**The Evolution of Mind** Steven W. Gangestad, Jeffrey A. Simpson, 2016-01-26 In the past two decades, an explosion of research has generated many compelling insights--as well as hotly debated controversies--about the evolutionary bases of human nature. This important volume brings together leading proponents of different theoretical and methodological perspectives to provide a balanced look at 12 key questions at the core of the field today. In 43 concise, accessible chapters, followed by an integrative conclusion, the contributors present viewpoints informed by human behavioral ecology, evolutionary psychology, and gene-culture coevolutionary approaches. Topics include the strengths and limitations of different methodologies; metatheoretical issues; and debates concerning the evolution of the human brain, intellectual abilities, culture, and sexual behavior.

*A Companion to Anthropological Genetics* Dennis H. O'Rourke, 2019-03-19 Explore the latest research in anthropological genetics and understand the genome's role in cultural and social development *A Companion to Anthropological Genetics* illustrates the role of genetic analysis in advancing the modern study of human origins, populations, evolution, and diversity. Broad in scope, this essential reference work establishes and explores the relationship between genetic research and the major questions of anthropological study. Through contributions by leading researchers, this collection explores molecular genetics and evolutionary mechanisms in the context of macro- and microevolution, paleontology, phylogeny, diet, and disease, with detailed explanations of quantitative methods, including coalescent and approximate Bayesian computation. With an emphasis on contextualizing new and developing genetic research within anthropological frameworks, this text offers critical perspective on the conditions of molecular evolution that accompany cultural and social transformation, while also addressing critical disciplinary questions, such as the ethical issues surrounding ancestry testing and community-based genetic research. Acts as an essential reference on the contributions of genetic science to the field of anthropology Features new work by leading researchers of the field Explores the evolution of immunity, including the genetics and epigenetics of pathogens, chronic illness, and disease resistance Provides in-depth examination of mutation and dietary adaptation, including AMY1, lactase persistence, and sensory polymorphisms Explains essential quantitative and phylogenetic methods for aligning genomic analysis with evolution and migration time scales Offering thorough coverage on leading questions and developing research, *A Companion to Anthropological Genetics* is a comprehensive resource for students and scholars.

**Dispatches from the Field** Andrew Gardner,David M. Hoffman,2006-04-17 Penned by advanced graduate students amidst their dissertation fieldwork, these provocative essays capture the challenges and intricacies of that anthropological rite of passage. The collections authors frankly portray the mistakes they made in the field, their struggle to analyze the events unfolding before their eyes, the psychological and emotional frustration seemingly endemic to doing ethnography, and the ethical complexities of researching living people. The authors present these essays not as models of ideal fieldwork or as a series of lessons about how to overcome potential hurdles one faces in the field, but rather as a window into the complexities of being an ethnographer in the contemporary world. Against a backdrop of subject populations increasingly informed about global relations of power and, more specifically, informed about the topography of American imperialism, these humanistic essays vividly reflect recent shifts in both the focus and methods of anthropological research, as well as the dilemmas underlying the construction of anthropological knowledge. They are meant to spark discussion and debate. While tailored to an audience relatively new to ethnographic fieldwork (and intended as a teaching tool), this collection should appeal to anthropologists and ethnographers at all points in their career.

*Graduate Programs in the Humanities, Arts & Social Sciences 2015 (Grad 2)* Peterson's,2014-11-25 Peterson's Graduate Programs in the Humanities, Arts & Social Sciences 2015 contains details on more than 11,000 graduate programs of study across all relevant disciplines-including the arts and architecture, communications and media, psychology and counseling, political science and international affairs, economics, and sociology, anthropology, archaeology, and more. Informative data profiles include facts and figures on accreditation, degree requirements, application deadlines and contact information, financial support, faculty, and student body profiles. Two-page in-depth descriptions, written by featured institutions, offer complete details on specific graduate programs, schools, or departments as well as information on faculty research. Comprehensive directories list programs in this volume, as well as others in the graduate series.

**Peoples and Crafts in Period IVB at Hasanlu, Iran** Maude de Schauensee,2015-02-13 The University of Pennsylvania Museum of Archaeology and Anthropology has had a long-standing interest in the archaeology of Iran. In 1956, Robert H. Dyson, Jr., began excavations south of Lake Urmia at the large mounded site of Hasanlu. Although the results of these excavations await final publication, the Hasanlu Special Studies series—of which this monograph is the fourth

volume—describes and analyzes specific aspects of technology, style, and iconography. This volume describes a group of ongoing research projects, most of which provide new information on Iron Age technology. A theme that runs through these studies is the degree to which ancient workers varied the composition of their products to create desirable colors and textures. The book begins with a description of the wooden furniture fragments along with fittings and decorative elements for furniture. It presents the first detailed description of the charred textiles, and places these textiles in their archaeological contexts, suggesting the roles that textiles may have played in daily life. Later chapters assess the significance of Hasanlu in the history of glassmaking, describe the archaeometallurgy of the Hasanlu IVB bronzes, and present a catalog of the bladed weapons. Also, the book presents the evidence for deliberate violence against individuals as indicated by their skeletal injuries and the results of a project undertaken to determine whether DNA could be used to obtain a better understanding of the population history at Hasanlu. **Archaeology of Food: An Encyclopedia** Karen Bescherer Metheny, Mary C. Beaudry, 2015-08-07 What are the origins of agriculture? In what ways have technological advances related to food affected human development? How have food and foodways been used to create identity, communicate meaning, and organize society? In this highly readable, illustrated volume, archaeologists and other scholars from across the globe explore these questions and more. The Archaeology of Food offers more than 250 entries spanning geographic and temporal contexts and features recent discoveries alongside the results of decades of research. The contributors provide overviews of current knowledge and theoretical perspectives, raise key questions, and delve into myriad scientific, archaeological, and material analyses to add depth to our understanding of

food. The encyclopedia serves as a reference for scholars and students in archaeology, food studies, and related disciplines, as well as fascinating reading for culinary historians, food writers, and food and archaeology enthusiasts.

**Evolutionary Cognitive Neuroscience** Steven Platek, Julian Keenan, Todd Kennedy Shackelford, 2007 An essential reference for the new discipline of evolutionary cognitive neuroscience that defines the field's approach of applying evolutionary theory to guide brain-behavior investigations. Since Darwin we have known that evolution has shaped all organisms and that biological organs—including the brain and the highly crafted animal nervous system—are subject to the pressures of natural and sexual selection. It is only relatively recently, however, that the cognitive neurosciences have begun to apply evolutionary theory and methods to the study of brain and behavior. This landmark reference documents and defines the emerging field of evolutionary cognitive neuroscience. Chapters by leading researchers demonstrate the power of the evolutionary perspective to yield new data, theory, and insights on the evolution and functional modularity of the brain. Evolutionary cognitive neuroscience covers all areas of cognitive neuroscience, from nonhuman brain-behavior relationships to human cognition and consciousness, and each section of *Evolutionary Cognitive Neuroscience* addresses a different adaptive problem. After an introductory section that outlines the basic tenets of both theory and methodology of an evolutionarily informed cognitive neuroscience, the book treats neuroanatomy from ontogenetic and phylogenetic perspectives and explores reproduction and kin recognition, spatial cognition and language, and self-awareness and social cognition. Notable findings include a theory to explain the extended ontogenetic and brain development periods of big-brained organisms, fMRI research on the neural correlates of romantic attraction, an evolutionary view of sex differences in spatial cognition, a theory of language evolution that draws on recent research on mirror neurons, and evidence for a rudimentary theory of mind in nonhuman primates. A final section discusses the ethical implications of evolutionary cognitive neuroscience and the future of the field. Contributors: C. Davison Ankney, Simon Baron-Cohen, S. *Education in Global Health Policy Making and Management* Eduardo Missoni,Fabrizio

Tediosi,2013-11-17T00:00:00+01:00 Global health has been increasingly recognized as a key element of sustainable development. The recent increase in the number of public and private global health actors and the complex global governance for health boosted the need for professionals who combine a thorough understanding of health-related challenges with multidisciplinary training in social sciences, economics, and management. In the past few years, this has led, not only to the mushrooming of courses dedicated to global health, but also academic degrees in global health. By reviewing a recent attempt to innovate the educational offerings in global health policy and management by a consortium of academic institutions in Italy, the book analyzes the recent trends in global health education. The book concludes that while global health and development is certainly an emerging area in the higher education systems of many countries, international offerings in graduate programs are still highly dominated by those taught in medical schools, often failing to combine health sciences with economic, social, and management sciences. The multidisciplinary nature of global health education programs should be improved.

*Handbook of Culture, Therapy, and Healing* Uwe P. Gielen,Jefferson M. Fish,Juris G. Draguns,2012-10-12 Emotional, as well as physical distress, is a heritage from our hominid ancestors; it has been experienced by every group of human beings since our emergence as a species. And every known culture has developed systems of conceptualization and intervention for addressing it. The editors have brought together leading psychologists, psychiatrists, anthropologists, and others to consider the interaction of psychosocial, biological, and cultural variables as they influence the assessment of health and illness and the course of therapy. The volume includes broadly conceived theoretical and survey chapters; detailed descriptions of specific healing traditions in Asia, the Americas, Africa, and the Arab world. The Handbook of Culture, Therapy, and Healing is a unique resource, containing information about Western therapies practiced in non-Western cultures, non-Western therapies practiced both in their own context and in the West.
