Philippe Rège

Encyclopedia of French Film Directors Philippe Rège, 2009-12-11 Cinema has been long associated with France, dating back to 1895, when Louis and Auguste Lumi_re screened their works, the first public viewing of films anywhere. Early silent pioneers Georges MZli_s, Alice Guy BlachZ and others followed in the footsteps of the Lumi_re brothers and the tradition of important filmmaking continued throughout the 20th century and beyond. In Encyclopedia of French Film Directors, Philippe Rège identifies every French director who has made at least one feature film since 1895. From undisputed masters to obscure one-timers, nearly 3,000 directors are cited here, including at least 200 filmmakers not mentioned in similar books published in France. Each director's entry contains a brief biographical summary, including dates and places of birth and death; information on the individual's education and professional training; and other pertinent details, such as real names (when the filmmaker uses a pseudonym). The entries also provide complete filmographies, including credits for feature films, shorts, documentaries, and television work. Some of the most important names in the history of film can be found in this encyclopedia, from masters of the Golden Age_Jean Renoir and RenZ Clair_to French New Wave artists such as Fran_ois Truffaut and Jean-Luc Godard.

Le Pense-b♦te Didier Gourvennec Ogor,

An Algebraic Introduction to Complex Projective Geometry Christian Peskine, 1843 In this introduction to commutative algebra, the author choses a route that leads the reader through the essential ideas, without getting embroiled in technicalities. He takes the reader quickly to the fundamentals of complex projective geometry, requiring only a basic knowledge of linear and multilinear algebra and some elementary group theory. The author divides the book into three parts. In the first, he develops the general theory of noetherian rings and modules. He includes a certain amount of homological algebra, and he emphasizes rings and modules of fractions as preparation for working with sheaves. In the second part, he discusses polynomial rings in several variables with coefficients in the field of complex numbers. After Noether's normalization lemma and Hilbert's Nullstellensatz, the author introduces affine complex schemes and their morphisms; he then proves Zariski's main theorem and Chevalley's semi-continuity theorem. Finally, the author's detailed study of Weil and Cartier divisors provides a solid background for modern intersection theory. This is an excellent textbook for those who seek

an efficient and rapid introduction to the geometric applications of commutative algebra.

François Ozon Andrew Asibong,2021-06-15 Available in paperback for the first time, this is a full-length study of the films of François Ozon, director of such diverse films as *8 femmes*, *Swimming Pool*, *5x2* and *Les amants criminels*. Andrew Asibong's passionate and critical analysis focuses on the extent to which Ozon's seemingly light touch never ceases to engage with the fundamentally weighty issue of existential transformation, a transformation that affects both his protagonists and his audiences. A central question emerges: what is at stake, cinematically, ethically and politically, in Ozon's alternatively utopian and cynical flirtation with the construction and deconstruction of contemporary social relations. Revealing Ozon as a highly adept 'fan' of a whole range of thought, literature and cinema, Asibong places the precocious French auteur in an intellectual yet highly accessible critical framework, allowing Ozon's importance for a thoroughly postmodern filmgoing generation to be given the attention it deserves.

Friends of the Constitution Colleen A. Sheehan,Gary L. McDowell,1835 There were many writers other than John Jay, James Madison, and Alexander Hamilton who, in 1787 and 1788, argued for the Constitution's ratification. In a collection central to our understanding of the American founding, *Friends of the Constitution* brings together forty-nine of the most important of these other Federalists' writings. Colleen A. Sheehan is Professor of Political Science at Villanova University. Gary L. McDowell is the Tyler Haynes Interdisciplinary Professor of Leadership Studies, Political Science, and Law at the University of Richmond in Virginia. From 1992 to 2003 he was the Director of the Institute of United States Studies in the University of London.

Experiments with Mixtures John A. Cornell,1843 This guide shows how to design and set up mixture experiments, then analyze the data and draw inferences from the results. Virtually every technique that has appeared in the literature of mixtures can be found here and, for each method, computing formulas are provided with completely worked examples. Coverage begins with Scheffe lattice designs, introducing the use of independent variables and ends with the most current methods. Almost all of the numerical examples are taken from real experiments. It should serve as a supplementary text for courses on experimental design and statistical methods as well as a ready reference to important techniques for research workers in such fields as engineering, the physical sciences, agriculture and medicine.
