Continental Shelves of the World F.L. Chiocci ,A.R. Chivas ,2014-11-06 The world's continental shelves are the sites of vast resources of food, energy and minerals, the exploitation of which is continuously increasing. Fluctuating global sea levels throughout the Quaternary period produced multiple transgressive and regressive cycles that profoundly affected and shaped these shelves. The complex interactions among climate, sea level, tectonics, oceanography and sediment input have formed distinctive sediment packages on each shelf and provide a guide to the interpretation of older shelf sequences throughout the geological record. This Memoir compiles studies on 23 selected shelves from all the continents, focusing on their evolution and examining the patterns of sedimentation during the past approximately 125 000 years. In addition to providing basic background information for each area, the chapters consider specific aspects of continental shelf research, from seismic stratigraphy to geomorphology, from palaeoceanography to palaeo sea-level reconstruction and from palaeontology to geochemistry.

The Late Cenozoic of Patagonia and Tierra del Fuego J. Rabassa,2011-09-22 Written by highly qualified Argentine scientists and scholars, this book focuses on the uninterrupted geological and paleontological record of Patagonia and Tierra del Fuego since the Miocene-Pliocene boundary to the arrival of man and modern times. This region is an outstanding area for research, with significant interest at the international level. It provides an updated overview of the scientific work in all related fields with a strong paleoclimatic approach. Patagonia has also been a sort of a paleoclimatic bridge between the Antarctic Peninsula and the more northerly land masses, since the final opening of the Drake Passage in the middle Miocene. Timely and comprehensive, The Late Cenozoic of Patagonia and Tierra del Fuego is the only monograph book written in English.* One-stop resource for paleontological information of the Late Cenozoic of Patagonia* Covers 5 million years in the uninterrupted history of Patagonia and Tierra del Fuego* Comprehensive coverage of the region written by highly qualified

Evolution of an Andean Margin Suzanne Mahlburg Kay, Víctor A. Ramos, 2006-01-01 The objective of this volume is to examine the Cenozoic tectonic and magmatic evolution from the arc to the retroarc of a distinctive end-member of the Andean accretionary orogen between 35°S and 39°S. The evolution of the Andes in this region provides an outstanding case study of an orogen where periods of contraction and extension, crustal shortening and normal faulting, and differences in retroarc volcanism reflect a tectonic regime that alternates in space and time. Structural, magmatic, and paleogeographic patterns correlate strongly with the dynamics of the subduction zone. The region includes the Neuquén basin which is one of the most prolific of the Central Andes. The tectonic setting is important in understanding hydrocarbon systems of the sub-Andean basin and the potential for ore deposits in the cordillera. The book is fundamental for researchers working on tectonics and magmatism in Andean type systems as well as those involved in exploration.--Publisher's website.

The Economics of Natural Resources in Latin America Osmel E. Manzano M., Fernando Navajas, Andrew Powell, 2017-11-15 Revenues from commodities are extremely important for Latin America and the Caribbean, yet there is very little literature on the structure of these industries and on the various ways in which the state obtains commodity revenues. This book aims to understand the trade-off between the degree of taxation overall, the profitability of the relevant industry and the amount of investment and subsequent production in the region, as well as the relevance of institutions in the performance of the sector. This volume focuses on economic efficiency: where Latin America stands in terms of the current tax system for the extractive sector; how policies have changed in this regard; and how policies may be improved. The Economics of Natural Resources in Latin America is timely, since this new era of lower and volatile prices and possible reconfiguration of investment flows poses a challenge to natural resource tax systems in the world. The argument of the book will be made by a collection of papers around the issue of tax efficiency in the region and concludes with chapters on institutions and the role of transparency. This book shows that there are varieties of experiences in resource taxation and management of revenues in Latin America that could be used to shape policy interventions in other regions. This variety is not only related to their diverse impact on welfare, but also on the policy challenges faced by the countries in the region. This volume is well suited for those who study and find interest in development economics, political economy and public finance, as well as policy

Early Cretaceous Volcanism in Central and Eastern Argentina During Gondwana Break-Up Silvia Leonor Lagorio, Haroldo Vizán, Silvana Evangelina Geuna, 2016-03-23 This book analyzes the Early Cretaceous volcanic processes in Misiones Province and in Sierra Chica de Córdoba (Argentina). The volcanism in Misiones is tholeiitic and belongs to the Parana Magmatic Province (PMP), which extends throughout South America. In contrast, the volcanism in Córdoba is geographically restricted

and of alkaline nature, representing a potassic locality peripheral to the PMP. To understand the causes of and geodynamic processes involved in these volcanisms, a new $^{40}\text{Ar}/^{39}\text{Ar}$ of 129.6 ± 1 Ma of a trachyte from Sierra Chica de Córdoba is presented. This dating points out that the volcanism in Sierra Chica de Córdoba slightly postdates PMP lavas. Moreover, complementary geochemical analyses from Misiones Province are presented and compared with those from the whole PMP in order to characterize its source

History of the Geological Sciences in Argentina Victor A. Ramos,2025-05-23 The science of geology is intertwined with the growth of the field in Argentina. This book explores those dual historical developments and, as an expanded translation of *Historia de la Geología Argentina: Una Crónica de Más de Dos Siglos*, shares them with a global audience. Drawing on the author's extensive work throughout the country as well as documents and photographs from the archives of the National Geological Survey, General Archive of the Nation, and the universities of Buenos Aires, Córdoba, and La Plata, this book offers a once-in-a-century look at developments in the field of geology from a country-specific perspective.

Market-based Instruments for Environmental Policymaking in Latin America and the Caribbean Richard M. Huber,H. Jack Ruitenbeek,Ronaldo Seroa da Motta,1998 To preserve the environment with the lowest possible cost to the social sector means that private costs should be aligned with social costs. Many governments in the Latin American and Caribbean Region are doing this now using market-based instruments (MBIs). This publication investigates the use of MBIs in the Latin America and the Caribbean (LAC) context. The investigation covers a sample of eleven countries in the region and a cross-section of environmental issues in an urban setting.
