Hannes Meyer: Soviet Architect. Life and Work in the USSR, 1930-1936 Tatiana Efrussi,2025-03-31 Swiss architect and urban planner, the second director of the Bauhaus Dessau, Hannes Meyer, spent about six years in the USSR—from 1930 to 1936. This book presents the first in-depth study of Hannes Meyer's activities during the years of early Stalinism. There is a global interest in this architect's legacy today, but his work can hardly be understood without a closer examination of the key chapter in his career. This book is an attempt to challenge the usual Western-centered perspective and explore not only what Meyer could bring to the Soviet Union but also what he sought to learn there and how this interaction influenced his work and thinking. The somewhat provocative title underscores this thesis. A detailed reconstruction of his professional activities during this period was made possible through archival research in several countries (Russia, Germany, Austria, and Switzerland) and field trips across Russia. In the end, the narrative offers a glimpse into the Soviet architectural context of the 1930s—networks, hierarchies, behavioral strategies, theories, and interpretations of major polemical concepts such as proletarian architecture and socialist realism. Among the projects for socialist cities, Meyer was commissioned to create the urban plan for the capital of the Jewish Autonomous Region in the USSR—Birobidzhan. The dedicated book chapter explores his involvement in the search for a distinct Soviet Jewish style. Hannes Meyer, the most controversial of the architects associated with the Bauhaus, was passionately involved in politics, and available documents indicate his desire to become a Soviet architect at all costs. The research allows us to view Meyer not only as a victim but also as an actor in the early Stalinist system based on violence.

The Philosophy of Life and Death Nitzan Lebovic,2013-09-11 Some of the first figures the Nazis conscripted in their rise to power were rhetoricians devoted to popularizing the German vocabulary of Leben (life). This fascinating study reexamines this movement through one of its most prominent exponents, Ludwig Klages, revealing the philosophical-cultural crises and political volatility of the Weimar era.

The Integral Manifolds of the Three Body Problem Christopher Keil McCord,Kenneth Ray Meyer,Quidong Wang,1998 The phase space of the spatial three-body problem is an open subset in R18. Holding the ten classical integrals of energu, center of mass, linear and angular momentum fixed defines an eight dimensional manifold. For fixed nonzero angular

momentum, the topology of this manifold depends only on the energy. This volume computes the homology of this manifold for all energy values. This table of homology shows that for negative energy, the integral manifolds undergo seven bifurcations. Four of these are the well-known bifurcations due to central configurations, and three are due to critical points at infinity. This disproves Birkhoffs conjecture that the bifurcations occur only at central configurations.

Collecting Prints and Drawings Sylvia Heudecker,Andrea M. Gáldy,2019-01-22 Cabinets of prints and drawings are found in the earliest art collections of Early Modern Europe. From the sixteenth century onwards, some of them acquired such fame that the necessity for an ordered and scientific display meant that a dedicated keeper was occasionally employed to ensure that fellow enthusiasts, as well as visiting diplomats, courtiers and artists, might have access to the print room. Often collected and displayed together with drawings, the prints formed a substantial part of princely collections which sometimes achieved astounding longevity as a specialised group of collectibles, such as the Florentine Gabinetto Disegni e Stampe at the Uffizi (GDSU). Prints and drawings, both bought and commissioned, were collected by princes and by private amateurs. Like the rest of their collections, the prints and drawings were usually preserved and displayed as part of, or near, the owner's library in close proximity to scientific instruments, cut gems or small sculptural works of art. Both prints and drawings not only documented an encyclopaedic approach to the knowledge available at the time, but also depicted parts of the collections in the form of a paper museum. Prints and drawings also served as a guide to the collections. They spread their fame, and the renown of their owners, across Europe and into new worlds of collecting, both East and West. This volume explores issues such as: when, how and why did cabinets of prints and drawings become a specialised part of princely and private collections? How important were collections of prints and drawings for the self-representation of a prince or connoisseur among specialists and social peers? Is the presentation of a picture hanging in a gallery, for example by Charles Eisen for the Royal Galleries at Dresden, to be treated as documentary evidence? Are there notable differences in the approach to collecting, presentation and preservation of prints and drawings in diverse parts of the world? What was the afterlife of such collections up to the present day?

Among the Ginzburgs Ellen Pall,1996 A man who abandoned his family 28 years earlier returns home to die, an occasion for his five bitter children and their wives to come together and feud. Real estate agent Meyer Ginzburg, an erudite eccentric, left them for a woman poet and when she died wandered the world, becoming a Zen monk and a Peruvian guerrilla. A drawing-room drama set in the Catskills by the author of Back East.

Nonlinear Eigenvalues and Analytic-Hypoellipticity Ching-Chau Yu,1998 Explores the failure of analytic-hypoellipticity of two partial differential operators. The operators are sums of squares of real analytic vector fields and satisfy

Hormander's condition. By reducing to an ordinary differential operator, the author shows the existence of non-linear eigenvalues, which is used to disprove analytic- hypoellipticity of the original operators. No index. Annotation copyrighted by Book News, Inc., Portland, OR

Time-Dependent Subdifferential Evolution Inclusions and Optimal Control Shouchuan Hu,Nikolaos Socrates Papageorgiou,1998 This volume studies multivalued evolution equations driven by time-dependent subdifferential operators and optimal control problems for such systems. The formulation is general enough to incorporate problems with time varying constraints. For evolution inclusions, existence relaxation and structural results for the solution set are proved. For optimal control problems, a general existence theory is developed, different forms of the relaxed problem are introduced and studied, well-posedness properties are investigated and the precise relation between the properties of relaxability and well-posedness is established. Various examples of systems which fit in the abstract framework are analysed.

Higher Initial Ideals of Homogeneous Ideals Gunnar Fløystad,1998 Given a homogeneous ideal I and a monomial order, the initials ideal in (I) can be formed. The initial idea gives information about I, but quite a lot of information is also lost. The author remedies this by defining a series of higher initial ideals of a homogenous ideal, and considers the case when I is the homogenous ideal of a curve in P3 and the monomial order is reverse lexicographic. Short-Time Geometry of Random Heat Kernels Richard Bucher Sowers,1998 This volume studies the behaviour of a random heat kernel associated with a stochastic partial differential equation, and gives short-time expansion of this heat kernel. The author finds that the dominant exponential term is classical and depends only on the Riemannian distance function. The second exponential term is a work term and also has classical meaning. There is also a third non-negligible exponential term which blows up. The author finds an expression for this third exponential term which involves a random translation of the index form and the equations of Jacobi fields. In the process, he develops a method to approximate the heat

kernel to any arbitrary degree of precision.

Algebraic and Strong Splittings of Extensions of Banach Algebras William G. Bade,Harold G. Dales,Zinaida Alexandrovna Lykova,1999 In this volume, the authors address the following: Let A be a Banach algebra, and let $\sum\:\ 0\rightarrow I\rightarrow\frak A\overset\pi\to\longrightarrow A\rightarrow 0$ be an extension of A, where $\frak A$ is a Banach algebra and I is a closed ideal in $\frak A$. The extension splits algebraically (respectively, splits strongly) if there is a homomorphism (respectively, continuous homomorphism) $\theta\: A\rightarrow\frak A$ such that $\pi\circ\theta$ is the identity on A. Consider first for which Banach algebras A it is true that every extension of A in a particular class of extensions splits, either algebraically or strongly, and second for which Banach algebras it is true that every extension of A in a particular class which splits algebraically also splits strongly. These questions are closely related to the question when the algebra $\frak A$ has a (strong) Wedderburn decomposition. The main technique for resolving these questions involves the Banach cohomology group $\cal H2(A,E)$ for a Banach A-bimodule E, and related cohomology groups. Later chapters are particularly concerned with the case where the ideal I is finite-dimensional. Results are obtained for many of the standard Banach algebras A.
