Anesthesia for Genetic, Metabolic, and Dysmorphic Syndromes of Childhood Victor C. Baum, Jennifer E. O'Flaherty, 2014-12-01 This text presents the anesthetic implications of genetic, metabolic, and dysmorphic pediatric disorders in a uniform format that moves through common and uncommon manifestations in the major anatomic areas and concludes with implications for the anesthetists faced with such a case. This unique format is useful for quick look-up of information that is otherwise esoteric and difficult to find. The new edition will be completely updated and will be presented in full color for the first time, allowing for the addition of many color photographs.

Anaesthesia Databook Rosemary Mason, 2001-01-04 This is the third edition of a comprehensive book covering all aspects of perioperative and peripartum anaesthesia. Previous editions have been very well received (see reviews of the first two editions below) and this book builds on their success to be an essential purchase for all trainee and practising anaesthetists, as well as providing a valuable resource for other hospital and particularly theatre-based personnel such as surgeons, obstetricians, operating department practitioners, theatre nurses, midwives etc. The sections on medical disorders and anaesthetic problems, and on emergency conditions arising during anaesthesia or the immediate postoperative period have been expanded to include over 30 new entries and rare and unusual syndromes have been incorporated into these two main sections for ease of quick reference. The book also features a valuable list of abbreviations and a fully updated appendix containing useful addresses, telephone numbers and website details.

Ehlers-Danlos Syndrome: A Multidisciplinary Approach J.W.G. Jacobs, L.J.M. Cornelissens, M.C.

Veenhuizen,2018-08-14 Generalized hypermobility has been known since ancient times, and a clinical description of Ehlers-Danlos syndrome (EDS) is said to have first been recorded by Hippocrates in 400 BC. Hypermobility syndromes occur frequently, but the wide spectrum of possible symptoms, coupled with a relative lack of awareness and recognition, are the reason that they are frequently not recognized, or remain undiagnosed. This book is an international, multidisciplinary guide to hypermobility syndromes, and EDS in particular. It aims to create better awareness of hypermobility syndromes among health professionals, including medical specialists, and to be a guide to the management of such syndromes for patients and practitioners. It is intended for use in daily clinical practice rather than as a reference book for research or the latest developments, and has been written to be understandable for any healthcare worker or educated patient without compromise to the scientific content. The book is organized as follows: chapters on classifications and genetics are followed by chapters on individual types, organ (system) manifestations and complications, and finally ethics and therapeutic strategies, with an appendix on surgery and the precautions which should attend it. A special effort has been made to take account of the perspective of the patient; two of the editors have EDS. The book will be of interest to patients with hypermobility syndromes and their families, as well as to all those healthcare practitioners who may encounter such syndromes in the course of their work.

Ehler Danlos Syndrome, 2017 EHLER DANLOS SYNDROME: ANESTHETIC MANAGEMENT OF A RARE TYPE Introduction: Ehlers-Danlos syndrome (EDS) comprises a group of clinically and genetically heterogeneous heritable connective tissue disorders.¹ Genetic defects affecting the fibrillar collagens have been implicated in classic (type I and II), hypermobile (type III), vascular (type IV), kyphoscoliosis (type VIA) arthrochalasia (types VIIA and VIIB), and dermatosparaxis (type VIIC).^{1,2} EDS types. The dermatosparaxis type is characterized by facial gestalt, extreme skin fragility and laxity, excessive bruising, and sometimes major complications due to visceral and vascular fragility.² This case presents the huge amount of difficulties for the management of a patient with dermatosparaxis type who was proposed for surgical cleaning of the infected ulcer of the right thigh. Case report: Female patient, 27 years old, ASA III, was proposed for surgical cleaning of the infected ulcer of the right thigh. By the impossibility of placing vascular accesses, after several attempts with local infiltration and bruises, one decided for surgical cancellation and conservative treatment. Due to the extreme cutaneous fragility, there was an aggravation of the lesion during the mobilization, with need of urgent surgical debridement. The patient was positioned in dorsal decubitus, with protection of the bone prominences. It was obtained a peripheral vascular access antecubital. The non-invasive evaluation of the blood pressure was measured before the anaesthetic induction. The patient was intubated by videolaryngoscopy, with orotracheal tube number 6. The surgical intervention took 25 minutes, without intercurrents nor valuable blood losses. The patient was hemodynamically stable during the perioperative, being the positioning and transfer carefully assured, avoiding lesion of the soft tissues. Discussion: The dermatosparaxis type of EDS is a rare but severe autosomal recessive heritable connective-tissue disorder.² Careful patient positioning, as padding use, and mobilisation is advised to reduce the risk of joint luxation as well as reduction of shear forces with regard to the skin fragility.^{1, 3} Non-invasive monitoring should be performed whenever possible, although some patients are prone to bruising

and hematoma formation by repetitive non-invasive blood pressure measurements.1tOrotracheal intubation should be done carefully to diminish the risk of bleeding. Itu2019s recommended use smaller endotracheal tubes to reduce mucosal damage, andkept cuff pressure as low as possible.1,3Learning points:tEDS is challenging for the anesthetist, and there is little evidence-based knowledge. A registry for perioperative complications might help to improve safety for anesthesia and perioperative medicine in patients with EDS. tItu2019s extremely importante to make realistic risk estimation with regard to airway difficulties, bleeding complications and complication rates. Chinese Medicine and the Management of Hypermobile Ehlers-Danlos Syndrome Paula Bruno,2023-09-21 Hypermobility syndromes are more common, complex and varied than most practitioners realise. Every hypermobile patient is unique, and therefore challenging to treat using a pre-set paradigm or protocol. The hEDS population can be underserved by Western medicine and there is much that Chinese medicine can do for this community. This book is one of the first of its kind - a Chinese Medicine text focusing specifically on hypermobile Ehlers-Danlos Syndrome. Presenting existing bio-medical narratives before providing an in-depth exploration of the Chinese Medicine paradigms, this guide gives an overview of comprehensive treatment scenarios and addresses issues faced by EDS patients including pain management, psycho-emotional challenges, disruption of gut health, and chronic inflammation, including post-Lyme syndrome.
