Geopedology Joseph Alfred Zinck, Graciela Metternicht, Héctor Francisco del Valle, Marcos Angelini, 2023-01-30 This updated and revised second edition brings geopedology issues into the current context. This new edition extends the work on popular topics such as digital soil mapping, GIS and landscape mapping, and it also gives valuable insight with up-to-date theoretical discussions and new application with relevant case studies. This textbook offers a proven approach for reliable mapping of soil-landscape relationships to derive information for policy, planning and management at scales ranging from local to regional. Filled with didactic elements such as case studies, visual aids (maps, charts and figures), questions and answers, the book is of interest to geohazard studies, land use conflict analysis, land use planning, land degradation

assessment, and land suitability analysis. Soil is a vital resource for society at large and an important determinant of the economic status of nations. The intensification of natural disasters and the increased land use competition for food and energy have raised awareness of the relevant role the pedosphere plays in natural and anthropogenic environments. Recent papers and global initiatives show a renewed interest in soil research and its applications for improved planning and management of this fragile and finite resource.

The Amenity Migrants Laurence A. G. Moss, 2006 This book describes and analyses the challenges and opportunities of amenity migration to mountain areas and its management, and offers related recommendations. The book's chapters cover the subject through case studies at international, regional and local levels, along with overarching themes such as environmental sustainability and equity, mountain recreation users, housing, and spiritual motivation. Crucial issues addressed are the relationship of amenity migration to tourism and migration motivated by economic gain. Part I (chapters 1-3) describes and analyses key aspects of the amenity migration phenomenon that arch across specific place experiences, while chapters 4-20 are organized geographically, covering amenity migration in the Americas (part II), in Europe (part III), and in the Asia Pacific region (part IV). Chapter 21 concludes by bringing all the information together and focusing on the future of amenity-led migration. The book has a subject index.

Fire and Climatic Change in Temperate Ecosystems of the Western Americas Thomas T. Veblen, 2003 Brings together research conducted in western North and South America, areas of a great deal of collaborative work on the influence of people and climate change on fire regimes. In order to give perspective to patterns of change over time, it emphasizes the integration of paleoecological studies with studies of modern ecosystems. Data from a range of spatial scales, from individual plants to communities and ecosystems to landscape and regional levels, are included.

The Conquest of the Desert Carolyn R. Larson, 2020-12-15 Winner of the 2021 Thomas McGann Book Prize from the Rocky Mountain Council for Latin American Studies For more than one hundred years, the Conquest of the Desert (1878-1885) has marked Argentina's historical passage between eras, standing at the gateway to the nation's Golden Age of progress, modernity, and--most contentiously--national whiteness and the invisibilization of Indigenous peoples. This traditional narrative has deeply influenced the ways in which many Argentines understand their nation's history, its laws and policies, and its cultural heritage. As such, the Conquest has shaped debates about the role of Indigenous peoples within

Argentina in the past and present. The Conquest of the Desert brings together scholars from across disciplines to offer an interdisciplinary examination of the Conquest and its legacies. This collection explores issues of settler colonialism, Indigenous-state relations, genocide, borderlands, and Indigenous cultures and land rights through essays that reexamine one of Argentina's most important historical periods.

Beyond restoration ecology: social perspectives in Latin America and the Caribbean Eliane Ceccon & Daniel Roberto Pérez, 2017-09-05 This book invites us to reflect on the restoration of terrestrial ecosystems in the context of a region whose identity is still under construction, Latin America and the Caribbean, immersed in a social, economic, ecological and political crisis, whose roots originate historically and politically in colonialism and in the prevailing model of capital accumulation. For the first time, insights and practical experiences on restoration are gathered from most Latin-American and Caribbean countries. Furthermore, this book offers a social approach to restoration, which will likely become preponderant in this field and in this region. The authors claim that a Latin-American knowledge of restoration is under construction and that this discipline can be a significant tool to empower local populations, which might, in turn, lead to a collective action of change. Case studies from 11 countries of the region were compiled, involving multiple voices that emerge beyond generalist principles and with a bottom-up approach. The main idea of the book is to open a debate about the identity of ecological and social restoration in this region. This book is targeted to restoration specialists, volunteers, environmental managers, researchers, politicians and NGOs working on the complexity of socioecological restoration in a region with unavoidable social problems. It is intended for people with similar concerns to those of the chapters' authors. This work tries to integrate a movement on the rise, almost silent, born with its own narratives of successes and failures that do not hinder its development. Finally, the determination and commitment of Latin-American and Caribbean social actors to restore not only natural values but also social, ethical and cultural ones is remarkable.

Brown Trout Javier Lobón-Cerviá, Nuria Sanz, 2017-10-13 *Brown Trout: Biology, Ecology and Management* A comprehensive guide to the most current research, history, genetics and ecology of the brown trout including challenging environmental problems The brown trout is an iconic species across its natural European distribution and has been introduced throughout the World. *Brown Trout* offers a comprehensive review of the scientific information and current

research on this major fish species. While the brown trout is the most sought species by anglers, its introduction to various waters around the world is causing serious environmental problems. At the same time, introduction of exogenous brown trout lineages threatens conservation of native gene pools of populations in many regions. The authors summarize the important aspects of the brown trout's life history and ecology and focus on the impact caused by the species. The text explores potential management strategies in order to maintain numerous damaged populations within its natural distributional range and to ameliorate its impacts in exotic environments. The authors include information on a wide-range of topics such as recent updates in population genetics, evolutionary history, reproductive traits and early ontogeny, life history plasticity in anadromous brown trout and life history of the adfluvial brown trout and much more. This vital resource: Contains the latest research on the biology and ecology of brown trout Includes information on phylogeography, genetics, population dynamics and stock management Spotlights the brown trout's introduction to regions around the world and the serious environmental impacts Offers a comprehensive review of conservation and management techniques Written for salmonid scientists and researchers, fishery and environmental managers, and students of population genetics, ecology and population dynamics, Brown Trout explores the most recent findings on the history, ecology and sustainability of this much-researched species.

Agroecology of Edible Weeds and Non-Crop Plants Roland Ebel, Fabian Menalled, 2024-09-19 Agroecology of Edible Weeds and Non-Crops: Ecological and Socio-Economic Potential of the Associated Biodiversity is the first book to move beyond the ethnobotanical aspect of under-utilized non crops to explore how to optimize their potential. Those interested in increasing the diversity of the farming landscape and food systems by means of edible non-crop plants have access to a plethora of information on the ethnobotany of these species. Yet little to no information exists on the agroecological requirements and potential benefits of underutilized edible non-crop plants in the context of sustainable farming systems. This book fills that knowledge gap from identifying edible weeds and non-crop plants, to exploring the ways these plants can be used to economically improve nutrition. With case studies of edible weeds and non-crop plants from around the world, including Europe and North America, in urban as well as rural settings, the book highlights the global opportunities provided by these plants. Agroecology of Edible Weeds and Non-Crops includes much needed information for identifying, maintaining and benefitting from these plant species. It is ideal for agricultural professionals, educators, researchers, and students - Evaluates ecological processes underpinning the abundance and diversity of edible non-crop plants - Assesses ecological benefits of these species within agroecosystems - Identifies socioeconomic barriers and incentives in exploiting consumable agricultural biodiversity - Highlights real-world insights through case studies

Biodiversity Loss and Conservation in Fragmented Forest Landscapes Adrian C. Newton, 2007-01-01 This book is the result of an international collaborative research effort focusing on the tropical montane forests of Mexico and the temperate rain forests of southern South America. The over-all aim of the research was to investigate the impact of human

activity on the key processes influencing biodiversity in fragmented forest landscapes, and to use the research results to develop practical tools for evaluating land use decisions, thereby indicating how sustainable forest management might be achieved in practice.

South American Sauropodomorph Dinosaurs Alejandro Otero,José L. Carballido,Diego Pol,2022-04-25 Sauropodomorpha Huene 1932 is one of the most successful groups of dinosaurs, including the most abundant and diverse herbivorous forms with a worldwide record, extending from the late Triassic to the late Cretaceous. Sauropodomorphs comprise a diverse assemblage of early forms (traditionally called "prosauropods") and the well-established clade Sauropoda Marsh 1878. Early sauropodomorphs were small to medium sized forms, with long necks and reduced skulls, mostly bipeds and omnivores and were abundant in continental environments in the Late Triassic and Early Jurassic. With more than 150 valid species and a worldwide distribution, Sauropoda includes the dominant herbivorous dinosaurs, from the Middle Jurassic to the Late Cretaceous. Its unique body plan, characterized by gigantic size, graviportal locomotion, long necks and tails, and reduced skulls, made this group an undisputed icon in popular culture since the 19th century. In South America, the sauropodomorph record is particularly rich and abundant, and many species have shed light to understand important milestones in the evolutionary history of this group of dinosaurs. The origin of Sauropodomorpha, the transition to Sauropoda, and the diversification of its most successful evolutionary lineages are largely exemplified by the South American fossil record. In this contribution, we synthesize the diversity of sauropodomorphs from South America, including data on their geographic and stratigraphic provenance, phylogenetics, paleobiology, taphonomy and behaviour, underscoring their significance within the context of sauropodomorph evolution.

Mycorrhizal Fungi in South America Mónica A. Lugo,Marcela C. Pagano,2022-10-27 In order to feed the world, global

agriculture will have to double food production by 2050. As a result, the use of soils with fertilizers and pesticides in agronomic ecosystems will increase, taking into account the sustainability of these systems and also the provision of food security. Thus, soil ecosystems, their health, and their quality are directly involved in sustainable agronomical practices, and it is important to recognize the important role of soil microbial communities such as mycorrhizal fungi, their biodiversity, interactions, and functioning. Soil ecosystems are under the threat of biodiversity loss due to an increase of cultivated areas and agronomic exploitation intensity. Also, changes in land use alter the structure and function of ecosystems where biodiversity is vital in the ecosystem. Soils are a major aid in food production in all terrestrial ecosystems; however, this means they are also involved in gas emission and global warming. Thus, in agronomic ecosystems, several mitigation practices have been proposed to promote the increase of carbon soil stock, and the reduction of warming gas emission from soils. In South America, most of the rural population depends economically on agriculture and usually works in family units. New, organic, safe, and sustainable agro-forestry practices must be applied to support local communities and countries to achieve hunger eradication, rural poverty reduction, and sustainable development. This book compiles new information for mycorrhizal occurrence in natural and anthropic environments in South America. It includes new reports of mycorrhizal fungi diversity along different mycorrhizal types and their effect on plant communities, plant invasions, the use of mycorrhizal fungi for ecological and sustainable studies, management programs of natural and agroecosystems, and forestry and food-secure production. This book fills the gaps in biodiversity knowledge, management and safe food production of mycorrhizas. It should be a valuable help to researchers, professors and students, to aid in use of mycorrhizal fungi while also focusing on their biodiversity, sustainable safe food production, and conservation perspectives.

The Future of Agricultural Landscapes, Part I, 2020-10-27 Advances in Ecological Research, Volume 63, the latest release in this ongoing series includes specific chapters on Tropical Ecosystems in the 21st Century. Chapters in this volume cover topics such as Landscape-scale expansion of agroecology to enhance natural pest control: a systematic review and Ecosystem services and the resilience of agricultural landscapes - Provides information that relates to a thorough understanding of the field of ecology - Deals with topical and important reviews on the physiologies, populations and communities of plants and animals

Sustainable Development Research and Practice in Mexico and Selected Latin American Countries Walter Leal Filho, Ricardo Noyola-Cherpitel, Pedro Medellín-Milán, Valeria Ruiz Vargas, 2017-11-27 This book provides an essential overview of sustainable development research in Mexico. It discusses the empirical research methods and findings, as well as practical initiatives and projects being pursued in Mexico and other countries in the region. Although a number of Mexican universities are now conducting high-quality research on matters related to sustainable development, there are few publications that offer a multidisciplinary overview of research efforts for a broader audience. This book addresses that gap

in the literature, providing researchers at Mexican universities – including those from other countries working in Mexico – with an opportunity to present their work, i.e. curriculum innovations, empirical work, activities, case studies, and practical projects. As such, it fosters the exchange of information, ideas and experiences, successful initiatives and best practices.
