**Reflection** Lyngdoh Peinlang,2020-01-15 We all read books and we all fall in love with some particular books as we read them. But we do not read all the books. There are many reasons why we read a particular book. One day this thought came to my mind. Just as we select books to read we also choose a love partner. There are many ways in which we can compare between how we choose to read a book and how we choose our life partner. The following are some of the steps involved when choosing a book which we can apply the same while choosing our life partner.

Just Add Water Clay Marzo,Robert Yehling,2015 From the best freestyle surfer in the world, an inspiring and moving memoir about his ascendance to the top of the surfing world while struggling for most of his young life with undiagnosed Asperger's syndrome Clay Marzo has an almost preternatural gift with a surfboard. From his first moments underwater (he learned to swim at two months old) to his first ventures atop his father's surfboard as a toddler, it was obvious that Marzo's single-minded focus on all things surfing was unique. But not until late in his teens, when this surfing phenom was diagnosed with Asperger's syndrome, did the deeper reasons for his obsession--and his astonishing gift for surfing--become clear. Just Add Water is the remarkable story of Marzo's rise to the top of the pro surfing world--and the personal trials he overcame in making it there. Marzo endured a difficult childhood. He was a colicky baby who his mother found could be soothed only with water. Later, as he entered school, his undiagnosed Asperger's made it tough for him to relate to his peers and fit in, but his relationship with the wave was elemental. Marzo could always turn to surfing, the only place where he truly felt at peace. Unflinching and inspiring,Just Add Water is a brave memoir from a one-of-a-kind surfing savant who has electrified fans around the world with his gift and whose story speaks boldly to the hope and ultimate triumph of the human spirit.

**Self-organized Motion** Satoshi Nakata,Véronique Pimienta,István Lagzi,Hiroyuki Kitahata,Nobuhiko J

Suematsu,2018-11-01 Self-propelled objects (particles, droplets) are autonomous agents that can convert energy from the environment into motion. These motions include nonlinear behaviour such as oscillations, synchronization, bifurcation, and pattern formation. In recent years, there has been much interest in self-propelled objects for their potential role in mass transport or their use as carriers in confined spaces. An improved understanding of self-organized motion has even allowed researchers to design objects for specific motion. This book gives an overview of the principles of self-propelled motion in chemical objects (particles, droplets) far from their thermodynamic equilibrium, at various spatial scales. Theoretical aspects, the characteristics of the motion and the design procedures of such systems are discussed from the viewpoint of nonlinear dynamics and examples of applications for these nonlinear systems are provided. This book is suitable for researchers and graduate students interested in physical and theoretical chemistry as well as soft matter.
