[Evolution - Wikipedia](#) The scientific theory of evolution by natural selection was conceived independently by two British naturalists, Charles Darwin and Alfred Russel Wallace, in the mid-19th century as an explanation for why organisms are adapted to their physical and biological environments. *Evolution News - SciTechDaily* Aug 10, 2025 · Evolution is the scientific theory that explains how life on Earth has changed over time through processes such as natural selection, genetic drift, mutation, and gene flow. It describes the gradual development of species from common ancestors, shaping the incredible diversity of life seen today. *What is evolution? | Definition of evolution - YourGenome* In biology, evolution is the change in the characteristics of a species over several generations and relies on the process of natural selection. The theory of evolution is based on the idea that all species are related and gradually change over time. **An introduction to evolution** Evolution helps us to understand the living world around us, as well as its history. Biological evolution is not simply a matter of change over time. **Evolution - Definition, Types, Advantages, Examples** Nov 13, 2024 · Evolution is the process by which species change over time through the gradual accumulation of genetic variations, driven by mechanisms like natural selection, genetic drift, and mutation, leading to the development of new traits or species. [Evolution | Learn Science at Scitable - Nature](#) Evolution is a process that results in changes in the genetic content of a population over time. There are two general classes of evolutionary change: microevolution and macroevolution. [EVOLUTION Definition & Meaning - Merriam-Webster](#) Evolution is a process of continuous branching and diversification from common trunks.
