Earthquakes and Multi-hazards Around the Pacific Rim, Vol. I Yongxian Zhang, Thomas Goebel, Zhigang Peng, Charles A. Williams, Mark Yoder, John B. Rundle, 2017-12-20 This is the first of two volumes devoted to earthquakes and multi-hazards around the Pacific Rim. The circum-Pacific seismic belt is home to roughly 80% of the world's largest earthquakes, making it the ideal location for investigating earthquakes and related hazards such as tsunamis and landslides. Gathering 16 papers that cover a range of topics related to multi-hazards, the book is divided into three sections: earthquake physics, earthquake simulation and data assimilation, and multi-hazard assessment and earthquake forecasting models. The first section includes papers on laboratory-derived rheological parameters as well as seismic studies in the Gulf of California and China. In turn, the second section includes papers on improvements in earthquake simulators as well as the statistical methods used to evaluate their performance, automated methods for determining fault slip using near-field interferometric data, variabilities in earthquake stress drops in California, and the use of social media data to supplement physical sensor data when estimating local earthquake intensity. The final section includes a paper on probabilistic tsunami hazard assessment, several papers on time-dependent seismic hazard analysis around the Pacific Rim, and a paper on induced and triggered seismicity at the Geysers geothermal field in California. Rapid advances are being made in our understanding of multi-hazards, as well as the range of tools used to investigate them. This volume provides a representative cross-section of how state-of-the-art knowledge and tools are currently being applied to multi-hazards around the Pacific Rim. The material here should be of interest to scientists involved in all areas of multi-hazards, particularly seismic and tsunami hazards. In addition, it offers a valuable resource for students in the geosciences, covering a broad spectrum of topics related to hazard research.

F*ck The Army! Lindsay Goss, 2024-06-18 Reveals the theatrical dimensions of civilian support for the revolutionary GI Movement of the 1960s-70s Performance played a role both crucial and complicated in the antiwar activism of the 1960s and 1970s. As soldiers and civilian actors, activists, and celebrities worked together to end the Vietnam War, their theatrical acts of solidarity and resistance connected liberation struggles across the lines of race, gender, enlisted status, and nationality. F*ck The Army! offers the first, fully narrated history of the FTA, an antiwar variety show featuring Jane Fonda that played to tens of thousands of active-duty troops over the course of nine months in 1971. From its very conception, the civilian-led show was directed towards the project of making visible the growing antiwar movement organized by GIs, inspired by but also acting as a rebuttal to the increasingly out-of-touch USO tours presented by Bob Hope. Through an analysis of the FTA's tactical performances of solidarity and resistance, Lindsay Goss brings into view the theatrical dimensions of the GI movement itself, revealing it as representative of the revolutionary and theatrical politics and tactics of the period. The volume highlights how, due to the movement's subsequent historical erasure, a renewed anti-theatricality emerged from the 1960s and became a potent feature of contemporary political discourse. The author's deft methodological and analytic strategies, in tandem with her elegantly accessible style demonstrate how seemingly little-known performance practices can activate consequential understandings of what we thought we knew about the recent past. At the same time, she encourages essential conversations about pressing contemporary issues that demand our attention. At its core, F*ck The Army! reveals the fundamentally theatrical character of radical activism when it seeks to challenge the status quo.

Cai, Miaoyong Zhu, 2025-09-15 In this book, the formation causes and the control principles of the surface crack defects of micro-alloyed steel slab, such as the transverse corner cracks, longitudinal depressions in the wide-face off-corners, and the hot charging cracks were discussed. On this basis, the key technologies for the slab surface defects control were proposed. The contents of the book included the control technology for the transverse corner crack of conventional and wide and thick slabs of micro-alloyed steel, the control technology for thin slab corner crack of micro-alloyed steel, the control technology for wide-face longitudinal off-corner depression of thick slab, as well as the control technology for hot charging crack of

micro-alloyed steel slab. This book can be read for the technical developers and scientific researchers engaged in slab continuous casting production of steel, and can also be used as a reference for teachers and students in colleges and universities of related majors.

Racial Politics in an Era of Transnational Citizenship Michael Chang,2004-01-01 Following 1996's Asian Donorgate campaign finance controversy, Chinese Americans, and by proxy all Asian Americans, were depicted in U.S. public discourse as foreigners subversively attempting to buy influence with U.S. politicians. Racial Politics in an Era of Transnational Citizenship asks, Will the perception of the Asian American as the perpetual foreigner continue to reproduce itself uncritically, heightening during times of media-supported nationalism? Scholar Michael Chang's incisive work contributes greatly to current debates on civil rights and on the meaning of citizenship and belonging among a transnational community and in a globalized world.

We would therefore like to thank the Program Committee and all reviewers. The program of this year reflects the current interests of the PCM's. The accepted papers cover a range of topics, including, all aspects of multimedia, both technical and artistic perspectives and both theoretical and practical issues. The PCM 2005 program covers tutorial sessions and plenary lectures as well as regular presentations in three tracks of oral sessions and a poster session in a single track. We have tried to expand the scope of PCM to the artistic papers which need not to be strictly technical.
