Tadeu, A.

Energy and Sustainability VIII Tadeu, A.,2019-09-10 Originating from the 8th edition of the Energy and Sustainability conference, the research included in this volume contribute to the increasing amount of interest in renewable energy resources and the search for maintainable energy policies. Energy production and distribution need to respond to the modern world's dependency on conventional fuels.

Energy and the Social Sciences Hans H. Landsberg,John J. Schanz, Jr.,Sam H. Schurr,Grant P. Thompson,2016-03-31 Originally published in 1974, this report dwells on the problems of meeting global energy demands and the time, effort and knowledge needed to research new energy methods. With rising costs, the uncertainty of supply from the Middle East and concern over the environmental impact of energy products, Energy and the Social Sciences outlines the intense need for well-designed research. This title will be of interest to students of Environmental Studies.

Energy Poverty, Practice, and Policy Catherine Butler,2022-07-15 This Open Access book examines the implications of welfare policy for energy poverty and engages with key conceptual debates at the forefront of energy demand research. Academic work on energy poverty has rarely been brought into conversation with practice-theory-based approaches to energy use and sustainability. This book reveals how novel insights can be made visible through combining these different ways of thinking about energy demand issues. It presents a distinctive approach to energy poverty that places inequalities at the heart of debates about the advancing energy intensity of contemporary societies.

Community Energy and Sustainable Energy Transitions Vanesa Castán Broto,2024-05-17 This open access book engages with the difficulties of delivering community energy in practice, building on practical experiences in Ethiopia, Malawi, and Mozambique. In these countries, where many people lack access to electricity, community energy is an alternative to advance universal energy access. This book argues that, besides providing access, community energy is essential for achieving justice and resilience in sustainable energy transitions. Community energy combines off-grid infrastructures with innovative forms of governance to incorporate the perspectives of beneficiaries in the generation and distribution of electricity. Community energy has multiple benefits for communities, such as facilitating the adoption of renewable technologies, providing energy access where it is lacking, and building resilience. They also offer societal benefits beyond beneficiary communities, such as providing additional capacity to existing grids, delivering off-grid services where the grid is

absent, and bridging on-grid and off-grid systems. Despite its promises, however, the adoption of community energy has been slow. This book presents a feminist-informed perspective on community energy to advance energy justice that puts disadvantaged communities at the centre of sustainable energy transitions. It also explores the room for manoeuvre within existing regulatory systems, supply chains, and delivery systems to facilitate its development. By engaging with existing experiences in community energy, the book demonstrates the potential of communities to gain control over their energy needs and resources and argues for the need to develop a wide range of transdisciplinary skills among policymakers, technicians and communities to deliver a just energy transition.

Energy Transitions and Social Psychology Paul Upham,Paula Bögel,Katinka Johansen,2019-02-01 This book explains how social psychological concepts can be closely integrated with sociotechnical perspectives of energy transitions. It shows the value of actor-centred analysis that acknowledges the role of individual-level processes within their wider contexts of energy supply and use. In this way, the book connects social psychological and sociological frames of analysis, preserving the value of both, to provide multi-level, analytically extended accounts of energy transitions processes. Sociotechnical thinking is about the interactions of people and technology, including the rules, regulations and institutions involved. Such perspectives help to identify the many forms of path dependency that can make change difficult. Human behaviour plays a strong role in maintaining these path dependencies, but it can also introduce change. This book advocates a deliberately interdisciplinary research agenda that recognises the value of social psychological perspectives when seeking to create new pathways for energy supply and use. At the same time, it also demonstrates the value of sociotechnical perspectives for energy-related social psychology. *Energy Transitions and Social Psychology* will be of great interest to students and scholars of energy transitions, environmental and energy psychology, sustainable development and innovation studies, as well as students and scholars of environment and energy more generally.

Advancing Energy Policy Chris Foulds,Rosie Robison,2018-08-23 This open access book advocates for the Social Sciences and Humanities to be more involved in energy policymaking. It forms part of the European platform for energy-related Social Sciences and Humanities' activities, and works on the premise that crossing disciplines is essential. All of its contributions are highly interdisciplinary, with each chapter grounded in at least three different Social Sciences and Humanities disciplines. These varying perspectives come together to cover an array of issues relevant to the energy transition, including: energy poverty, justice, political ecology, governance, behaviours, imaginaries, systems approaches, modelling, as well as the particular challenges faced by interdisciplinary work. As a whole, the book presents new ideas for future energy policy, particularly at the European level. It is a valuable resource for energy researchers interested in interdisciplinary and society-relevant perspectives. Those working outside the Social Sciences and Humanities will find this

book an accessible way of learning more about how these subjects can constructively contribute to energy policy.

Handbook on Energy Justice Stefan Bouzarovski, Sara Fuller, Tony G. Reames, 2023-05-09 Offering a unique and critical perspective on energy justice, this Handbook delves into an emerging field of inquiry encapsulating multiple strands of scholarship on energy systems. Covering key topics including generation, transmission, distribution and demand, it explores fundamental questions surrounding policy, climate change, security and social movements.

Living with Energy Poverty Paola Velasco Herrejón, Breffní Lennon, Niall P. Dunphy, 2023-12-01 Living with Energy Poverty: Perspectives from the Global North and South expands our collective understanding of energy poverty and deepens our recognition of the phenomenon by engaging with the lived experiences of energy-poor households across different contexts. Understanding the lived experience of energy poverty is an essential component in the design of any effort to alleviate what is fundamentally a deep-rooted, multi-faceted, wickedly complex problem. This requires a nuanced understanding of the causal factors and the research methods that can respond to the flexible spatial and temporal nature of the condition, as well as its wellbeing and justice implications. Drawing together the expertise and connectedness of authors from the Global South and North, this book presents novel approaches to understanding the often hidden forms of domestic energy deprivation. Case studies from 20 countries provide critical perspectives on this phenomenon while analysing the policy practices, government strategy, and sustainability implications of divergent manifestations. The book takes a multidimensional perspective, challenging the bias towards energy production and service provision, which often do not align with the aspirations and realities of energy households across global contexts, thus facilitating a useful dialogue on the nature of energy poverty. The book is a timely source for policymakers, practitioners, and scholars seeking fresh, diverse insights into the everyday reality of energy poverty and wanting to better understand the challenges a people-centred, just energy transition can present. The Energy Trilemma in the Baltic Sea Region Michael Kalis, 2024-11-22 The Energy Trilemma in the Baltic Sea Region provides insight into the energy trilemma in the Baltic Sea Region. Energy Trilemma in the Baltic Sea Region has undergone significant transformation in the last number of years. Energy actors in the region are struggling to reconcile new questions of energy security following the COVID-19 pandemic and the invasion of Ukraine with net-zero objectives and a cost-of-living crisis. Balancing these concerns is essential to resolving the “energy trilemma”: the dilemma that emerges for

policy-makers and regulators seeking to balance energy security, equity, and environmental concerns in pursuit of a wholly sustainable energy system. This volume draws together a range of perspectives from scholars of the Baltic Sea Region seeking to understand the manifestations and impact of these systemic regional changes. In considering previously underexamined studies on the energy trilemma and in providing new perspectives by framing the trilemma in times of crisis, this book provides new conceptual and empirical insight into a rapidly changing energy region at the heart of both European energy policy and the current energy crisis. This volume will be of great interest to students and scholars of energy politics, energy law and policy, energy transitions, and Baltic studies more broadly.

Research Handbook on Energy and Society Webb, Janette, Wade, Faye, Tingey, Margaret, 2021-12-10 This incisive Research Handbook examines the relationship between energy and society, across both macro- and micro-scales, in the context of the climate crisis. Featuring an extensive examination of current research in the field from fifty expert international contributors, it offers important insights into the inter-connections between the globally organised fossil fuel energy system and the changing structures of society.

The Emerald Handbook of Sustainable Energy Transition and Social Justice Julius Omokhudu Irene, Bridget Nneka Irene, Kingsley Obi Omeihe, Regina Frank, 2025-09-08 The Emerald Handbook of Sustainable Energy Transition fosters a more profound understanding of research and discourse on sustainability across the Global South deconstructs the current thinking.

The Role of Coal in a Sustainable Energy Mix for India Mritunjyot Mohanty, Runa Sarkar, 2023-09-13 As India switches away from a coal-based to a more sustainable energy use pattern, which pathway will it adopt? What is the nature of challenges that it will face, and who will be affected? Who will gain? This volume offers insights into the steps and challenges involved in this transition and addresses some urgent questions about the possible pathways for India's renewable energy generation. Including contributions from researchers, policymakers, and practitioners, it draws on different disciplines, ranging from science and technology to economics and sociology, and situates the issue of low carbon transition within an interdisciplinary framework. India has committed to gradual decarbonisation of its economy. This book takes this as its starting point and uses a wide-angle lens, incorporating macro as well as micro views, to understand the possible next steps as well as trade-offs that will inevitably be posed. It incorporates the perspectives of all stakeholders ranging from central and state governments, public and private sector firms, on the one hand, to individuals and local communities, on the other, to explore their role in the transition, their interests, and how these will change and evolve. This timely volume will be of interest to students and researchers of environmental studies, development studies, environmental economics, political studies, and Asian studies. It will also be useful to academics, practitioners, and policymakers working on issues related to climate change, sustainable development, energy policy and economics, and public policy.

Tackling Long-Term Global Energy Problems Daniel Spreng,Thomas Flüeler,David L. Goldblatt,Jürg

Minsch,2012-01-03 This book makes a case for a multidisciplinary and transdisciplinary approach to energy research—one that brings more of the social sciences to bear. Featuring eight studies from across the spectrum of the social sciences, each applying multiple disciplines to one or more energy-related problems, the book demonstrates the strong analytical and policy-making potential of such a broadened perspective. Case studies include: energy transitions of households in developing countries, the ‘curse of oil’, politics and visions for renewables, economics and ethics in emissions trading, and carbon capture and storage.

The Oxford Handbook of Energy Politics Kathleen J. Hancock,Juliann Emmons Allison,2020-12-02 The global, regional, and local energy landscape has changed dramatically in the twenty-first century. Many factors have affected what we know about energy: a consensus among scientists on climate change and related support for renewable energy, evolving energy and resource extraction technologies, growing resource demand in the developing world, new regional and global energy

governance actors, new major fossil fuel discoveries on land and underwater in states that have previously been under-resourced, rising interest in corporate social responsibility in energy companies, and the need for energy justice. The Oxford Handbook of Energy Politics synthesizes the diverse literature on these topics to provide a foundational resource for teaching and research on critical energy issues in international relations and comparative politics. Through chapters authored by both scholars and practitioners, the Handbook further develops the energy politics scholarship and community, and generates sophisticated new work that will benefit all who work on energy issues.

Gender and Energy Transition Katarzyna Iwińska,Xymena Bukowska,2021-11-01 This volume takes an ecofeminist perspective in analysing societal changes related to energy transition, with a focus on Upper Silesia in Europe, following the closure of coal-mining industries in the region. It provides both a macro and micro view of how energy transition in societies built around an energy industry can lead to major shifts in societal and familial dynamics, and how women locate themselves in this transition period affecting the economy as well as social and environmental structures and values. Densely populated Upper Silesia in southern Poland, with one of the longest histories of industrialization, extractivism and environmental degradation in Europe, can be considered as a microcosm of regions that have undergone such changes due to energy transition. The traces of telling socio-economic changes, as well as the tangle of modernity and conservatism, are both clearly visible in the local region and society. The book documents the Silesian changes and highlights the female perspective: their culture, identities, as well as empowerment and the agency. The paradigm of feminist and masculinity studies helps in presenting the complexity and the challenges of the just energy transition. This is a topical volume, given that many regions of the world are undergoing similar changes, and is an interesting read for decision-makers, policy experts, environmentalists, as well social scientists who study issues related to sustainability and environmental/societal challenges in energy transition. Chapter 1 is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com.

Sociology of Interdisciplinarity Antti Silvast,Chris Foulds,2021-12-03 This Open Access book builds upon Science and Technology Studies (STS) and provides a detailed examination of how large-scale energy research projects have been conceived, and with what consequences for those involved in interdisciplinary research, which has been advocated as the zenith of research practice for many years, quite often in direct response to questions that cannot be answered (or even preliminarily investigated) by disciplines working separately. It produces fresh insights into the lived experiences and actual contents of interdisciplinarity, rather than simply commentating on how it is being explicitly advocated. We present empirical studies on large-scale energy research projects from the United Kingdom, Norway, and Finland. The book presents a new framework, the Sociology of Interdisciplinarity, which unpacks interdisciplinary research in practice. This book will be of interest to all those interested in well-functioning interdisciplinary research systems and the dynamics of doing

interdisciplinarity, including real ground-level experiences and institutional interdependencies.

Sustainable Energy Transformations, Power and Politics Sharlissa Moore, 2018-09-03 This book analyses energy transitions and the opportunities and challenges for building sustainable energy systems to improve human capabilities while protecting the environment. Sufficient and secure energy supply is critical to human thriving and socioeconomic development. Yet energy systems are also implicated in the most pressing socio-environmental challenges of our time - climate change, air pollution, and water and land use. This book examines what is arguably the most ambitious vision for a renewable energy based system worldwide. This vision, often called Desertec, is for a regional electricity system supplying North Africa, Europe, and the Middle East with sustainable and affordable power. The behemoth plan would entail building dozens of large-scale solar and wind power plants mostly in North Africa, interconnecting the fragmented transmission infrastructure of 38 Mediterranean countries, and linking North Africa to the European Union (EU) through undersea transmission cables. Within the Mediterranean, the book focuses on Morocco, which is one of the most advanced developing countries in renewable energy scale-up, to understand its motivations for building renewable energy and the effects on sustainable development. The book therefore takes a unique multi-scalar approach to understanding the social and political aspects of energy transitions, weaving together the views of villagers living near Morocco's first solar energy zone with the perspectives of national decision-makers in Morocco with the views of European policymakers and major transnational energy companies in the Mediterranean region. This book will be of great interest to students, scholars and policymakers interested in energy transitions, sustainable and renewable energy, Mediterranean politics, sustainable development and environment and sustainability more generally.
