Michael Grossman

National Building Code of Canada 2020, 2022 The National Building Code of Canada 2020 (NBC), together with the National Plumbing Code of Canada 2020 (NPC), the National Fire Code of Canada 2020 (NFC) and the National Energy Code of Canada for Buildings 2020 (NECB), has been developed by the Canadian Commission on Building and Fire Codes (CCBFC) as an objective-based national model code that can be adopted by provincial and territorial governments. In Canada, provincial and territorial governments have the authority to enact legislation that regulates building design and construction within their jurisdictions. This may involve the adoption of the NBC without change or with modifications to suit local needs, and the enactment of other laws and regulations regarding building design and construction, including requirements for professional involvement. The NBC is a model code in the sense that it helps promote consistency among provincial and territorial building codes. Persons involved in the design or construction of a building should consult the provincial or territorial jurisdiction concerned to find out which building code is applicable. This edition of the NBC succeeds the 2015 edition.--Preface, v. 1, page v.

Guide to the Use of the Wind Load Provisions of ASCE 7-95 Kishor C. Mehta,Richard D. Marshall,1998-01-01 The objective of the Guide to the Use of the Wind Load Provisions of ASCE 7-95 is to provide guidance in the use of the wind load provisions set forth in ASCE Standard 7-95. The Guide is a completely new document because the wind load provisions underwent major changes from the previous ASCE Standard 7-88 (or ASCE 7-93). The Guide contains six example problems,

worked out in detail, which can provide direction to practicing professionals in assessing wind loads on a variety of buildings and other structures. Errata and Clarifications from the previous guide is also included.

Forensic Chemistry Michael Grossman, 2021-12-20 FORENSIC CHEMISTRY FUNDAMENTALS strives to help scientists & lawyers, & students, understand how their two disciplines come together for forensic science, in the contexts of analytical chemistry & related science more generally, and the common law systems of Canada, USA, UK, the Commonwealth. In this book, forensics is considered more generally than as only for criminal law; workplace health & safety, and other areas are included. And, two issues of Canadian legal process are argued as essays in the final two chapters.

Booze, Cigarettes, and Constitutional Dust-Ups Ryan Manucha, 2022-10-15 Gerard Comeau, a retiree living in rural New Brunswick, never thought his booze run would turn him into a Canadian hero. In 2012, after Comeau had driven to Quebec to purchase cheaper beer and crossed back into his home province, police officers participating in a low-stakes sting operation tailed and detained him, confiscated his haul, and levied a fine of less than \$300. Countries routinely engage in trade wars and erect barriers to protect domestic industries from foreign competition. Comeau, however, was detained by the full force of the law for engaging in commerce with a Canadian business on the other side of a domestic border. With Comeau's story as its starting point, *Booze, Cigarettes, and Constitutional Dust-Ups* tells the fascinating tale of Canadian interprovincial trade. Ryan Manucha examines the historical, political, and legal forces that gave rise to the regulation of interprovincial commerce in Canada, the trade-offs that come with liberalized domestic free trade, and Canada's enduring pursuit of economic union. The pandemic laid bare the vulnerability of global supply chains, the fickleness of foreign trading partners, and the surprising slipperiness of domestic trade. In a global climate of increasingly isolationist geopolitics, the history and possibility of Canada's economic union, quirks and all, deserve careful attention.

Modern Geotechnical Design Codes of Practice Patrick Arnold,Gordon A. Fenton,Michael A. Hicks,Timo Schweckendiek,Brian Simpson,2013 The ground is one of the most highly variable of engineering materials. It is therefore not surprising that geotechnical designs depend on local site conditions and local engineering experience. Engineering practices, relating to investigation and design methods site understanding and to safety levels acceptable to society, will therefore vary between different regions.The challenge in geotechnical engineering is to make use of worldwide geotechnical

experience, established over many years, to aid in the development and harmonization of geotechnical design codes. Given the significant uncertainties involved, empiricism and engineering
