Química básica Alejandrina Gallego Picó, 2018-10-08 El texto, básico pero con rigor, ofrece una exposición de los principios de la Química, accesible incluso para estudiantes sin apenas conocimientos de esta materia. A su parte teórica se une una completa y amplia colección de ejercicios, algunos explicados detalladamente y resueltos; y, otros, propuestos e indicada su resolución. Los autores de este libro son profesores de la UNED y han elaborado diversos materiales didácticos adaptados a la enseñanza a distancia de materias regladas y no regladas.

Química e investigación criminal Matthew E. Johll, 2008 La fascinación de la sociedad por las investigaciones criminales se refleja en la popularidad de las novelas y series de televisión de gran audiencia basadas en la resolución de crímenes y el trabajo policial. Las historias de Sherlock Holmes, las novelas de misterio de Agatha Christie, las aventuras de investigadores inolvidables como Nancy Drew, Dick Tracy, Perry Mason y Colombo, y últimamente, la exitosa serie de televisión CSI: Crime Scene Investigation, que intriga a millones de personas, son claros ejemplos. El profesor Matthew E. Johll ha encontrado en este interés por la ciencia forense una excelente oportunidad para escribir su libro Química e investigación criminal con la finalidad de atraer a los estudiantes hacia el estudio de la química. Así, basándose en casos reales de la ciencia forense y la investigación criminal, explica los principios químicos básicos de una manera clara y accesible, sin olvidar los aspectos más cuantitativos de la química.

Módulo 2. Física LÓPEZ CRESPO, JORGE, 2013-10-23 El presente texto describe y explica los principios y las leyes de la

Física que debe conocer todo aspirante a Técnico de Mantenimiento Aeromecánico como paso previo al estudio de las materias específicas. El libro está completamente adaptado a los contenidos del Módulo 2 (Física) de la parte 66 del Reglamento (CE) 2042/2003 y del Reglamento (CE) 1149/2011, por lo que resulta ideal para la obtención de la Licencia de Técnico de Mantenimiento de Aeronaves LMA B.1, ya que trata cada tema con la profundidad adecuada. Asimismo, el texto no solo es útil para las organizaciones de formación de mantenimiento parte 147 (centros 147), sino que resulta también increíblemente práctico para aquellos que deseen prepararse por cuenta propia para aprobar el examen del Módulo 2 (Física) gracias a las variadas preguntas de repaso que se incluyen al final de cada capítulo y a la batería final de 300 preguntas de tipo test. Además, incorpora útiles anexos finales. Por último, la obra está completamente ilustrada con figuras, imágenes y esquemas que facilitan la comprensión de los contenidos y sirven de valioso apoyo para la obtención de la licencia de mantenimiento. El autor, ingeniero aeronáutico por la Universidad Politécnica de Madrid, cuenta con más de diez años de experiencia en la formación de técnicos de mantenimiento aeromecánico y ha publicado, también en esta editorial, el libro Módulo 17 (Hélices).

Físico Química 2 Renée Cesar Magnetti, El presente trabajo fue elaborado a partir de los contenidos curriculares emanados de las autoridades educativas, teniendo en cuenta que la Nueva Ley de Educación Nacional (Nº: 26.206) y la Ley de Educación Provincial (Nº: 13.688) fija como uno de los principios básicos mejorar la calidad de la enseñanza. Los profesores de física y química, (obviamente también otros), sabemos que nuestro espacio curricular permite elaborar propuestas áulicas partiendo de fenómenos concretos, que estando al alcance de los alumnos, los introduce al pensamiento reflexivo y a una actitud crítica. No pretendemos, menos aún a esa edad, que los jóvenes, terminen sus estudios siendo físicos o químicos, sólo queremos lograr un “ser pensante”. Los avances intelectuales se logran mediante la investigación, el redescubrimiento y la elaboración del conocimiento significativo, para que el adolescente enfrente los hechos de la vida diaria con la seguridad de que sus aportes pueden enriquecer la problemática encarada. Para que el alumno pueda “entender e internalizar” los diferentes temas, cada capítulo se inicia a partir de cuestiones simples de hechos reales y sobre esa base, que permite la adquisición de los conceptos previos, se elabora la secuencia priorizando la resolución de cuestionarios, problemas y la realización por parte del alumno de trabajos prácticos que le permiten al joven vivenciar el fenómeno. Recordar que a esa edad se “aprende haciendo, se asimila lo que se ve y se cree cuando se hace”.

Química. Fundamentos experimentales Robert W. Parry, 1973 Este libro es una versión autorizada del célebre libro

original CHEM Study, cuya versión española se ha difundido por los Centros de Enseñanza donde se cursan estudios de nivel medio y preuniversitario. Tanto en este libro, como en el CHEM, la experimentación es el vehículo para presentar la Química, tal como es hoy en día. Los principios unificadores se desarrollan a partir de la observación experimental. Así, la Química aparece como una Ciencia y no como una masa de información. El objetivo principal de este libro es lograr fundamentalmente el hito de la Ciencia moderna: desarrollo del principio a partir de la observación.

Química. Ciencia experimental Chemical Education Material Study, 1987 El programa CHEM centra su problemática en la observación y en la experimentación y destaca la importancia de aprender a observar, dedicando más de treinta páginas a sacar todo el fruto posible de la observación que realizan unos alumnos del proceso de combustión de una vela. Se utilizan las interpretaciones teóricas según conviene, pero se insiste constantemente en que lo más importante es tener en cuenta que los hechos químicos, correspondientes a fenómenos más complicados que los hechos físicos, necesitan que el alumno reciba un adiestramiento especial para que no escapen a su percepción.
