds, this broad coverage allows readers to learn about the use of nutraceuticals and botanicals alone, or in combination with, other dietary regimes and/or vitamins and minerals. It covers diseases including Alzheimer's, Parkinson's, ALS and MS, and severe neurological conditions including brain injury, stroke, headache and migraine. This volume provides a platform for research on nutraceuticals and botanical agents and on future investigations of these compounds. There are over 600 neurological disorders affecting both the central and peripheral nervous systems, some of which have been treated by nutraceuticals and herbal medicine, hence this is a timely resource on the topics covered. - Summarizes nutraceutical and herbal medicine research for a variety of neurological conditions - Contains chapter abstracts, key facts, a dictionary and a summary - Covers nutraceutical and botanical use in Alzheimer's, Parkinson's, ALS, MS, and more - Includes conditions like migraine, headache, stroke and brain injury

Cardiovascular Considerations in Hematopoietic Stem Cell Transplantation Azin Alizadehasl,Ardeshir Ghavamzadeh,Amir Hossein Emami,Ghasem Janbabaei,Davood Khoda-Amorzideh,2024-04-18 This book discusses the epidemiology and the known cardiotoxic effects of chemoradiation agents in addition to newer therapies in hematopoietic stem cell transplantation

(HSCT). Recent expert consensus statements from cardiology and hematology/oncology societies are reviewed in regard to risk stratification of the patient based on the type of treatments they are undergoing. Finally, gaps in knowledge are identified with proposed avenues of research that allow for more accurate risk assessment, prediction and potential treatment of the HSCT patient in attenuating the risk of developing cardiovascular comorbidities. Cardiovascular Considerations in Hematopoietic Stem Cell Transplantation reveals a picture of effective management of these patients in order to optimize both short- and long-term outcomes of HSCT. It is of considerable interest to all involved or training within this rapidly growing area of cardiology and oncology.

Diseases of the Breast during Pregnancy and Lactation Sadaf Alipour,Ramesh Omranipour,2020-08-20 Symptoms of the breast in gravid women commonly represent physiological changes, however they may also be related to serious underlying

breast disease; this challenging dilemma is aggravated by diagnostic and therapeutic limitations imposed by safety issues regarding the mother and fetus. A comprehensive coverage of all aspects of normal and pathologic breast changes during pregnancy and lactation, their diagnosis and management is provided in the present work. The organized structure of this book begins with gestational changes of the breast, while discussing safety, hazards, and arguments regarding diagnostic approaches. It then goes on by describing various clinical presentations and common and uncommon benign disorders during gravidity. The book then addresses pre-malignant lesions of the breast, opening the dialogue on how to manage these confusing lesions in pregnant and nursing women. It continues toward pregnancy-associated breast cancer, focusing on every facet of the problem, including epidemiology, diagnosis, treatment and complications, anesthetic considerations, prenatal care, and rare malignancies; and comes to an end by arguing main psychological concerns. In the midst of this orderly sequence fertility issues, pregnancy, and breastfeeding in women who have overcome their breast cancer are also discussed. This unique reference has been written by academic experts from different centers and diverse disciplines in a practical format. It is intended to be an ideal resource for every practitioner and specialist who manages complaints of gravid and nursing women or treats breast disorders in women of child bearing age.

Gay Life Stories Jón Ingvar Kjaran, 2019-03-27 Drawing on ethnographic encounters with self-identified gay men in Iran, this book explores the construction, enactment, and veiling and unveiling of gay identity and same-sex desire in the capital city of Tehran. The research draws on diverse interpretive, historical, online and empirical sources in order to present critical and nuanced insights into the politics of recognition and representation and the constitution of same-sex desire under the specific conditions of Iranian modernity. As it engages with accounts of the persecuted Iranian gay male subject as a victim of the barbarism of the Islamic Republic of Iran, the book addresses interpretive questions of sexuality governance in transnational contexts and attends to issues of human rights frameworks in weighing social justice and political claims made by and on behalf of sexual and gender minorities. The book thus combines empirical data with a critical consideration of the politics of same-sex desire for Iranian gay men.

The Model of Ramadan Diurnal Intermittent Fasting: Unraveling the Health Implications, volume III

Moez AlIslam Ezzat Faris, Faiza Kalam, Ahmed S. BaHammam, Meghit Boumediene Khaled, Hamdi Chtourou, Dana N. Abdelrahim, 2025-04-28 Intermittent fasting (IF) is rapidly gaining interest across scientific disciplines and also in the general community. The practice of IF is a safe and costless measure that offers health improvement and disease prevention, in particular, in the context of chronic metabolic diseases. One of the most commonly practiced models of IF at the global level is the religious form of obligatory intermittent fasting observed annually in the month of Ramadan by about 1.5 billion Muslim people. A growing body of literature accumulated during the last two decades provides evidence that observing this

one-month religious fasting, lasting between 12-17 hours a day depending on the location and season, provides metabolic and physiological benefits. The many health benefits of Ramadan Intermittent Fasting (RIF) include improvements in body weight, body composition, reducing complications of metabolic syndrome, improving lipid profile, and other cardiometabolic risk factors. Further, RIF helps improving glucose homeostasis, ameliorating inflammatory and oxidative stress markers, and modulating gene expression of various components of the anti-inflammatory and antioxidant defense systems. Despite being the most extensively studied form of IF, many gaps remain in our understanding of the versatile effects of RIF in healthy people, including athletes. Further, it is unclear how the observance of RIF affects patients with illnesses such as diabetes, cardiovascular disease, and cancer. More information is needed on the effects of RIF on different body systems and the possible epigenetic changes produced by this religious practice. A better understanding of RIF will help to optimize the practice of RIF, maximize its health benefits, and guide healthcare providers to better advise their chronically ill patients on matters related to Ramadan fasting.

XIII Mediterranean Conference on Medical and Biological Engineering and Computing 2013 Laura M. Roa Romero, 2013-10-01 The general theme of MEDICON 2013 is Research and Development of Technology for Sustainable Healthcare. This decade is being characterized by the appearance and use of emergent technologies under development. This situation has produced a tremendous impact on Medicine and Biology from which it is expected an unparalleled evolution in these disciplines towards novel concept and practices. The consequence will be a significant improvement in health care and well-fare, i.e. the shift from a reactive medicine to a preventive medicine. This shift implies that the citizen will play an important role in the healthcare delivery process, what requires a comprehensive and personalized assistance. In this context, society will meet emerging media, incorporated to all objects, capable of providing a seamless, adaptive, anticipatory, unobtrusive and pervasive assistance. The challenge will be to remove current barriers related to the lack of knowledge required to produce new opportunities for all the society, while new paradigms are created for this inclusive society to be socially and economically sustainable, and respectful with the environment. In this way, these proceedings focus on the convergence of biomedical engineering topics ranging from formalized theory through experimental science and technological development to practical clinical applications.

Operative Cranial Neurosurgical Anatomy Filippo Gagliardi, Cristian Gragnaniello, Pietro Mortini, 2018-11-07 One-of-kind textbook provides comprehensive tutorial on cranial anatomy with step-by-step text and visuals Dissection in the anatomical laboratory is a mandatory component of training for neurosurgeons. Acquisition of highly technical skills is a long and arduous task, requiring knowledge of complex surgical anatomy and basic steps for single surgical approaches. Unlike dense textbooks, Operative Cranial Neurosurgical Anatomy by Filippo Gagliardi, Cristian Gragnaniello, Pietro Mortini, and Anthony Caputy provides readers with a user-friendly tutorial on cranial approaches, clearly delineated through concise written

instructions and serial images. Essential procedural aspects are discussed in 53 chapters, starting with sections on pre-surgical training and planning, patient positioning, and basic techniques. Subsequent sections detail cranial approaches; transpetrosal approaches; endonasal, transoral, and transmaxillary procedures; vascular procedures; and ventricular shunts procedures. Surgical technique fundamentals and basic variants, including surgical anatomy and landmarks, are highlighted in 500 figures and illustrations. Key Features Summaries, graphics, and schematic drawings provide immediate access to salient information to utilize during surgical dissections and for surgical preparation. A wide spectrum of cranial procedures covered in 23 chapters – from the precaruncular approach to the medial orbit and central skull base – to surgical anatomy of the petrous bone. Diverse endonasal procedures including sublabial, transphenoidal, modified lothrop, odontoidectomy, and endoscopic endonasal transmaxillary. Vascular procedures such as middle cerebral artery bypass and internal maxillary artery bypass. This reader-friendly handbook is a must-have resource for every neurosurgical resident and an excellent refresher for all neurosurgeons. It will help residents and fellows optimize the time and quality of practical training in the cadaver lab, learn fundamental surgical techniques in cranial neurosurgery, and thoroughly prepare for cranial neurosurgical cases.

Inflammatory Myocardial Diseases ,2025-05-28 This book provides a comprehensive review of inflammatory myocardial diseases. It is organized into three sections: (1) Pathobiology of Myocardial Inflammatory Diseases; (2) Imaging for Inflammatory Myocardial Diseases; and (3) Interventions for Inflammatory Myocardial Diseases. Chapters address topics including inflammatory diseases in rheumatological patients; acute and recurrent pediatric pericarditis; clinical detection methods; imaging methods, including cardiac magnetic resonance in scleroderma; extracorporeal membrane oxygenation for fulminant myocarditis complicated with cardiogenic shock and surgical interventions. This volume is suitable for the generalist interested in cardiovascular pathology as part of undergraduate or postgraduate study and those with advanced knowledge of inflammatory myocardial diseases.
