Critical Mass R. Rajaraman,2023-07-18 In a critical discussion of India's nuclear doctrine and its components of no first use and credible minimum deterrence, R. Rajaraman argues that, contrary to fears expressed in the media and the literature, the effectiveness of the deterrent is not reduced if China has thermonuclear bombs while India does not. Or if, as sometimes reported in the media, Pakistan has a few more warheads than India does. What matters is India having enough surviving nuclear weapons to launch a Second Strike on the adversary that inflicted 'Unacceptable Damage'. In order to lift the veil of irrational fear and unnecessary opacity surrounding this area, the actual damage caused by a nuclear explosion and its radiation fallout is described in a transparent manner. On nuclear energy, Rajaraman offers a detailed assessment of the Indian government's ambitious reactor programme, including a discussion of the India- US Nuclear Deal, the Nuclear Liability Law and their impact. On the global stage, he also covers measures to secure nuclear materials to prevent terrorism. The efforts include the FMCT negotiations, the Obama Summit and the NTI Index. Critical Mass thus offers a unique perspective on nuclear developments in India, covering both civil and military affairs. Written in a lucid manner such that it is accessible to a layperson, the book is illustrated with photographs and with anecdotes of the author's own experiences in the field. It succeeds in its admirable aim of decoding India's nuclear policy in a manner that enables the reader to form their own judgement on strategic matters.

Atomic Bomb: The Story of the Manhattan Project Bruce Cameron Reed,2015-06-01 This volume, prepared by an acknowledged expert on the Manhattan Project, gives a concise, fast-paced account of all major aspects of the project at a level accessible to an undergraduate college or advanced high-school student familiar with some basic concepts of energy, atomic structure, and isotopes. The text describes the underlying scientific discoveries that made nuclear weapons possible, how the project was organized, the daunting challenges faced and overcome in obtaining fissile uranium and plutonium, and

in designing workable bombs, the dramatic Trinity test carried out in the desert of southern New Mexico in July 1945, and the bombings of Hiroshima and Nagasaki.

Chemistry: The Central Science Theodore L. Brown, H. Eugene LeMay Jr., Bruce E. Bursten, Catherine Murphy, Patrick Woodward, Steven Langford, Darius Sagatys, Adrian George, 2013-10-04 If you think you know the Brown, LeMay Bursten Chemistry text, think again. In response to market request, we have created the third Australian edition of the US bestseller, Chemistry: The Central Science. An extensive revision has taken this text to new heights! Triple checked for scientific accuracy and consistency, this edition is a more seamless and cohesive product, yet retains the clarity, innovative pedagogy, functional problem-solving and visuals of the previous version. And with a more traditional and logical organisation of the Organic Chemistry content, this comprehensive text is the source of all the information and practice problems students are likely to need for conceptual understanding, development of problem solving skills, reference and test preparation.

The Role and Control of Weapons in the 1990s Frank Barnaby, 2021-05-30 This book, first published in 1992, examines defence issues as the twentieth century drew to a close. With the end of the Cold War, many of the threats to European security, such as the threat of nuclear war, disappeared. New ones, however, were emerging. The rise of nationalism, the spread of weapons of mass destruction to politically unstable countries, the increase in world population, the debt crisis – all these contributed to security problems that needed to be resolved. The book assesses the possibilities for future European defence and the role that the United States would play in it: will it be prepared to stay in Europe under European leadership, or must it dominate? It also considers the capabilities offered by new military technology and the need for control of weapons of mass destruction.

Nuclear Energy and Nuclear Weapon Proliferation Stockholm International Peace Research Institute, 2020-11-19 In mid-1980 a second conference for the review of the Non-Proliferation Treaty (NPT) would take place in Geneva. Given the importance of preventing, or at least slowing down, nuclear weapon proliferation, this conference would be a crucial event in the field of arms control and disarmament. For many countries the technical and economic barriers to proliferation had disappeared, and the only remaining barriers were political. In an attempt to contribute to the discussions at the NPT Review Conference, SIPRI assembled a group of experts from a number of countries to discuss the technical aspects of the control of

fissionable materials in non-military applications. The meeting took place in Stockholm, 12-16 October 1978. Originally published in 1979, this book on nuclear energy and nuclear weapon proliferation contains the papers presented at the symposium and reflects the discussions at the meeting.

Weapons of Mass Destruction Britannica Educational Publishing, 2011-11-01 With their potential to wreak massive or total devastation, nuclear, chemical, and biological weapons have dramatically escalated the stakes of war. As stockpiles of such weapons continue to grow around the world, especially in the years since the Second World War, countries have recognized the need to check their powers. This detailed volume examines various weapons of mass destruction and the science behind them, their effects on conflict, and the various arms control treaties and agreements that have been introduced to help curb the possibility of overwhelming loss.

Physics and Technology for Future Presidents Richard A. Muller, 2010-04-12 Physics for future world leaders Physics and Technology for Future Presidents contains the essential physics that students need in order to understand today's core science and technology issues, and to become the next generation of world leaders. From the physics of energy to climate change, and from spy technology to quantum computers, this is the only textbook to focus on the modern physics affecting the decisions of political leaders and CEOs and, consequently, the lives of every citizen. How practical are alternative energy sources? Can satellites really read license plates from space? What is the quantum physics behind iPods and supermarket scanners? And how much should we fear a terrorist nuke? This lively book empowers students possessing any level of scientific background with the tools they need to make informed decisions and to argue their views persuasively with anyone—expert or otherwise. Based on Richard Muller's renowned course at Berkeley, the book explores critical physics topics: energy and power, atoms and heat, gravity and space, nuclei and radioactivity, chain reactions and atomic bombs, electricity and magnetism, waves, light, invisible light, climate change, quantum physics, and relativity. Muller engages readers through many intriguing examples, helpful facts to remember, a fun-to-read text, and an emphasis on real-world problems rather than mathematical computation. He includes chapter summaries, essay and discussion questions, Internet research topics, and handy tips for instructors to make the classroom experience more rewarding. Accessible and

entertaining, Physics and Technology for Future Presidents gives students the scientific fluency they need to become well-rounded leaders in a world driven by science and technology. Leading universities that have adopted this book include: Harvard Purdue Rice University University of Chicago Sarah Lawrence College Notre Dame Wellesley Wesleyan University of Colorado Northwestern Washington University in St. Louis University of Illinois - Urbana-Champaign Fordham University of Miami George Washington University Some images inside the book are unavailable due to digital copyright restrictions.

Critical Mass Carter Hydrick, 2016-08-01 On May 19, 1945, eleven days after the surrender of Nazi Germany in Europe, a U-boat was escorted into Portsmouth Naval Yard, New Hampshire. News reporters covering the surrender of U-234 were ordered, contrary to all previous and later U-boat surrender procedures, to keep their distance from crew members and passengers of U-234, on threat of being shot by the attending Marine guards. Why the tight security? Buried in the nose of the specially-built mammoth boat, sealed in cylinders "lined with gold," was 1,120 pounds of enriched uranium labeled "U235" the fissile material from which atom bombs are made. Critical Mass documents how these Nazi bomb components were then used by the Manhattan Project to complete both the uranium bomb dropped on Hiroshima and the plutonium bomb dropped on Nagasaki, to defeat the Japanese and win World War Two and global domination in the modern age.
