PCR for Clinical Microbiology Ian W.J. Carter, Margret Schuller, Gregory S. James, Theo P. Sloots, Catriona L. Halliday, 2010-07-03 Not another textbook, but a valuable tool for doctors and microbiologists wanting to know how to set up a PCR diagnostic microbiology laboratory according to current regulatory standards and perform assays supplied with patient clinical diagnostic criteria and easy to follow protocols. Whether laboratories are using commercial kits or in-house methods developed in their own laboratories or adopted from published methods, all clinical microbiology laboratories need to be able to understand, critically evaluate, perform and interpret these tests according to rigorous and clinically appropriate standards and international guidelines. The cost and effort of development and evaluation of in-house tests is considerable and many laboratories do not have the resources to do so. This compendium is a vehicle to improve and maintain the clinical relevance and high quality of diagnostic PCR. It is a unique collection of; guidelines for PCR laboratory set up and quality control, test selection criteria, methods and detailed step by step protocols for a diagnostic assays in the field of molecular microbiology. The structure of the book provides the PCR fundamentals and describes the clinical aspects

and diagnosis of infectious disease. This is followed by protocols divided into; bacteria, virus, fungi and parasites, and susceptibility screens. The inclusion of medical criteria and interpretation adds value to the compendium and benefits clinicians, scientists, researchers and students of clinical diagnostic microbiology

Peripheral Nerve Disorders Jean-Michel Vallat, Joachim Weiss, 2014-10-20 Peripheral Nerve Disorders: Pathology and Genetics is a definitive, clinically-oriented guide to the pathology of peripheral nerve disorders. These commonly seen neurological challenges have many causes and accurate diagnosis is often necessary via pathological analysis. New techniques exploiting molecular biological knowledge have opened up new vistas to understanding the pathogenesis of these disorders, and hence their effective management. This new title takes a disease-oriented approach to understanding the pathology of these conditions. It combines classical and contemporary techniques to enable practitioners in neurology and neuropathology to better understanding of the disease processes underlying patients' presentations and to formulate appropriate management plans. Peripheral Nerve Disorders: Pathology and Genetics is a valuable resource for neurologists, neuropathologists, pathologists, neurobiologists and geneticists.

*JIMD Reports, Volume 28* Eva Morava, Matthias Baumgartner, Marc Patterson, Shamima Rahman, Johannes Zschocke, Verena Peters, 2016-07-05 JIMD Reports publishes case and short research reports in the area of inherited metabolic disorders. Case reports highlight some unusual or previously unrecorded feature relevant to the disorder, or serve as an important reminder of clinical or biochemical features of a Mendelian disorder.

*Paraneoplastic Neurologic Disorders* ,2024-03-15 This book extensively reviews Paraneoplastic Neurological Syndromes in light of the most recent descriptions of autoantibodies against neuronal cell surface antigens (only partly associated with paraneoplastic disorders) and the introduction of new immuno-oncological drugs that can contribute to causing diseases that are pathogenetically indistinguishable from paraneoplastic syndromes. These two new developments have not been addressed in other volumes available on the market. Section 1 focuses on immunological defense mechanisms against tumors. Besides investigating the pathogenetic mechanisms of these disorders, this section will also explore what the introduction of new drugs used in immune checkpoint inhibitor cancer therapy is teaching us in terms of immunopathogenesis. The second section will present individual syndromes (phenotypical clinical manifestations) of the CNS, PNS, NMJ and muscle. These chapters will, however, be preceded by an epidemiological analysis and a chapter describing the clinical approach to patients with these disorders. Consideration will also be given in specific chapters to general therapeutic strategies and the techniques used to search for diagnostically relevant autoantibodies. Presentation of the individual diseases will be followed by a third section investigating the role of antibody markers, presented in three chapters differentiating cytoplasmic, nuclear and neuronal cell surface reactivities. The innovative component of the final two

sections compared to previously published volumes lies in their presentation of the profile of paraneoplastic diseases by tumor type. Special attention will be given to thymoma (involved particularly with novel antibodies against surface antigens), and neuroendocrine tumours, which are as yet comparatively unexplored in the literature. Lastly, a clinical update will be provided on gynecological, hematological and testicular malignancies. The last section will address side effects of the new immuno-oncological drugs increasingly used in cancer therapy. The high number of neurological complications that occur when tumor checkpoints are inhibited against immune defences provides the ideal experimental model for understanding the pathogenesis of these diseases.

- Profiles paraneoplastic diseases by tumor type
- Identifies the pathogenetic mechanisms of PNS and provides epidemiological analysis
- Presents individual syndromes of the CNS, PNS, NMJ, and muscle
