Nick Dunn,Paul Cureton

Cities in the Sky Jason M. Barr,2024-05-14 The world's skyscrapers have brought us awe and wonder, and yet they remain controversial-for their high costs, shadows, and overt grandiosity. But, decade by decade, they keep getting higher and higher. What is driving this global building spree of epic proportions? In *Cities in the Sky*, author Jason Barr explains all: why they appeal to cities and nations, how they get financed, why they succeed economically, and how they change a city's skyline and enable the world's greatest metropolises to thrive in the 21st century. From the Empire State Building (1,250 feet) to the Shanghai Tower (2,073 feet) and everywhere in between, Barr explains the unique architectural and engineering efforts that led to the creation of each. Along the way, Barr visits and unpacks some surprising myths about the earliest skyscrapers and the growth of American skylines after World War II, which incorporated a new suite of technologies that spread to the rest of the world in the 1990s. Barr also explores why London banned skyscrapers at the end of the 19th century but then embraced them in the 21st and explains how Hong Kong created the densest cluster of skyscrapers on the planet. Also covered is the dramatic result of China's skyscraper fever and then on to the Arabian Peninsula to see what drove Dubai to build the world's tallest building, the Burj Khalifa, which at 2,717 feet, is higher than the new One World Trade Center in New York by three football fields. Filled with fascinating details for urbanists, architecture buffs, and urban design enthusiasts alike, *Cities in the Sky* addresses the good, bad, and ugly for cities that have embraced vertical skylines and offers us a glimpse to the future to see whether cities around the world will continue their journey ever upwards--

Cities in the Sky Colin Uttley,1998-01-01 Speculates on the lifestyles, food, interpersonal relations, health aspects, and technology of life in space stations and in colonies on other planets.

Cities of the World Stanley D. Brunn, Maureen Hays-Mitchell, Donald J. Zeigler,2012 Remarkably, more than half of the world's population now lives in cities, and the numbers grow daily as people abandon rural areas. This fully updated and revised fifth edition of the classic text offers readers a comprehensive set of tools for understanding the urban landscape, and, by extension, the world's politics, cultures, and economies. Providing a sweeping overview of world urban geography, a group of noted experts explores the eleven major global regions. Each author presents the region's urban history, economy, culture, and society, as well as urban spatial models and problems and prospects. Environmental, human security,

globalization, and cyberspace topics are fully developed as well. Vignettes of seventy-eight key cities give the reader a vivid understanding of daily life and the spirit of place. An introductory chapter presents an overview of key terms and concepts, and a concluding chapter projects the world's urban future. Liberally illustrated with a new selection of photographs, maps, and diagrams, the text also includes a rich array of textboxes to highlight key topics ranging from gender and the city to Islamic fashion and global warming. Bibliographic sources, websites, and an appendix of UN data provide additional resources for helping students understand more about the urban world. Clearly written and timely, *Cities of the World* will be invaluable for those teaching introductory or advanced classes on global cities, regional geography, and urban studies.

Peerless Queen Qing LanZi, 2020-09-22 Lin Qingshan, who had just entered this world, was acquainted with the first person here, Long Yifeng. A man who was as shy as a fool. Both of them were servants of the Li Family, a famous family in a small town at the eastern border of the Sky Dragon Empire. After getting drunk, the third young master of the Li family coveted Lin Qingshan's beauty. In a fit of rage, Lin Qingshan castrated the local aristocrat and fled to the central region of the Arthur Continent. After a series of events, he became the first empress of the continent.

Future Cities Nick Dunn, Paul Cureton, 2020-12-10 What might our cities look like in ten, twenty or fifty years? How may future cities face global challenges? Imagining the city of the future has long been an inspiration for many architects, artists and designers. This book examines how cities of the future have been visualised, what these projects sought to communicate and what the implications may be for us now. It provides a visual history of the future and explores the relationships between different visualisation techniques and ideologies for cities. Thinking about what futures are, who they are for, why they are desirable, and how and when they are to be brought into being is central to this book. Through visualisation we are able to experiment in ways that would be impractical and potentially hazardous in the real world, and this book, therefore, aims to contribute toward a better understanding of the power and agency of visualisations for future cities. In this lavishly illustrated text, the authors apply several critical lenses to consider the subject in different ways: technological futures, social futures, and global futures, providing a comprehensive survey and analysis of visions for future cities, and engaging creatively with how we perceive tomorrow's world and future studies more widely.

Encyclopedia of Sustainability Robin Morris Collin,Robert William Collin,2009-12-09 This three-volume encyclopedia explores the concept of sustainability in the contexts of the environment, economics, and justice. This expansive encyclopedia breaks new ground, giving definition and focus to an urgent and much-talked-about topic that is extraordinarily wide ranging and all too often misunderstood. As the first major reference work in its field, the three comprehensive volumes span the entire scope of sustainability from ecological concepts to financial concerns to public policy and community action, giving readers a solid foundation from which to think critically about efforts to make a more sustainable world. The Encyclopedia of Sustainability comprises three volumes, each dedicated to one of three equally important contexts in which the term is used: environment and ecology, business and economics, and equity and fairness. Each volume provides authoritative but accessible coverage of basic concepts and terms, as well as policy initiatives, controversies, and future trends. Volumes also include biographical sketches of important contributors to sustainability efforts from the scientific, economic, public policy, and activist realms, plus extensive listings of print and online resources for further exploration.

easy-to-read and beautifully illustrated guide from astrophysicist and popular science blogger Dr. Jillian Scudder. Stars, the building blocks of the universe, are simply luminous spheres of plasma held together by gravity, but there are many kinds and many remarkable examples. Astoundingly, there are at least 100 billion stars in our galaxy and an estimated two trillion galaxies in our visible universe. Understanding the birth, life, and death of stars is key to a knowledge of astronomy. *40 Ways to Know a Star* offers forty short essays that explore everything from the Milky Way to planetary nebulae, from how a star is born to the colors of stars, each enhanced by a color illustration or graphic image. Dr. Scudder, whose popular *Astroquizzical* blog features an engaging ask an astronomer format, writes in a way that makes complex physics accessible. Magnificent imagery of the heavens, including ten color plates featuring NASA photographs, makes this space book as enticing as it is informative. **ASTROPHYSICS EXPERT:** Dr. Jillian Scudder is an astrophysicist and Associate Professor of Physics at Oberlin College, Ohio. She hosts and writes *Astroquizzical*, a blog in which she tackles some of the mysteries of the universe by answering space-related questions from the public. **ACCESSIBLE CONTENT:** This unique science book helps any reader understand our universe; it is full of charts and distinctive color illustrations that give clear and accessible explanations of the content and a resource page for further exploration. **ASTRONOMY GIFT:** Beautifully designed inside and out, the book's cover features gold foil to highlight the stellar content, making it an excellent coffee table book or gift for astronomy enthusiasts of all levels. Energy and Climate in the Urban Built Environment M. Santamouris, 2013-06-17 Both the number and percentage of people living in urban areas is growing rapidly. Up to half of the world's population is expected to be living in a city by the end of the century and there are over 170 cities in the world with populations over a million. Cities have a huge impact on the local climate and require vast quantities of energy to keep them functioning. The urban environment in turn has a big impact on the performance and needs of buildings. The size, scale and mechanism of these interactions is poorly understood and strategies to mitigate them are rarely implemented. This is the first comprehensive book to address these questions. It arises out of a programme of work (POLISTUDIES) carried out for the Save programme of the European Commission. Chapters describe not only the main problems encountered such as the heat island and canyon effects, but also a range of design solutions that can be adopted both to improve the energy performance and indoor air quality of individual buildings and to look at aspects of urban design that can reduce these climatic effects. The book concludes with some examples of innovative urban bioclimatic buildings. The project was co-ordinated by Professor Mat Santamouris from the University of Athens who is also the editor of the book. Other contributions are from the University of Thessaloniki, Greece, ENTPE, Lyons, France and

the University of Stuttgart, Germany.
