*Actividades de aprendizaje en la educación infantil* Jie-Qi Chen,2001 -Tomo II. Actividades de aprendizaje en la educación infantil. Por Jie-Qi CHEN, Emily ISBERG y Mara KRECHEVSKY. Este libro ofrece una colección de recursos curriculares que permitirán al profesorado aplicar en sus aulas la teoría de las inteligencias múltiples. Recoge actividades enriquecedoras de muy diversas disciplinas, desde la mecánica y la construcción hasta la psicomotricidad y la música.

**Ciencias naturales** ,2001 Los autores desarrollan distintas propuestas para una enseñanza de las ciencias naturales basada en la investigación en el aula. Partiendo de una mirada que articula el modo de conocer que propone la ciencia y los procesos de aprendizaje escolar, este libro pretende acercarles a los docentes propuestas y reflexiones para recorrer, junto con los estudiantes, el fascinante camino de conocer e indagar el mundo natural. En cada capítulo se encontrarán actividades que apuntan a estimular la curiosidad, la capacidad de hacer preguntas y proponer explicaciones, la búsqueda de respuestas a través del diseño y la realización de experimentos, y el debate colectivo para que aprender a investigar en la escuela pueda convertirse en una aventura maravillosa.

**Cómo fabricar un gas y otros experimentos raros que hago a veces** Gabriel León,2022-11-03 Un nuevo formato para la serie middle grade de ciencia más divertida. Pachi y su papá científico vuelven con una serie de aventuras que surgen a partir de preguntas raras. ¿Es posible fabricar un gas desde cero?, ¿el agua salada pesa más que el agua dulce? Descubre las respuestas a estas superinterrogantes de la manera más divertida: icon experimentos! Y la mejor parte es que puedes convertir tu casa en un laboratorio con cosas que de seguro tienes en la despensa.

*Experimentamos con la ciencia* Tracy-ann Aston,2018-02-13 Este libro, increíblemente accesible, está pensado para que cualquier docente, parent, madre o monitor de tiempo libre que busque estimular y divertir a los niños y niñas, pueda sumergirles en el mundo de la Ciencia. Con estos 100 experimentos científicos, tanto clásicos como innovadores, se pretende fomentar el atractivo de este ámbito esencial de la vida, a través del trabajo en grupo y el espíritu crítico. Los estudiantes descubrirán, por sí mismos o en colaboración con otros, los principios científicos básicos en contextos relevantes y significativos. Además, los jóvenes científicos desarrollarán habilidades básicas y prácticas como la observación, la medición, la recopilación de datos, la comunicación... todas ellas transversales a otras muchas áreas de conocimiento presentes en el

currículum. Cada experimento consta de los siguientes apartados: objetivos, conocimientos previos, materiales, seguridad y apuntes técnicos, desarrollo, posibilidades de individualización y profundización. Al final del libro se incluye un índice de contenidos científicos, donde se reflejan los temas que se exploran con cada experimento, entre los que se encuentran: los seres vivos, los materiales cotidianos y su uso, las propiedades, cambios y estados de la materia, el sonido, la luz y la electricidad.

**Algo más que locos experimentos en la escuela** Nancy Fernández,2024-03-27 ¿Cómo acercar a los niños y jóvenes al maravilloso mundo de la ciencia? Si bien enseñar ciencias naturales no se reduce a hacer experimentos, el laboratorio (o el aula, transformada en laboratorio) constituye un recurso de gran valor para que los alumnos se apropien de contenidos científicos. La obra incluye 100 experiencias para abordar diferentes ejes temáticos, una fundamentación didáctica acerca de la importancia de los trabajos prácticos de laboratorio y el análisis de ejemplos de diseños experimentales elaborados por educadores. De este modo, se propicia que los contenidos resulten atractivos para los estudiantes, y los docentes cuenten con un soporte teórico sólido, sencillo y coherente. En los anexos, el lector encontrará recomendaciones acerca de la infraestructura, las normas de seguridad e higiene, el equipamiento básico y los materiales necesarios para organizar un laboratorio escolar. El contenido del libro propone favorecer la motivación, enseñar técnicas específicas, promover actitudes vinculadas con la investigación y desarrollar una visión no estereotipada de la ciencia.

Enseñar distinto Melina Furman,2021-08-25 ¿Cuánto tiempo hemos dedicado a estudiar y hasta a enseñar temas que no terminamos de entender? ¿A repetir como loros? ¿Cuánto del trabajo escolar está dedicado a producir conocimiento inerte, ese que queda en el arcón de la memoria pero luego no logramos usar? ¿Y qué podemos hacer para evitarlo? ¿Cómo aprovechar los muchos años en que tenemos a chicas, chicos, adolescentes y jóvenes en la educación formal? ¿Cómo darles herramientas y despertarles el deseo y la voluntad para seguir aprendiendo durante toda la vida? En definitiva: ¿cómo enseñar distinto? Con la meta en el aprendizaje profundo, Enseñar distinto propone un recorrido sustancioso que abarca tanto los grandes desafíos como las situaciones del día a día de los educadores de todos los niveles; un recorrido lleno de estrategias y ejemplos que traducen un sólido conocimiento del campo teórico en consejos de enseñanza. Paso a paso, enfoca qué enseñar, cómo priorizar contenidos, cómo motivar a los estudiantes y planificar secuencias que les den protagonismo. Hacer buenas preguntas y crear rutinas de pensamiento son premisas fundamentales en este camino, así como promover la metacognición y ofrecer un feedback valioso. Para llegar a puerto, por fin, no es posible eludir la evaluación tan temida; la buena noticia es que, bien pensada, es una excelente aliada para el aprendizaje. Con una mirada creativa y sensata, rigurosa

y fresca, la reconocida experta en formación docente Melina Furman abre el puño y nos regala un enorme tesoro de herramientas concretas para potenciarnos como docentes transformadores. Buscando enseñar distinto a como enseñábamos ayer, en un camino de mejora continua. Desde donde estamos, con lo que sabemos y con lo que tenemos. Para que, desde ahí, podamos ir mucho más lejos.

**Ciencias en Pisa** Instituto de Evaluación (Espagne), 2010 Los profesores, alumnos, padres equipos directivos, gobiernos y público en general necesitan buena información sobre el sistema educativo y cómo éste prepara a los alumnos para enfrentarse a su futura vida personal y laboral. Las preguntas de ciencias en PISA intentan evaluar hasta qué punto los alumnos aplican algún tipo de pensamiento científico a las situaciones que puedan encontrarse en sus vidas cotidianas. Para contestarlas los alumnos emplean sus conocimientos y capacidades adquiridos tanto dentro como fuera del contexto escolar, mostrando su nivel de competencia en esa área determinada. Se distinguen tres dimensiones para la evaluación de las ciencias: conceptos, procesos y situaciones. El diseño de la prueba PISA permite usar técnicas estadísticas para estimar a la vez el rendimiento de los alumnos y la dificultad de las preguntas contestadas.

New Beer in an Old Bottle. Eduard Buchner and the Growth of Biochemical Knowledge Athel Cornish-Bawden, 1997 We should commemorate the centenary of Buchner's discovery not only because of its inherent importance and interest, but also because vitalist ways of thinking have by no means disappeared, and modern biologists need to be constantly on their guard against them. Far worse than vitalism, which in Pasteur's hands was, after all, based on rational interpretation of apparently coherent observations, the past few decades have seen the return of obscurantist mysticism in the form of so-called "creation science" and other abuses of the intellect. Forgetting the history of biology is no way to combat these, and they provide another reason why it is worthwhile to recall how our current ideas came into existence.

**Química en infantil y primaria** Mercè Izquierdo Aymerich, Jesús Chivite Pérez, Núria García Alsina, Neus Garriga Verdaguer, Núria López Rebollal, Pilar Melcón Martínez, M. Dolores Muns Mayans, Isabel Muñoz Moreno, Montserrat Padern Blesa, Montserrat Pedreira Álvarez, Aida Basora Zanón, Teresa Pigrau Solé, Rosa M. Tarín Martínez, Josep Maria Vidal Polo, Roser Ylla Ibore, Teresa Calveras i Barniol, Victòria Carbó Cortina, 2012-05-29 Este libro muestra una selección de experiencias llevadas a cabo en diferentes escuelas de educación infantil y primaria para maestros interesados en fomentar en su alumnado conceptos químicos a partir de experiencias cotidianas que, a veces, no se analizan directamente desde esta perspectiva (la fiesta de la castañada, los caramelos que recogimos en una cabalgata, el mosto que nos llevamos de las colonias, el pan hecho y cocido en el horno de la escuela, los helados que hicimos sin congelador...) pero que demuestran cómo la química contribuye a comprender y gestionar con responsabilidad el mundo que compartimos.

**¿Cómo funciona una célula? Fisiología celular** Antonio Peña,2013-01-21 El doctor Peña procura acercar al lector al conocimiento de algunas de las funciones generales de las células, de modo que pueda asomarse al mundo maravilloso de las estructuras y las funciones tan extraordinarias que tienen cabida en un espacio tan pequeño, y que comprenden una serie gigantesca de transformaciones químicas y gran número de interacciones entre moléculas, mundo en el cual no es posible diferenciar entre la bioquímica, la biología molecular y la fisiología de las células.

**Experiencias** Bárbara de Aymerich,2021-03-10 Experiencias ofrece un montón de experimentos en los que se mezclan la química, la física, la biología, la arqueología, las matemáticas o la astronomía, para que aprendas y te diviertas, para que compartas actividades en familia o con los compañeros del colegio. Da igual que tengas 7 años, 10, 14... no son experimentos complicados, podrás hacerlos! Pero, eso sí, has de tener paciencia y ser muy cuidadoso, como los verdaderos científicos. - La nieve artificial - Comida para astronautas - Un volcán en tu salita - Experimentando con las buenas vibraciones - Cómo identificar huellas digitales humanas y de animales Un libro que te ayudará a comprender cómo funciona el mundo en el que vives. ¡Investiga y verás lo maravilloso que es!

Pasteur: Vida y obra Martínez Báez, Manuel,2023-07-17 Antes de cumplir los 30 años, Louis Pasteur había hecho descubrimientos que serían fundamentales para la estereoquímica, y no había alcanzado los 60 cuando los sabios lo aclamaban como uno de los máximos benefactores de la humanidad. Este libro estudia la vida de Pasteur y relata cómo sus aportaciones a diversas ciencias -muy concretamente a la medicina- fueron fruto de investigaciones efectuadas con un rigor y un discernimiento acaso nunca igualados.

Agricultura Sagrada Dennis Klocek,2023-09-18 Dennis Klocek explora la esencia de la agricultura biodinámica, en particular la naturaleza del desarrollo interno necesario para utilizar dichos métodos de manera efectiva. Nos dice que la biodinámica requiere un autodesarrollo constante y un conocimiento y una relación íntima con las plantas, los animales, el clima, la tierra, los preparados y mucho más. Basado en numerosas conferencias presentadas a jardineros, agricultores y enólogos biodinámicos serios, el autor presenta sus puntos de vista dentro de una estructura de observación goetheana, lenguaje alquímico y los cuatro elementos clásicos, todos basados en el trabajo de Rudolf Steiner y otros pioneros en este campo. , así como sus muchos años de interés en los métodos biodinámicos, tanto conceptuales como prácticos. Este no es un

libro de recetas y técnicas prácticas, sino una guía de los medios internos para trabajar con la naturaleza elemental de la tierra, que muestra formas de leer en la naturaleza lo que se necesita. Incluye más de 150 fotografías e ilustraciones. Detalles del libro Muchas personas que se topan con los conceptos de la Biodinámica por primera vez sienten que están entrando en una visión del mundo alternativa respecto de las prácticas agrícolas. Una desconcertante variedad de términos como reino etérico, fuerza cósmica, calor vivo o estiércol cuerno puede hacer que una persona se aleje de una fuente notable de conocimientos sobre los secretos de las relaciones entre el suelo, las plantas y los animales. Esto es una gran vergüenza ya que una vez entendidos, estos términos iluminan con precisión las paradojas más desconcertantes de las ciencias contemporáneas del suelo y las plantas. La fusión de las ciencias naturales contemporáneas con los conocimientos espirituales que surgen de las capacidades clarividentes de Rudolf Steiner añade un tremendo poder creativo al trabajo en la tierra y a la investigación de las influencias más sutiles que actúan en el orden natural. Dennis Klocek, un jardinero, alquimista e investigador del clima biodinámico de toda la vida, ha dado muchas conferencias cuyo objetivo es alinear la ciencia contemporánea con los aspectos más arcanos de la teoría y la práctica biodinámica. Si buscas profundizar la agricultura con la biodinámica y que no sean solo aplicar recetas este libro es para vos!!!
