The Semitic Languages Robert Hetzron, 1997 The Semitic Languages presents a unique, comprehensive survey of individual languages or language clusters from their origins in antiquity to their present-day forms. The Semitic family occupies a position of great historical and linguistic significance: the spoken and written languages of the Phoenicians, Hebrews and Arabs spread throughout Asia and northern and central Africa; the Old Semitic civilizations in turn contributed significantly to European culture; and modern Hebrew, modern literary Arabic, Amharic, and Tigrinya have become their nations' official languages. The book is divided into three parts and each chapter presents a self-contained article, written by a recognized expert in the field. * I. General Issues: providing an introduction to the grammatical traditions, subgrouping and writing systems of this language family. * II. Old Semitic Languages * III. Modern Semitic Languages Parts II and III contain structured chapters, which enable the reader to access and compare information easily. These individual descriptions of each language or cluster include phonology, morphology, syntax, lexis and dialects. Suggestions are made for the most useful sources of further reading and the work is comprehensively indexed.

The Semitic Languages Stefan Weninger, 2011-12-23 The handbook The Semitic Languages offers a comprehensive reference tool for Semitic Linguistics in its broad sense. It is not restricted to comparative Grammar, although it covers also comparative aspects, including classification. By comprising a chapter on typology and sections with sociolinguistic focus and language contact, the conception of the book aims at a rather complete, unbiased description of the state of the art in Semitics. Articles on individual languages and dialects give basic facts as location, numbers of speakers, scripts, numbers of extant texts and their nature, attestation where appropriate, and salient features of the grammar and lexicon of the respective variety. The handbook is the most comprehensive treatment of the Semitic language family since many decades.

Semitic Languages Gideon Goldenberg, 2013-01-10 This book offers a thorough, authoritative account of the branches of Semitic, among them Akkadian, Aramaic, Hebrew, Arabic, and Ethiopic. It describes their history from ancient times to the present, geographical distribution, writing systems, classification, linguistic features, distinctive characteristics, and typological significance.

The Semitic Languages John Huehnergard, Na'ama Pat-El, 2019-02-18 The Semitic Languages presents a comprehensive survey of the individual languages and language clusters within this language family, from their origins in

antiquity to their present-day forms. This second edition has been fully revised, with new chapters and a wealth of additional material. New features include the following: • new introductory chapters on Proto-Semitic grammar and Semitic linguistic typology • an additional chapter on the place of Semitic as a subgroup of Afro-Asiatic, and several chapters on modern forms of Arabic, Aramaic and Ethiopian Semitic • text samples of each individual language, transcribed into the International Phonetic Alphabet, with standard linguistic word-by-word glossing as well as translation • new maps and tables present information visually for easy reference. This unique resource is the ideal reference for advanced undergraduate and postgraduate students of linguistics and language. It will be of interest to researchers and anyone with an interest in historical linguistics, linguistic typology, linguistic anthropology and language development.

Semitic Languages Edward Lipiński, 2001 The first comparative grammar of the Semitic languages, by H. Zimmern, was published a hundred years ago and the last original work of this kind was issued in Russian in 1972 by B.M. Grande. The present grammar, designed to come out in the centenary of the completion of Zimmern's work, fills thus a gap. Besides, it is based on both classical and modern Semitic languages, it takes new material of these last decades into account, and situates the Semitic languages in the wider context of Afro-Asiatic. The introduction briefly presents the languages in question. The main parts of the work are devoted to phonology, morphology, and syntax, with elaborate charts and diagrams. Then follows a discussion of fundamental questions related to lexicographical analysis. The study is supplemented by a glossary of linguistic terms used in Semitics, by a selective bibliography, by a general index, and by an index of words and forms. The book is the result of twenty-five years of research and teaching in comparative Semitic grammar.

Semitic Languages in Contact Aaron Butts, 2015-09-29 Semitic Languages in Contact contains twenty case studies analysing various contact situations involving Semitic languages. The languages treated span from ancient Semitic languages, such as Akkadian, Aramaic, Classical Ethiopic, Hebrew, Phoenician, and Ugaritic, to modern ones, including languages/dialects belonging to the Modern Arabic, Modern South Arabian, Neo-Aramaic, and Neo-Ethiopian branches of the Semitic family. The topics discussed include writing systems, phonology, morphology, syntax, and lexicon. The approaches range from traditional philology to more theoretically-driven linguistics. These diverse studies are united by the theme of language contact. Thus, the volume aims to provide the status quaestionis of the study of language contact among the Semitic languages. With contributions from A. Al-Jallad, A. Al-Manaser, D. Appleyard, S. Boyd, Y. Breuer, M. Bulakh, D. Calabro, E. Cohen, R. Contini, C. J. Crisostomo, L. Edzard, H. Hardy, U. Horesh, O. Jastrow, L. A Brief Introduction to the Semitic Languages Aaron D. Rubin, 2010 With a written history of nearly five thousand years, the Semitic languages comprise one of the world's earliest and longest attested families. This volume provides an

overview of this important language family, including both ancient and modern languages. After a brief introduction to the history of the family and its internal classification, subsequent chapters cover topics in phonology, morphology, syntax, and lexicon. Each chapter describes features that are characteristic of the Semitic language family as a whole, as well as some of the more extraordinary developments that take place in the individual languages.

The Arabic Language C. H. M. Versteegh, 1997 This general introduction to the Arabic Language, now available in paperback, places special emphasis on the history and variation of the language. Concentrating on the difference between the two types of Arabic - the Classical standard language and the dialects - Kees Versteegh charts the history and development of the Arabic language from the earliest beginnings to modern times. The reader is offered a solid grounding in the structure of the language, its historical context and its use in various literary and non-literary genres, as well as an understanding of the role of Arabic as a cultural, religious and political world language. Intended as an introductory guide for students of Arabic, it will also be a useful tool for discussions both from a historical linguistic and from a socio-linguistic perspective. Coverage includes all aspects of the history of Arabic, the Arabic linguistic tradition, Arabic dialects and Arabic as a world language. Links are made between linguistic history and cultural history, while the author emphasises the role of contacts between Arabic and other languages. This important book will be an ideal text for all those wishing to acquire an understanding or develop their knowledge of the Arabic language.

Natural Language Processing of Semitic Languages Imed Zitouni, 2014-04-22 Research in Natural Language Processing (NLP) has rapidly advanced in recent years, resulting in exciting algorithms for sophisticated processing of text and speech in various languages. Much of this work focuses on English; in this book we address another group of interesting and challenging languages for NLP research: the Semitic languages. The Semitic group of languages includes Arabic (206 million native speakers), Amharic (27 million), Hebrew (7 million), Tigrinya (6.7 million), Syriac (1 million) and Maltese (419 thousand). Semitic languages exhibit unique morphological processes, challenging syntactic constructions and various other

phenomena that are less prevalent in other natural languages. These challenges call for unique solutions, many of which are described in this book. The 13 chapters presented in this book bring together leading scientists from several universities and research institutes worldwide. While this book devotes some attention to cutting-edge algorithms and techniques, its primary purpose is a thorough explication of best practices in the field. Furthermore, every chapter describes how the techniques discussed apply to Semitic languages. The book covers both statistical approaches to NLP, which are dominant across various applications nowadays and the more traditional, rule-based approaches, that were proven useful for several other application domains. We hope that this book will provide a one-stop-shop" for all the requisite background and practical advice when building NLP applications for Semitic languages.

Language Engineering for Lesser-studied Languages Sergei Nirenburg,2009 Technologies enabling computers to process specific languages facilitate economic and political progress of societies where these languages are spoken. Development of methods and systems for language processing is therefore a worthy goal for national governments as well as for business entities and scientific and educational institutions in every country in the world. As work on systems and resources for the 'lower-density' languages becomes more widespread, an important question is how to leverage the results and experience accumulated by the field of computational linguistics for the major languages in the development of resources and systems for lower-density languages. This issue has been at the core of the NATO Advanced Studies Institute on language technologies for middle- and low-density languages held in Georgia in October 2007. This publication is a collection - of publication-oriented versions - of the lectures presented there and is a useful source of knowledge about many core facets of modern computational-linguistic work. By the same token, it can serve as a reference source for people interested in learning about strategies that are best suited for developing computational-linguistic capabilities for lesser-studied languages - either 'from scratch' or using components developed for other languages. The book should also be quite useful in teaching practical system- and resource-building topics in computational linguistics.--Site Web de l'éditeur.
