Costi, tempi e metri cubi. Quantificare in Architettura Gian Pietro Brogiolo, Stefano Camporeale, Alexandra Chavarría Arnau, 2017-12-22 Estratto dal numero XXII della rivista «Archeologia dell'Architettura». Il volume contiene gli atti del seminario, organizzato a Padova il 28 ottobre 2016, sulla quantificazione in architettura, sulla base di tre parametri: metri cubi, tempi e costi di costruzione. Il metodo, già applicato ad edifici di età romana, soprattutto pubblici, è stato ora messo a punto anche per edifici medievali, soprattutto chiese e fortificazioni. Nell'incontro padovano ne sono stati discussi i principali problemi relativamente a computo metrico estimativo, sviluppo reale del cantiere, edilizia pluristratificata. Quando presenti, si sono poi confrontate le fonti scritte con i resti materiali conservati. Sovente approssimative quando sono letterarie e tendono a celebrare il committente, sono più vicine alla realtà se consistono in registri di cantiere e note di spesa che ci permettono di stabilire con un certo dettaglio i ritmi del cantiere in rapporto alle maestranze e ai materiali impiegati. Nel complesso la quantificazione in edilizia rappresenta un contributo importante, ma da mettere in relazione con molteplici altri aspetti, per una ricostruzione socioeconomica delle società del passato.
