Structural Studies, Repairs and Maintenance of Heritage Architecture XV C.A. Brebbia, V. Echarri, 2017-08-15 Comprising papers presented at the 15th International Conference on Studies, Repairs and Maintenance of Heritage Architecture this volume brings together global contributions from scientists, architects, engineers and restoration experts dealing with different aspects of heritage buildings, including the preservation of architectural heritage. The importance of retaining the built cultural heritage cannot be overemphasised. Rapid development and the inappropriate conservation techniques are threatening many built cultural heritage unique sites in different parts of the world. This current volume covers a wide range of topics related to the historical aspects and the reuse of heritage buildings, as well as technical issues on the structural integrity of different types of buildings, such as those constructed with materials as varied as iron and steel, concrete, masonry, wood or earth. Material characterisation techniques are also addressed, including non-destructive tests via computer simulation. Modern computer simulation can provide accurate results demonstrating the stress state of the building and possible failure mechanisms affecting its stability. The included papers focus on such topics as: Heritage architecture and historical aspects; Learning from the past; Surveying and monitoring; Modern (19th/20th century) heritage; Ports and coastal heritage; Heritage masonry structures; Wooden structures; New technologies and materials; Corrosion and material decay; Seismic vulnerability and retrofit; Re-use of heritage buildings; Heritage and tourism; Conservation policies; Guidelines, codes and regulations for heritage; Heritage management; Defence, Industrial and Transportation heritage; Social, cultural and economic aspects; Adaptability and accessibility; Monitoring and damage detection; Vernacular architecture.

Tierra Agua Arquitectura Maura Bernardini, Andrea Cecconi, 2021-06-01 Este libro constituye la conclusión de un trabajo desarrollado durante dos años aproximadamente, finalizado en el montaje de la exposición itinerante TIERRA AGUA ARQUITECTURA construir en tierra cruda en Italia. Aquello que emerge es un esquema actualizado sobre el empleo de la tierra cruda en Italia como material de construcción e incluye imágenes de algunas obras arquitectónicas contemporáneas europeas. Una descripción científica de las características físico-químicas y de las diversas técnicas de empleo, que nos hará

comprender los mecanismos de cohesión interna y de estabilidad de este material, introduce una exposición sintética, subdividida por regiones, del patrimonio nacional en tierra cruda, histórico y actual, existente. La recolección del material estuvo hecha en colaboración con la Asociación nacional ciudad de la tierra cruda y con el CED Terra di Casalincontrada (Chieti). La intención primordial de este trabajo es el de llevar a la luz, a través de una comunicación puntual, simple e inmediata, las técnicas de la construcción en tierra propias de la cultura y tradición italianas.

Patrimonio construido con tierra, 2007 As part of the research and promotion activities of the ICOMOS-ISCEAH (International Scientific Committee on Earthen Architectural Heritage), several members of the Mexico section present their research works. This collective work is focused in the patrimonial value and distinct characteristics of the historic earth (adobe) architectural patrimony, covering from archaeological and small vernacular structures to the great colonial buildings. Includes the participation of academics from UAM-Xochimilco and Red Iberoamericana Proterra.

Terra 2022 Leslie Rainer,Luis Fernando Guerrero Baca, Frank Matero, Lauren Meyer, 2025-04-22 Featuring a global compendium of sites, buildings, urban settlements, and cultural landscapes, this volume combines recent research with practical approaches to conservation of earthen architectural heritage. Earthen architecture is one of the oldest forms of construction and is evidenced around the globe. This volume gathers the research and presentations from Terra 2022: 13th World Congress on Earthen Architectural Heritage, which brought together in Santa Fe, New Mexico, 350 conservation professionals and practitioners from fifty-two countries. Seventy richly illustrated papers, fifty-seven in English and thirteen in Spanish, address a range of conservation issues. Abstracts are provided in both English and Spanish for each paper. Themes covered include advances in research, strategies for archaeological sites, community-based care and decision-making, cultural landscapes, decorated surfaces, education, historic and modern buildings, conservation history, risks and vulnerabilities, and traditional materials and practices. Sections that draw on symposia held at the congress spotlight two recent architectural heritage initiatives: the rehabilitation of an urban settlement by the AlUla Old Town and Oasis Conservation Project in Saudi Arabia, and the conservation and management of eight monumental enclosure complexes at the Hopewell Ceremonial Earthworks in Ohio.

Rammed Earth Conservation C. Mileto, F. Vegas, V. Cristini, 2012-05-31 Includes a free CD containing the full contents of the book. The rammed earth technique, in all its variants, is widespread all over the world. This enormously prevalent building technique harbours an important richness of varieties both in application and in materials used. Interventions on

historical rammed earth buildings have also been carried out in all the geographical areas where these structures are found. This historical heritage has undergone diverse forms of reconstruction, conservation, repair, substitution and/or structural consolidation. The different criteria applied require different techniques, materials or forms of intervention. The results of the interventions have also been manifold, both in terms of the impact on the building and the technical and material durability. With a view to these issues, this book deals with rammed earth architecture and its restoration, and, in a more general sense, with the construction techniques and restoration of all earthen structures. Rammed Earth Conservation will be a valuable source of information for academics and professionals in the fields of Civil Engineering, Construction and Building Engineering and Architecture.

Building Back Better Michal Lyons, Theo Schilderman, Camillo Boano, 2010 This book asks whether large-scale reconstruction can be participatory and developmental; can rebuilding be truly people-centred, contributing to breaking the cycle of poverty and dependence? Can reconstruction reduce people's vulnerability to disasters and other shocks?
