Biodegradation of Plastics Zhanyong Wang, Fan Li, Aamer Ali Shah, Ken'ichiro Matsumoto, Martin Koller, 2023-11-21
The consumption of plastic products has increased significantly with the rapid development of the global economy. The total output of virgin plastics has already reached eight billion tons, and the annual global plastic consumption has reached 2.8 billion tons. In parallel with this high consumption rate, a staggering amount of plastic waste is generated annually. As a consequence of incorrect disposal of waste plastics and plastic longevity, this plastic waste is accumulating in the environment at an increasing rate. Moreover, since most plastic waste is corrosion resistant, these plastics do not decompose in the natural environment and can cause serious environmental pollution. In particular, petroleum-based synthetic polymers, including polyethylene, polyvinyl chloride, polystyrene, polypropylene, polyethylene terephthalate, and polyurethanes need hundreds of years to completely degrade in the natural environment. Moreover, although some aliphatic polyesters, such as polybutylene succinate, polycaprolactone, and polylactic acid are considered biodegradable, degradation of these plastics occurs only under specific microorganism activity and under specific conditions. Sometimes the apparent degradation is initiated by hydrolytic activity and not microorganism or enzymatic activity. Large-scale synthesis and application of plastics only began after 1950. Hence, the time span of plastic exposure in the environment has been too short for the adaptive evolution of natural microorganisms. Indeed, natural microorganisms showing high specificity for plastics and a high degradation efficiency are extremely scarce. Because of the inability of most natural microorganisms to recognize and degrade plastics, enzymes that can specifically degrade plastics are also scarce. Many of the enzymes which are known have either an unclear mechanism of the action on the polymer, a poor affinity for their substrates, a low efficiency, or enzyme production yield is currently low. To address these problems, new biotechnology strategies need to be implemented. In particular, new microorganisms and their enzymes need to be identified, and pathways for plastic degradation and molecular modification need to be clarified to enhance the activity and stability of the degrading enzymes. The current Research Topic aims to cover the recent and novel research trends in the development of plastics biodegradation (including petroleum-based plastics and bio-based plastics) under soil, composted, microbial and enzymatic conditions. The recycling technology of degraded products is also of interest.

Temas de Investigación Comercial Francisco José Mas Ruiz,2011-04-28 Este libro va dirigido a aquellos alumnos de la Universidad de Alicante matriculados en asignaturas relacionadas con la Investigación Comercial. Se estructura en cuatro partes. La primera desarrolla los fundamentos de la Investigación Comercial, distinguiendo el concepto, la evolución, la conexión con la dirección de marketing, los aspectos organizativos, así como el proceso de investigación. La segunda parte expone los sistemas de información de marketing y las fuentes de información exploratorias, descriptivas y causales. Asimismo, analiza el diseño del cuestionario y las escalas de medición. La tercera parte se ocupa, por un lado, de las características de los métodos de muestreo y, por otro, de la realización del trabajo de campo a través de la selección y control de entrevistadores. La última parte se dedica a la aplicación de los análisis estadísticos básicos a la información. Para cada parte, se han seleccionado varias prácticas que van desde problemas hasta casos para discutir.

Sludge Management B. Jimenez, Blanca Jimenez,2002 The treatment, management, and application or disposal of sludge is currently a major problem all over the world. However, solutions vary from one region to another and must be based on the technical and economical capacities of each country. Thus this issue reflects the special emphasis put on knowing the characteristics of sludges and their differences according to whether they come from a developed or a developing country, or from one region or another. A broad range of sludge stabilisation techniques were considered, ranging from low-cost and easy-to-operate technologies, to highly technological and costly alternatives, with local circumstances in mind. Sludge minimisation processes focus on solutions that avoid the problems, but it is clear that there will always be sludge generation and thus beneficial reuse should still be encouraged. Land application in developed and developing countries is included to present the perception of this alternative under different scenarios, comparing, for example, the experiences in countries like France and the United States, with those of Brazil and Greece. Similar international comparisons are given of management and regulatory regimes. Alternative processes give a rapid vision of non-conventional options that may constitute an interesting approach to sludge reuse. with the intention of satisfying the needs in different parts of the world. From the high-quality programme of this conference 41 papers have been selected after peer review. They provide an authoritative and wide-ranging survey of the state of research and practice in sludge management that will be an essential source of information of worldwide value.
