The Encyclopedia of Film Composers Thomas S. Hischak, 2015-04-16 For more than a century, original music has been composed for the cinema. From the early days when live music accompanied silent films to the present in which a composer can draw upon a full orchestra or a lone synthesizer to embody a composition, music has been an integral element of most films. By the late 1930s, movie studios had established music departments, and some of the greatest names in film music emerged during Hollywood's Golden Age, including Alfred Newman, Max Steiner, Dimitri Tiomkin, and Bernard Herrmann. Over the decades, other creators of screen music offered additional memorable scores, and some composers—such as Henry Mancini, Randy Newman, and John Williams—have become household names. The Encyclopedia of Film Composers features entries on more than 250 movie composers from around the world. It not only provides facts about these artists but also explains what makes each composer notable and discusses his or her music in detail. Each entry includes Biographical material Important dates Career highlights Analysis of the composer's musical style Complete list of movie credits This book brings recognition to the many men and women who have written music for movies over the past one hundred years. In addition to composers from the United States and Great Britain, artists from dozens of other countries are also represented. A rich resource of movie music history, The Encyclopedia of Film Composers will be of interest to fans of cinema in general as well as those who want to learn more about the many talented individuals who have created memorable scores.

Foundations in Music Bibliography Richard D Green, 2012-12-06 As more and more music literature is published each year, librarians, scholars, and bibliographers are turning to music bibliography to retain control over the flood of information. Based on the Conference of Music Bibliography, this timely book provides vital information on the most important aspects of the scholarly practice of music bibliography. Foundations in Music Bibliography provides librarians with great insight into bibliographic issues they face every day including bibliographic control of primary and secondary sources, the emergence of enumerative and analytical bibliography, bibliographic instruction, and bibliographic lacunae. Foundations in Music Bibliography features the perspectives of prominent scholars and music librarians on contemporary issues in music bibliography often encountered by music librarians. It offers practical insights and includes chapters on teaching students how to use microcomputer programs to search music bibliographies, organizing a graduate course in music bibliography, and researching film music bibliography. The book also provides a supplement to Steven D. Westcott's A Comprehensive

Bibliography of Music for Film and Television. This insightful volume demonstrates the many ways that bibliography relates music publications to each other and endows grander meaning to individual scholarly observations. Some of the fascinating topics covered by Foundations in Music Bibliography include: the history of thematic catalogs indexing Gregorian chant manuscripts general principles of bibliographic instruction analyses of Debussy discographies musical ephemera and their importance in various types of musicological research bibliographical lacunae (i.e. lack of access to visual sources, failure to control primary sources, and lack of communication with the rest of the performing arts) Foundations in Music Bibliography shows librarians how bibliography can be used to help music students and researchers find the information they need among the innumerable available sources. It is an indispensable asset to the shelves of all music reference libraries that wish to provide their patrons with the latest bibliographic tools.
