**Actividad motora** Ignacio González Burgos,David González Tapia,Nallely Vázquez Hernández,2021-11-02 De acuerdo con la Organización Mundial de la Salud, más de 1 000 millones de personas padecen algún tipo de discapacidad. En México, de acuerdo con el último censo del Instituto Nacional de Estadística, Geografía e Informática (INEGI), la prevalencia se acerca a los ocho millones de personas. La discapacidad motora es polifacética y se podría decir que las personas que la padecen enfrentan cuatro retos principales: la limitación per se, el autoconcepto que ello genera, los prejuicios socioculturales y las barreras físicas. Easter Seal proclama que «lo peor de una discapacidad es que la gente la ve antes de verte a ti». Más aún, las dificultades que entraña la discapacidad impactan en la postura mental al grado de que personajes con una portentosa autoestima como Muhammad Ali, declaraba: «Hubo periodos de frustración y depresión, los cuales tuve que combatir tan vigorosamente como a cualquiera de los oponentes que enfrenté en el ring». Sin embargo, la buena actitud ayuda: Óscar Pistorius narraba que «mi madre nos decía Carl, ponte tus zapatos. Óscar, ponte tus prótesis, entonces crecí pensando no que tenía una discapacidad, sino que tenía un par de zapatos diferentes». Stephen Hawking proponía: «Mi consejo a otras personas con discapacidad sería concentrarse en cosas que su discapacidad no les impide hacer bien, y no lamentar las cosas con las que interfiere. No seas incapacitado tanto en espíritu como físicamente». Sin embargo, no todas las personas con discapacidad son afortunadas de contar con apoyo. De hecho, la enorme mayoría carece de los soportes más elementales, como decía Stella Young: «Mi discapacidad no existe porque uso una silla de ruedas, sino porque el entorno más

amplio no es accesible». El objetivo central de Actividad motora: un acercamiento integral es aportar información científica sustentada en la experiencia de sus autores a diferentes niveles de su quehacer profesional, para orientar las acciones en favor de mejorar las condiciones de vida de las personas que padecen algún tipo de discapacidad psicomotriz. Así, y de acuerdo con el propio Stephen Hawking, que postulaba: «Me he dado cuenta de que incluso las personas que dicen que todo está predestinado y que no podemos hacer nada para cambiar nuestro destino, siguen mirando a ambos lados antes de cruzar la calle», el desarrollo de investigaciones científicas se encumbra como la vía que ha de favorecer el mejoramiento de la calidad de vida de las personas con discapacidad, iurge!, porque, de acuerdo con Christy Brown, «la esperanza que se demora es tormento para el corazón».
