Иллюстрированный военно-технический словарь Л.Л. Нелюбин, 2013-03 5-язычный военно-технический иллюстрированный словарь в бумажном виде давно представляет из себя большую букинистическую редкость. Словарь построен в классическом стиле иллюстрированных словарей - со сплошной нумерацией терминов на рисунках и их переводом под соответствующими номерами на 5 языков. Словарь охватывает практически все сферы техники и военного дела. Содержит более 200 тем, более 10 000 терминов.

Construire en acier Helmut C. Schultz, Werner Sobek, Karl J. Habermann, 2003-01-01 L'avènement au XIXe siècle du matériau acier a fondamentalement contribué à l'évolution de l'architecture, en ouvrant des possibilités jusqu'alors insoupçonnées dans le domaine des portées et des hauteurs de bâtiments. De nos jours, la technique de construction incite à réaliser des performances toujours plus remarquables et à rechercher de nouvelles formes de bâtiments : le matériau acier a affranchi la construction de presque toutes les limites. Les auteurs de Construire en acier se sont proposés de centrer leur ouvrage autour du thème de l'unité de la conception et de la construction, et de présenter clairement les assemblages appropriés à ce type de construction, en fonction du matériau, du traitement, de la fabrication et du montage de l'ouvrage. Largement illustré, ce livre a l'ambition d'être à la fois un manuel et un traité sur la construction en acier. Il offre aux architectes et aux ingénieurs ainsi qu'aux étudiants une référence précieuse sur leur travail de concepteurs ou de constructeurs.

Printmaking as Therapy Lucy Mueller White, 2002 The author explores the therapeutic advantages of printmaking. She also describes its roots outside art therapy. Relief printing, intaglio, planographic or surface processes, and stencilling are all covered in detail, with many ideas for incorporating them into art therapy sessions.

The Three Dimensions of Archaeology Hans Kamermans, Wieke de Neef, Chiara Piccoli, 2016-03-31 This volume brings together presentations from two sessions organized for the XVII World UISPP Conference: The scientific value of 3D archaeology, and Detecting the Landscape(s).

Immunologie. 4eme Edition Jean-Pierre Revillard, 2001-10-11 Synthèse moderne entre immunologie fondamentale et

immunopathologie, ce livre comporte un ensemble de chapitres consacrés aux applications de l'immunologie dans le domaine des cancers, des maladies infectieuses, des vaccinations et de la pathologie dysimmunitaire. Le fil conducteur est celui de l'évolution moléculaire et de l'adaptation réciproque des microorganismes et de leurs hôtes animaux, des relations structure-activité des molécules de l'immunité naturelle et de l'immunité spécifique. Chaque chapitre d'immunologie générale est éclairé d'un regard médical qui extrait les concepts les plus importants pour la physiopathologie et la thérapeutique. Cette quatrième édition, entièrement remaniée et mise à jour, intègre toutes les avancées les plus récentes, tout en conservant les qualités didactiques des premières éditions. De plus, un nouveau chapitre d'exercices d'application (tutorials) permet au lecteur de tester ses capacités d'utilisation des connaissances théoriques. L'ouvrage s'adresse aux professeurs et étudiants des 1er et 2e cycles en médecine, sciences de la vie, pharmacie et médecine vétérinaire.

Semiotics Roland Posner, Klaus Robering, Thomas Albert Sebeok, 1997 This series of HANDBOOKS OF LINGUISTICS AND COMMUNICATION SCIENCE is designed to illuminate a field which not only includes general linguistics and the study of linguistics as applied to specific languages, but also covers those more recent areas which have developed from the increasing body of research into the manifold forms of communicative action and interaction. For classic linguistics there appears to be a need for a review of the state of the art which will provide a reference base for the rapid advances in research undertaken from a variety of theoretical standpoints, while in the more recent branches of communication science the handbooks will give researchers both an overview and orientation. To attain these objectives, the series will aim for a standard comparable to that of the leading handbooks in other disciplines, and to this end will strive for comprehensiveness, theoretical explicitness, reliable documentation of data and findings, and up-to-date methodology. The editors, both of the series and of the individual volumes, and the individual contributors, are committed to this aim. The languages of publication are English, German, and French. The main aim of the series is to provide an appropriate account of the state of the art in the various areas of linguistics and communication science covered by each of the various handbooks; however no inflexible pre-set limits will be imposed on the scope of each volume. The series is open-ended, and can thus take account of further developments in the field. This conception, coupled with the necessity of allowing adequate time for each volume to be prepared with the necessary care, means that there is no set time-table for the publication of the whole series. Each volume will be a self-contained work, complete in itself. The order in which the handbooks are published does not imply any rank ordering, but is determined by the way in which the series is organized; the editor of the whole series enlist a competent editor for each individual volume. Once the principal editor for a volume has been found, he or she then has a completely free hand in the choice of co-editors and contributors. The editors plan each volume independently of the others, being governed only by general formal principles. The series editor only intervene where questions of delineation between individual volumes are concerned. It is felt that this (modus operandi) is best suited to achieving the objectives of the series, namely to give a

competent account of the present state of knowledge and of the perception of the problems in the area covered by each volume.

Dictionary of Building and Civil Engineering, 2013-12-20 In the last few decades civil engineering has undergone substantial technological change which has, naturally, been reflected in the terminology employed in the industry. Efforts are now being made in many countries to bring about a systematization and unification of technical terminology in general, and that of civil engineering in particular. The publication of a multilingual dictionary of civil engineering terms has been necessitated by the expansion of international cooperation and information exchange in this field, as well as by the lack of suitable updated bilingual dictionaries. This Dictionary contains some 14.000 English terms together with their German, French, Dutch and Russian equivalents, which are used in the main branches of civil engineering and relate to the basic principles of structural design and calculations (the elasticity theory, strength of materials, soil mechanics and other allied technical disciplines); to buildings and installations, structures and their parts, building materials and prefabrications, civil engineering technology and practice, building and road construction machines, construction site equipment, housing equipment and fittings (including modern systems of air conditioning); as well as to hydrotechnical and irrigation constructions. The Dictionary also includes a limited number of basic technical expressions and terms relating to allied disciplines such as architecture and town planning, as well as airfield, railway and underground construction. The Dictionary does not list trade names of building materials, parts and machines or the names of chemical compounds. Nor does it give adverbial, adjective or verbal terms.

River Flow 2020 Wim Uijttewaalt, Mário J. Franca, Daniel Valero, Victor Chavarrias, Clàudia Ylla Arbós, Ralph Schielen, Alessandra Crosato, 2020-08-27 Rivers form one of the lifelines in our society by providing essential services such as availability of fresh water, navigation, energy, ecosystem services, and flood conveyance. Because of this essential role, mankind has interfered continuously in order to benefit most and at the same time avoid adverse consequences such as flood risk and droughts. This has resulted in often highly engineered rivers with a narrow set of functions. In the last decades rivers are increasingly considered in a more holistic manner as a system with a multitude of interdependent processes. River research and engineering has therefore added to the river fundamentals also themes like ecohydraulics, consequences of climate change, and urbanisation. River Flow 2020 contains the contributions presented at the 10th conference on Fluvial Hydraulics, River Flow 2020, organised under the auspices of the Committee on Fluvial Hydraulics of the International Association for Hydro-Environment Engineering and Research (IAHR). What should have been a lively physical gathering of

researchers, students and practitioners, was converted into an online event as the COVID-19 pandemic hindered international travelling and large gatherings of people. Nevertheless, the fluvial hydraulics community showed their interest and to be very much alive with a high number of participations for such event. Since its first edition in 2002, in Louvain-la-Neuve, this series of conferences has found a large and loyal audience in the river research and engineering community while being also attractive to the new researchers and young professionals. This is highlighted by the large number of contributions applying for the Coleman award for young researchers, and also by the number of applications and attendants to the Master Classes which are aimed at young researchers and students. River Flow 2020 aims to provide an updated overview of the ongoing research in this wide range of topics, and contains five major themes which are focus of research in the fluvial environment: river fundamentals, the digital river, the healthy river, extreme events and rivers under pressure. Other highlights of River Flow 2020 include the substantial number of interdisciplinary subthemes and sessions of special interest. The contributions will therefore be of interest to academics in hydraulics, hydrology and environmental engineering as well as practitioners that would like to be updated about the newest findings and hot themes in river research and engineering.

Migration and Climate Change Jamila Alaktif,Stéphane Callens,2020-07-16 This book aims to provide a better understanding of how human cultures interact with climate change over an extended period of time. It is an analysis of the past and present, ranging from the first human migration to contemporary organizational management using an approach developed by Michel Foucault, defined as: the research, the practice, the experience, by which the subject operates on themselves the transformations necessary in order to have access to the truth. This book consists of two parts. The first part focuses on climate change and the substantial effects it had on the first human cultures. The second part explores the role of organizations and the development of new frameworks for action in more recent times of anthropogenic climate change.

Jacques Rivette Mary M. Wiles,2012-01-19 As a pioneer of the French New Wave, Jacques Rivette was one of a group of directors who permanently altered the world's perception of cinema by taking the camera out of the studios and into the streets. His films, including *Paris nous appartient*, *Out 1: Noli me tangere*, *Céline et Julie vont en bateau*--*Phantom Ladies Over Paris*, *La belle noiseuse*, *Secret défense*, and *Va savoir* are extraordinary combinations of intellectual depth, playfulness, and sensuous beauty. In this study of Rivette, Mary M. Wiles provides a thorough account of the director's career from the burgeoning French New Wave to the present day, focusing on the theatricality of Rivette's films and his explorations of the relationship between cinema and fine arts such as painting, literature, music, and dance. Wiles also explores the intellectual interests that shaped Rivette's approach to film, including Sartre's existentialism, Barthes's structuralism, and the radical

theater of the 1960s. The volume concludes with Wiles's insightful interview with Rivette.

The Construction of Gothic Cathedrals John Fitchen, 1981 Describes the process of erecting the great cathedrals in the Gothic era. This text explains the building equipment and falsework needed, the actual operations undertaken, and the sequence of these operations as far as they can be deduced from manuscript illuminations and pictorial representations.
