Geometría Analítica Agustín Anfossi, 1977

Geometry by Its Transformations Christopher Baltus, 2025-02-07 This textbook combines the history of synthetic geometry, centered on the years 1800-1855, with a theorem-proof exposition of the geometry developed in those years. The book starts with the background needed from Euclid's Elements, followed by chapters on transformations, including dilation (similitude), homology, homogeneous coordinates, projective geometry, inversion, the Möbius transformation, and transformation geometry as in French schoolbooks of 1910. Projective geometry is presented by tracing its path through the work of J. V. Poncelet, J. Steiner, and K. G. C. von Staudt. Extensive exercises are included, many from the period studied. The prerequisites for approaching this course are knowledge of high school geometry and enthusiasm for mathematical demonstration. This textbook is ideal for a college geometry course, for self-study, or as preparation for the study of modern geometry.

Graphing techniques are emphasized, including a discussion of polar co-ordinates, parametric equations, and conics using polar co-ordinates.

Álgebra lineal y geometría Manuel Castellet, Irene Llerena, 1991 El objetivo de este libro es hacer una exposición actual de la geometría afín y euclídea desde el punto de vista del álgebra lineal. Para ello se presentan de una forma clara y simple los métodos básicos del álgebra lineal, para aplicarlos posteriormente al estudio de los espacios afines y euclídeos, y a la clasificación de afinidades, desplazamientos y semejanzas. El libro es fruto de la experiencia de varios años impartiendo asignaturas de Geometría y Álgebra lineal de los primeros cursos de Matemáticas y de otras Facultades. El lenguaje es llano, de forma que el texto tanto puede servir al profesor como al alumno que estudia por su cuenta. Al final de cada capítulo se incluyen unas notas históricas y una lista de ejercicios no triviales para resolver. También se da como complemento una serie de ejercicios sencillos para programar.

Geometry and Complex Variables S. Coen, 2017-11-22 This reference presents the proceedings of an international meeting on the occasion of the University of Bologna's ninth centennial-highlighting the latest developments in the field of geometry and complex variables and new results in the areas of algebraic geometry, differential geometry, and analytic functions of one or several complex variables. Building upon the rich tradition of the University of Bologna's great mathematics teachers, this volume contains new studies on the history of mathematics, including the algebraic geometry work of F. Enriques, B. Levi, and B. Segre ... complex function theory ideas of L. Fantappie, B. Levi, S. Pincherle, and G. Vitali ... series theory and logarithm theory contributions of P. Mengoli and S. Pincherle ... and much more. Additionally, the book lists all the University of Bologna's mathematics professors-from 1860 to 1940-with precise indications of each course year by year. Including survey papers on combinatorics, complex analysis, and complex algebraic geometry inspired by Bologna's mathematicians and current advances, Geometry and Complex Variables illustrates the classic works and ideas in the field and their influence on today's research.
