## Various Authors

**The Reviewer's Guide to Quantitative Methods in the Social Sciences** Gregory R. Hancock, Ralph O. Mueller, Laura M. Stapleton, 2010-04-26 Designed for reviewers of research manuscripts and proposals in the social and behavioral sciences, and beyond, this title includes chapters that address traditional and emerging quantitative methods of data analysis.

**Understanding Traumatic Brain Injury** Harvey Levin, David Shum, Raymond Chan, 2014-01-28 This timely book reports recent progress in research on traumatic brain injury (TBI) by leading investigators encompassing translational and clinical studies. The text covers epidemiology, pathophysiology, brain imaging, cognition, behavioral sequelae, and clinical trials of innovative treatments, including new approaches to rehabilitation. The range of TBI mechanisms represented in this cutting-edge book includes closed head trauma and blast-related injury, and the spectrum of TBI severity. Chapters offer a developmental perspective, including the effects of TBI on cognitive development in children and outcome studies in adults. Contributors from various countries provide a global perspective on this worldwide health problem. The editors have synthesized the contents in a concluding chapter. Researchers and clinicians will find this volume to be an informative, authoritative reference for current TBI research.

**The Oxford Handbook of Language and Social Psychology** Thomas Holtgraves, 2014 The Oxford Handbook of Language and Social Psychology is a unique and innovative compilation of research that lies at the intersection of language and social psychology. Contributors address the role of social processes in language, the linguistic underpinnings of social psychological processes, the creation of meaning, and the important role played by language and social psychology in applied topics.

**The Treatment of Eating Disorders** Carlos M. Grilo, James E. Mitchell, 2011-03-18 Leading international experts on eating disorders describe the most effective treatments and explain how to implement them, including coverage of psychosocial, family-based, medical, and nutritional therapies.

*Community Bushfire Safety* John Handmer, Katharine Haynes, 2008 Community Bushfire Safety brings together in one accessible and comprehensive volume the results of the most important community safety research being undertaken within the Australian Bushfire Cooperative Research Centre (CRC). Using perspectives deriving from social science, economics and law, it supports the increasing emphasis on community safety and the vital role it has to play in Australian bushfire management. The wide range of issues covered in this volume include research into gender and vulnerability; the law and its

implications for public/fire agency interactions; the arsonists ra.

*Acceptance and Commitment Therapy and Mindfulness for Psychosis* Eric M. J. Morris, Louise C. Johns, Joseph E. Oliver, 2013-02-25 Emerging from cognitive behavioural traditions, mindfulness and acceptance-based therapies hold promise as new evidence-based approaches for helping people distressed by the symptoms of psychosis. These therapies emphasise changing the relationship with unusual and troublesome experiences through cultivating experiential openness, awareness, and engagement in actions based on personal values. In this volume, leading international researchers and clinicians describe the major treatment models and research background of Acceptance and Commitment Therapy (ACT) and Person-Based Cognitive Therapy (PBCT), as well as the use of mindfulness, in individual and group therapeutic contexts. The book contains discrete chapters on developing experiential interventions for voices and paranoia, conducting assessment and case formulation, and a discussion of ways to work with spirituality from a metacognitive standpoint. Further chapters provide details of how clients view their experiences of ACT and PBCT, as well as offering clear protocols based on clinical practice. This practical and informative book will be of use to clinicians and researchers interested in understanding and implementing ACT and mindfulness interventions for people with psychosis.

*Lexical Bootstrapping* Dagmar Bittner, Nadja Ruhlig, 2013-04-30 The internal bootstraps for establishing the grammatical system of a human language build an essential topic in language acquisition research. The discussion of the last 20 years came up with the Lexical Bootstrapping Hypothesis which assigns lexical development the role of the central bootstrapping process. The volume presents work from different theoretical perspectives evaluating the strength and weaknesses of this hypothesis.

**The Acquisition of Relative Clauses** Evan Kidd, 2011-11-23 Explaining the acquisition and processing of relative clauses has long challenged psycholinguistics researchers. The current volume presents a collection of chapters that consider the acquisition of relative clauses with a particular focus on function, typology, and language processing. A diverse range of theoretical approaches and languages are brought to bear on the acquisition of this construction type, making the volume unique in its coverage. The volume will appeal to students and scholars whose interest lies in the acquisition and processing of syntax with a particular focus on complex sentences in crosslinguistic and functionalist perspective.

**Current perspectives on the mechanisms of auditory hallucinations in clinical and non-clinical populations** Johanna C. Badcock, Frank Larøi, Paul Allen, Kelly M. Diederer, 2014-03-07 There has been a recent surge of interest in auditory hallucinations (AH) in schizophrenia compared to those experienced by non-clinical (i.e. healthy) individuals. This interest stems in no small part from a keen awareness of the fact that progress in developing more effective treatments for AH in psychosis has been seriously hampered by our limited understanding of the cognitive and biological mechanisms involved. The prevailing notion that AH in clinical and non-clinical populations share the same features and underlying

mechanisms - the continuum hypothesis - has been seriously challenged by a growing list of differences, as well as similarities, between these groups. At the phenomenological level this is exemplified in the highly negative content of AH in patients and the markedly earlier age of onset of AH in non-patients. Similarly, several recent studies point to significant differences in cognition, language lateralization and, possibly, dopamine function between these groups. These findings have important implications for the design of future studies, and raise considerable doubt about the adequacy of modelling the functional mechanisms of clinical AH on the basis of non-clinical populations. In short, the time seems ripe to re-evaluate the continuum hypothesis and provide a forum to present alternative perspectives on the functional pathways leading to AH in clinical and non-clinical groups. Such a forum is also timely in view of the renewed interest in AH in other (non-schizophrenic) clinical groups, again examining similarities and differences between such groups. Preliminary studies, for instance, have shown that AH in certain clinical populations (e.g. bipolar disorder, borderline personality disorder, dissociative disorder) share similar phenomenological features with AH in schizophrenia. However, the implications of such findings are not fully understood, and studies have not adequately examined potential differences between AH in these groups. The goal of this Frontiers Research Topic, therefore, is take the opportunity to bring together research exploring differences and similarities in mechanisms of AH in clinical and non-clinical groups and to stimulate the development of new explanatory models which explicitly link the phenomenological characteristics of AH with underlying mechanisms.

**Applied Topics in Health Psychology** Marie Louise Caltabiano, Lina Ricciardelli, 2012-08-14 This selection of in-depth, critical and comprehensive chapters on topical issues in applied health psychology features the work of key researchers and practitioners in the Australasian health system and deals with both theoretical and methodological aspects of the subject. The first health psychology text aimed specifically at regional postgraduate trainees Covers an array of topics and issues and focuses on applied aspects of clinical health and health promotion Includes both specialized topics and new frontiers of research Contextualizes health psychology teaching and learning for Australasian students

*Evidence-Based Outcome Research* Arthur M. Nezu, Christine Maguth Nezu, 2008 This edited volume provides both conceptual and practical information for conducting and evaluating evidence-based outcome studies. It encompasses psychotherapy research for traditional mental health disorders (eg. depression, anxiety), as well as psychosocial-based treatments provided to medical patient populations to have impact either on the disease process itself (pain, cardiovascular risk) or to improve the quality of life of such individuals. This is a hands-on book, whose major emphasis is on the practical nuts-and-bolts implementation of psychosocial-based RCTs from conception to completion.

**Decision Making in Complex Environments** Jan Noyes, Malcolm Cook, Yvonne Masakowshi, 2017-09-18 Many complex systems in civil and military operations are highly automated with the intention of supporting human performance in difficult cognitive tasks. The complex systems can involve teams or individuals working on real-time supervisory control, command or

information management tasks where a number of constraints must be satisfied. *Decision Making in Complex Environments* addresses the role of the human, the technology and the processes in complex socio-technical and technological systems. The aim of the book is to apply a multi-disciplinary perspective to the examination of the human factors in complex decision making. It contains more than 30 contributions on key subjects such as military human factors, team decision making issues, situation awareness, and technology support. In addition to the major application area of military human factors there are chapters on business, medical, governmental and aeronautical decision making. The book provides a unique blend of expertise from psychology, human factors, industry, commercial environments, the military, computer science, organizational psychology and training that should be valuable to academics and practitioners alike.

**Relating Events Narrative Set** Various Authors, 2020-12-29 This volume represents the culmination of an extensive research project that studied the development of linguistic form/function relations in narrative discourse. It is unique in the extent of data which it analyzes--more than 250 texts from children and adults speaking five different languages--and in its crosslinguistic, typological focus. It is the first book to address the issue of how the structural properties and rhetorical preferences of different native languages--English, German, Spanish, Hebrew, and Turkish--impinge on narrative abilities across different phases of development. The work of Berman and Slobin and their colleagues provides insight into the interplay between shared, possibly universal, patterns in the developing ability to create well-constructed, globally organized narratives among preschoolers from three years of age compared with school children and adults, contrasted against the impact of typological and rhetorical features of particular native languages on how speakers express these abilities in the process of relating events in narrative. This volume also makes a special contribution to the field of language acquisition and development by providing detailed analyses of how linguistic forms come to be used in the service of narrative functions, such as the expression of temporal relations of simultaneity and retrospection, perspective-taking on events, and textual connectivity. To present this information, the authors prepared in-depth analyses of a wide range of linguistic systems, including tense-aspect marking, passive and middle voice, locative and directional predications, connectivity markers, null subjects, and relative clause constructions. In contrast to most work in the field of language acquisition, this book focuses on developments in the use of these early forms in extended discourse--beyond the initial phase of early language development.

**Relating Events in Narrative: Typological and contextual perspectives** Sven Strömqvist, Ludo Th Verhoeven, 2004 This follow-up volume to the 'frog-story studies' book, 'Relating Events in Narrative: A Cross-Linguistic Developmental Study' (1994) is divided into two main parts. Part one focuses on crosslinguistic perspectives whilst part two offers a variety of theoretical and methodological perspectives.

**Relating Events in Narrative, Volume 2** Ludo Verhoeven, Sven Strömqvist, 2004-02-13 *Relating Events in Narrative, Volume 2: Typological and Contextual Perspectives* edited by Sven Strömqvist and Ludo Verhoeven, is the much anticipated

follow-up volume to Ruth Berman and Dan Slobin's successful frog-story studies book, *Relating Events in Narrative: A Crosslinguistic Developmental Study* (1994). Working closely with Ruth Berman and Dan Slobin, the new editors have brought together a wide range of scholars who, inspired by the 1994 book, have all used Mercer Mayer's *Frog, Where Are You?* as a basis for their research. The new book, which is divided into two parts, features a broad linguistic and cultural diversity. Contributions focusing on crosslinguistic perspectives make up the first part of the book. This part is concluded by Dan Slobin with an analysis and overview discussion of factors of linguistic typology in frog-story research. The second part offers a variety of theoretical and methodological perspectives, all dealing with contextual variation of narrative construction in a wide sense: variation across medium/modality (speech, writing, signing), genre variation (the specific frog story narrative compared to other genres), frog story narrations from the perspective of theory of mind, and from the perspective of bilingualism and second language acquisition. Several of the contributions to the new book manuscript also deal with developmental perspectives, but, in distinction to the 1994 book, that is not the only focused issue. The second part is initiated by Ruth Berman with an analysis of the role of context in developing narrative abilities. The new book represents a rich overview and illustration of recent advances in theoretical and methodological approaches to the crosslinguistic study of narrative discourse. A red thread throughout the book is that crosslinguistic variation is not merely a matter of variation in form, but also in content and aspects of cognition. A recurrent perspective on language and thought is that of Dan Slobin's theory of thinking for speaking, an approach to cognitive consequences of linguistic diversity. The book ends with an epilogue by Herbert Clark, *Variations on a Ranarian Theme*.

**Selected Proceedings of the Symposium on Inference for Stochastic Processes** Ishwar V. Basawa, 2001

Madness and Creativity: Yes, No or Maybe? Anna Abraham, 2015-11-23 The pervasive idea that madness and creativity are intricately linked is one that holds tremendous fascination for both scientists and the general public alike. Although this view was at first largely driven by anecdotal evidence showcasing the manifestation of mental illness in individuals who exhibited extraordinary levels of creativity in various spheres of life, it initiated a strong impetus to empirically investigate the association between mental health and creativity. A variety of approaches (and combinations of approaches) have been adopted to address this association including clinical, personality, psychometric, behavioral, cognitive, historiometric and neuroscientific. Despite the ever accumulating body of evidence over the past six decades investigating this link, what is lacking is a comprehensive overview of the disparate findings from these different approaches that will enable us to address the question of whether there is an empirically founded relationship between creativity and mental illness. And if such a link does exist, what is the nature of this association? The purpose of this Research Topic was to motivate theorists and researchers to answer this question (or at least attempt to do so) given the available evidence thus far. The themes of interest that were open to exploration in view of this topic included: (a) Which mental disorders are positively associated with

creativity? (b) Which mental disorders are negatively associated with creativity? (c) The dynamics of information processing biases (positive versus negative) associated with psychiatric and high-risk populations (d) Theories regarding the madness-creativity link (e) Personality-based studies on creativity (f) Creativity, mental illness and the brain (g) Genes and creativity (h) How can studies on neurological populations inform this debate? (i) What are the areas of impact with regard to real world applications and practice? (j) Historical timeline of this question (k) Evolutionary perspectives on the madness-creativity link (l) Methodological problems associated with this field (m) Philosophical issues to bear in mind when investigating this domain (n) The usefulness of the “troubled genius” concept

The invitation to contribute was open to all interested academics regardless of whether they were seasoned explorers within this field of study or just beginning to get their feet wet in its murky waters. As a result of adopting this inclusive approach, the contributions showcase a wide variety of perspectives from academic departments and institutions the world over. What is most encouraging is that so many were willing to openly take on the challenge of tackling this difficult question head on. We hope future discussions that follow through as a result of this collective effort will prove to be just as fruitful.

**Steroids** Sergej Ostojic, 2012-11-21 *Steroids - From Physiology to Clinical Medicine* covers contemporary basic science on steroids research, along with steroids practical application in clinical medicine. We start by describing physiological and pathophysiological roles of steroids, with reference to production and action of gonadal steroids, role of steroid sulfonation, sex specific and steroids-dependent mechanism of hippocampal function, and the hydroxysteroid dehydrogenases for the modulation of tissue glucocorticoid availability. We then covered different aspects of steroids application in clinical environment, such as endocrine function after ovarian transplantation, diagnostic significance of salivary assessment of androgens, drawbacks of steroids use in sport, analysis of serum steroid hormone profiles in patients with adrenocortical tumors, and correlation between salivary and serum cortisol responses after alcohol intake. In response to the need to address novel and valuable information on steroids science and medicine, we sincerely hope that this book will enable readers to comprehend this fast-growing and exciting scientific discipline.

**Social Identity at Work** S. Alexander Haslam, 2003 First Published in 2003. Routledge is an imprint of Taylor & Francis, an informa company.

*The Oxford Handbook of the History of Psychology: Global Perspectives* David B. Baker, 2012 The science and practice of psychology has evolved around the world on different trajectories and timelines, yet with a convergence on the recognition of the need for a human science that can confront the challenges facing the world today. Few would argue that the standard narrative of the history of psychology has emphasized European and American traditions over others, but in today's global culture, there is a greater need in psychology for international understanding. This volume describes the historical development of psychology in countries throughout the world. Contributors provide narratives that examine the political and

socioeconomic forces that have shaped their nations' psychologies. Each unique story adds another element to our understanding of the history of psychology. The chapters in this volume remind us that there are unique contexts and circumstances that influence the ways in which the science and practice of psychology are assimilated into our daily lives. Making these contexts and circumstances explicit through historical research and writing provides some promise of greater international insight, as well as a better understanding of the human condition.
