Complex, Intelligent, and Software Intensive Systems Leonard Barolli, Farookh Khadeer Hussain, Makoto Ikeda, 2019-06-20 This book presents scientific interactions between the three interwoven and challenging areas of research and development of future ICT-enabled applications: software, complex systems and intelligent systems. Software intensive systems heavily interact with other systems, sensors, actuators, and devices, as well as other software systems and users. More and more domains involve software intensive systems, e.g. automotive, telecommunication systems, embedded systems in general, industrial automation systems and business applications. Moreover, web services offer a new platform for enabling software intensive systems. Complex systems research focuses on understanding overall systems rather than their components. Such systems are characterized by the changing environments in which they act, and they evolve and adapt through internal and external dynamic interactions. The development of intelligent systems and agents features the use of ontologies, and their logical foundations provide a fruitful impulse for both software intensive systems and complex systems. Research in the field of intelligent systems, robotics, neuroscience, artificial intelligence, and cognitive sciences is a vital factor in the future development and innovation of software intensive and complex systems.

Neural Advances in Processing Nonlinear Dynamic Signals Anna Esposito, Marcos Faundez-Zanuy, Francesco Carlo Morabito, Eros Pasero, 2018-07-21 This book proposes neural networks algorithms and advanced machine learning techniques for processing nonlinear dynamic signals such as audio, speech, financial signals, feedback loops, waveform generation, filtering, equalization, signals from arrays of sensors, and perturbations in the automatic control of industrial production processes. Art and Economics in the City Caterina Benincasa, Gianfranco Neri, Michele Trimarchi, 2019-06-12 Emerging forms of alternative economic frameworks are changing the structure of society, redefining the relationship between centre and periphery, and the social dynamics in the urban fabric. In this context, the arts can play a crucial role in formulating a concept of complex and plural citizenship: This economic, social and cultural paradigm has the potential to overcome the conventional isolation of the arts and culture in ivory towers, and thereby to gradually make the urban fabric more fertile. This volume faces such sensitive issues by collating contributions from various disciplines: Economists, sociologists, urbanists, architects and creative artists offer a broad and deep assessment of urban dynamics and their visions for the years to come.

Sustainability of the Agri-food System: Strategies and Performances Bernardo De Gennaro, Gianluca Nardone, 2014-11-01 The 2013 annual conference of the Italian Society of Agricultural Economics (SIDEA) has been held in the attractive scenario of the city of Lecce under the organization of three different Universities of the Apulia Region (Università degli Studi di Bari, Università degli Studi di Foggia and Università del Salento). The scientific theme of the 50th SIDEA Conference has been "Sustainability of the agri-food system: Strategies and Performances" (Sostenibilità del Sistema Agroalimentare: strategie e performance). With such a topic, the SIDEA intended to cope with the challenges coming from a growing demand of food in a world where critical natural resources such as water, energy and land are becoming increasingly scarce and climate change is posing credible threats. The agri-food system and the broader bio-based economy are, in fact, human activities where the classic dimensions of sustainability (ecological, economic and social) are gaining a striking weight often showing evidence of

frictions. Despite a significant growth in food production over the past century, today one of the most important challenges facing agro-food system is how to feed a growing population.
