Fred F. Ferri

The Diving Bell and the Butterfly Jean-Dominique Bauby, 2008-03-06 A triumphant memoir by the former editor-in-chief of French Elle that reveals an indomitable spirit and celebrates the liberating power of consciousness. In 1995, Jean-Dominique Bauby was the editor-in-chief of French Elle, the father of two young children, a 44-year-old man known and loved for his wit, his style, and his impassioned approach to life. By the end of the year he was also the victim of a rare kind of stroke to the brainstem. After 20 days in a coma, Bauby awoke into a body which had all but stopped working: only his left eye functioned, allowing him to see and, by blinking it, to make clear that his mind was unimpaired. Almost miraculously, he was soon able to express himself in the richest detail: dictating a word at a time, blinking to select each letter as the alphabet was recited to him slowly, over and over again. In the same way, he was able eventually to compose this extraordinary book. By turns wistful, mischievous, angry, and witty, Bauby bears witness to his determination to live as fully in his mind as he had been able to do in his body. He explains the joy, and deep sadness, of seeing his children and of hearing his aged father's voice on the phone. In magical sequences, he imagines traveling to other places and times and of lying next to the woman he loves. Fed only intravenously, he imagines preparing and tasting the full flavor of delectable dishes. Again and again he returns to an inexhaustible reservoir of sensations, keeping in touch with himself and the life around him. Jean-Dominique Bauby died two days after the French publication of *The Diving Bell and the Butterfly*. This book is a lasting testament to his life.

Source Book in Bioethics Albert R. Jonsen, Robert M. Veatch, LeRoy Walters, 1999-09-07 Government agencies and commissions, courts, and legislatures have during the past several decades produced reports, rendered decisions, and passed laws that have both defined the fundamental issues in the field of bioethics and established ways of managing them in our society. Providing a history of these key bioethical decisions, this *Source Book in Bioethics* is the first and only comprehensive collection of the critical public documents in biomedical ethics, including many hard-to-find or out-of-print materials. Covering the period from 1947 to 1995, this volume brings together core legislative documents, court briefs, and reports by professional organizations, public bodies, and governments around the world. Sections on human experimentation, care of the terminally ill, genetics, human reproduction, and emerging areas in bioethics include such pivotal works as *The Nuremberg Code*, *The Tuskegee Report*, and *In the Matter of Baby M*, as well less readily available documents as *The*

Declaration of Inuyama, the Council for International Organizations of Medical Sciences statement on genetic engineering, and The Warnock Committee Report on reproductive technologies from the United Kingdom. Three eminent scholars in the field provide brief introductions to each document explaining the significance of these classic sources. This historical volume will be a standard text for courses in bioethics, health policy, and death and dying, and a primary reference for anyone interested in this increasingly relevant field.

Medical Neurobiology Peggy Mason, 2017 This textbook guides the medical student, regardless of background or intended specialty, through the anatomy and function of the human nervous system. In writing specifically for medical students, the author concentrates on the neural contributions to common diseases, whether neurological or not, and omits topics without clinical relevance.

The Feeling of what Happens Antonio R. Damasio, 1999 The publication of this book is an event in the making. All over the world scientists, psychologists, and philosophers are waiting to read Antonio Damasio's new theory of the nature of consciousness and the construction of the self. A renowned and revered scientist and clinician, Damasio has spent decades following amnesiacs down hospital corridors, waiting for comatose patients to awaken, and devising ingenious research using PET scans to piece together the great puzzle of consciousness. In his bestselling *Descartes' Error*, Damasio revealed the critical importance of emotion in the making of reason. Building on this foundation, he now shows how consciousness is created. Consciousness is the feeling of what happens—our mind noticing the body's reaction to the world and responding to that experience. Without our bodies there can be no consciousness, which is at heart a mechanism for survival that engages body, emotion, and mind in the glorious spiral of human life. A hymn to the possibilities of human existence, a magnificent work of ingenious science, a gorgeously written book, *The Feeling of What Happens* is already being hailed as a classic.

Neurotechnology James Giordano, 2012-04-26 New technologies that allow us to investigate mechanisms and functions of the brain have shown considerable promise in treating brain disease and injury. These emerging technologies also provide a means to assess and manipulate human consciousness, cognitions, emotions, and behaviors, bringing with them the potential to transform society. *Neurotechnology: Premises, Potential, and Problems* explores the technical, moral, legal, and sociopolitical issues that arise in and from today's applications of neuroscience and technology and discusses their implications for the future. Some of the issues raised in this thought-provoking volume include: Neurotechnology in education: an enablement, a treatment, or an enhancement? The potential and limitations of neuroimaging technology in determining patient prognoses Tissue implantation technology as a way of engendering personalized medicine Neuroprostheses: restoration of functions of the disabled vs. enhancement to transhuman capabilities Deep brain stimulation and its use in restoring, preserving, or changing patients' personal identity The benefit and risk of cognitive performance tools Cyborg technology and its potential to change our vision of humanity Methodologies for reducing the risk of

neurotechnology's impact on ethical, legal, and social issues With contributions from an international group of experts working on the cutting edge of neurotechnology, this volume lays the groundwork to appreciate the ethical, legal, and social aspects of the science in ways that keep pace with this rapidly progressing field.

Incredible Consequences of Brain Injury Alexander R. Toftness,2022-11-11 Incredible Consequences of Brain Injury: The Ways your Brain can Break explains the acquired brain disorders that can suddenly change a person's life. Underlining

the intricate workings of the human brain and the amazing things it does every day, this book examines what happens when the brain stops functioning as it should. Through the use of case studies and historical examples, this concentrated collection of different neuropsychological conditions provides the reader a glimpse into the lived experiences of each disorder. Each chapter is firmly rooted in relevant neuropsychological literature combined with easy-to-understand explanations and guided reflection. In its essence, this book is a celebration of the human brain and the myriad factors that make it up, serving to maintain hope in recovering from brain conditions, and to marvel at the intricate workings of the brain. This valuable compendium is essential for anyone who wants to learn more about how the brain functions and dysfunctions and will be equally useful for students, instructors, and healthcare workers. It will further be of use to individuals with brain conditions and their dear ones and for the individuals who are interested in learning more about the human brain.

The Lost Art of Silence Sarah Anderson, 2023-12-05 A unique celebration of silence—in art, literature, nature, and spirituality—and an exploration of its ability to bring inner peace, widen our perspectives, and inspire the human spirit in spite of the noise of contemporary life. Silence is habitually overlooked—after all, throughout our lives, it has to compete with the cacophony of the outside world and our near-constant interior dialogue that judges, analyzes, compares, and questions. But, if we can get past this barrage, there lies a quiet place that’s well worth discovering. *The Lost Art of Silence* encourages us to embrace this pursuit and allow the warm light of silence to glow. Invoking the wisdom of many of the greatest writers, thinkers, contemplatives, historians, musicians, and artists, Sarah Anderson reveals the sublime nature of quiet that’s all too often undervalued. Throughout, she shares her own penetrating insights into the potential for silence to transform us. This celebration of silence invites us to widen our perspective and shows its power to inspire the human spirit in spite of the distracting noise of contemporary life.

Letters to an Incarcerated Brother Hill Harper, 2013-11-05 A compelling, important addition to Hill Harper’s bestselling series, inspired by the numerous young inmates who write to him seeking guidance. After the publication of the bestselling *Letters to a Young Brother*, accomplished actor and speaker Hill Harper began to receive an increasing number of moving letters from inmates who yearned for a connection with a successful role model. With disturbing statistics on African-American incarceration on his mind (one in six black men were incarcerated as of 2001, and one in three can now expect to go to prison some time in their lifetimes), Harper set out to address the specific needs of inmates. A powerful message from the heart, *Letters to an Incarcerated Brother* provides advice and inspiration in the face of despair along with encouraging words for restoring a sense of self-worth. As the founder of Manifest Your Destiny, a nonprofit outreach program for at-risk teens, Harper has seen firsthand the transformative effect of mentorship and the power of a positive role model. This latest addition to Hill Harper’s Letters series delivers visionary, compassionate responses to the real-life circumstances of inmates. As with the other Letters books, Harper includes moving contributions from top educators, activists, thought leaders, and

entertainers. Uplifting and insightful, Letters to an Incarcerated Brother provides the hope and inspiration inmates and their families need.

Power Of Computational Thinking, The: Games, Magic And Puzzles To Help You Become A Computational Thinker Peter William Mcowan, Paul Curzon, 2017-01-17 From the team behind Computer Science for Fun (cs4fn), The Power of Computational Thinking shows that learning to think can be fascinating fun. Yes, and this book shows you how. Computational thinking has changed the way we all live, work and play. It has changed the way science is done too; won wars, created whole new industries and saved lives. It is at the heart of computer programming and is a powerful approach to problem solving, with or without computers. It is so important that many countries now require that primary school children learn the skills. Professors Paul Curzon and Peter McOwan of Queen Mary University of London have written a unique and enjoyable introduction. They describe the elements of computational thinking — such as algorithmic thinking, decomposition, abstraction and pattern matching — in an entertaining and accessible way, using magic tricks, games and puzzles, as well as through real and challenging problems that computer scientists work on. This book gives you a head start in learning the skills needed for coding, and will improve your real life problem solving skills. It will help you design and evaluate new technologies, as well as understand both your own brain and the digital world in a deeper way.

Normative Reasons and Theism Gerald K. Harrison, 2018-06-06 Normative reasons are reasons to do and believe things. Intellectual inquiry seems to presuppose their existence, for we cannot justifiably conclude that we exist; that there is an external world; and that there are better and worse ways of investigating it and behaving in it, unless there are reasons to do and believe such things. But just what in the world are normative reasons? In this book a case is made for believing normative reasons are favouring relations that have a single, external source, filling this significant gap in the literature in an area within contemporary philosophy that has quickly grown in prominence. Providing a divine command metanormative analysis of normative reasons on entirely non-religious grounds, its arguments will be relevant to both secular and non-secular audiences alike and will address key issues in meta-ethics, evolutionary theory - especially evolutionary debunking threats to moral reasons and the normative more generally - and epistemology.

EBOOK: Cognitive Psychology Kenneth Gilhooly, Fiona Lyddy, Frank Pollick, 2014-04-16 Cognitive Psychology is a brand new textbook by Ken Gilhooly, Fiona Lyddy & Frank Pollick. Based on a multidisciplinary approach, the book encourages students to make the connections between cognition, cognitive neuroscience and behaviour. The book provides an up-to-date, accessible introduction to the subject, showing students the relevance of cognitive psychology through a range of examples, applications and international research. Recent work from neuroscience is integrated throughout the book, and coverage is given to rapidly-developing topics, such as emotion and cognition. Cognitive Psychology is designed to provide an accessible and engaging introduction to Cognitive Psychology for 1st and 2nd year undergraduate students. It takes an international approach with an emphasis on research, methodology and application.

Neuroscience and Art Amy Ione, 2024-08-27 This book is focused on how understanding ourselves as humans is incomplete without considering both biological and cultural aspects. Using the neurocultural perspective, the book explores how everything in the world is filtered back and forth through the brain and culture. The thrust of the book, therefore, is to

explore the power of art in creating a bridge between cultural and neuroscientific lines of inquiry. Looking at both clinical and non-clinical populations, the text examines historical foundations, distinguishes congenital/developmental conditions from those that are acquired, and emphasizes how the brain constructs our sensory experiences. Several distinctive features separate this research from other publications. First, the book opens with a review of how the historical literature is still etched into the ideas we employ to explain elements across the interdisciplinary fields of art, aesthetics, our sensory experience, psychology, cognition, and well-being. Second, the research adopts a humanistic rather than a philosophical or social science perspective in demonstrating the value of coupling anatomy and physiology with the natural and social environment. In this, artists from all genres are incorporated. Among them are Iris Murdoch, Ludwig van Beethoven, Leonardo da Vinci, Cristoforo de Predis, Rembrandt, Federico Fellini, Chuck Close, and David Hockney. Case studies demonstrate how neuroscientific research meshes with art, individual, and cultural variables in ways that range from health and well-being to physiological decline and biological traumas. These include a case study that examines how Oliver Sacks combined biology and biography in his writings. It also explores art projects in several genres inspired by his studies. Another case study is on the role of film as a useful clinical tool. Here the book also demonstrates that cinematic devices used by filmmakers intersect with perceptual and cognitive neuroscience. A defining feature of the analysis is the integration of research on brain injuries with humanistic responses in film, literature, and the visual arts. This section outlines the lack of consensus regarding the causes and treatment of “shell shock” in World War I before introducing how research and art now work with PTSD/TBI. Finally, the book examines therapeutic cases of professional and non-professional artists, concluding with a discussion of synesthesia and the senses.

The Neurology of Consciousness Steven Laureys, Olivia Gosseries, Giulio Tononi, 2015-08-12 The second edition of *The Neurology of Consciousness* is a comprehensive update of this ground-breaking work on human consciousness, the first book in this area to summarize the neuroanatomical and functional underpinnings of consciousness by emphasizing a lesional approach offered by the study of neurological patients. Since the publication of the first edition in 2009, new methodologies

have made consciousness much more accessible scientifically, and, in particular, the study of disorders, disruptions, and disturbances of consciousness has added tremendously to our understanding of the biological basis of human consciousness. The publication of a new edition is both critical and timely for continued understanding of the field of consciousness. In this critical and timely update, revised and new contributions by internationally renowned researchers—edited by the leaders in the field of consciousness research—provide a unique and comprehensive focus on human consciousness. The new edition of *The Neurobiology of Consciousness* will continue to be an indispensable resource for researchers and students working on the cognitive neuroscience of consciousness and related disorders, as well as for neuroscientists, psychologists, psychiatrists, and neurologists contemplating consciousness as one of the philosophical, ethical, sociological, political, and religious questions of our time. - New chapters on the neuroanatomical basis of consciousness and short-term memory, and expanded coverage of comas and neuroethics, including the ethics of brain death - The first comprehensive, authoritative collection to describe disorders of consciousness and how they are used to study and understand the neural correlates of conscious perception in humans. - Includes both revised and new chapters from the top international researchers in the field, including Christof Koch, Marcus Raichle, Nicholas Schiff, Joseph Fins, and Michael Gazzaniga
