**Geometry of Algebraic Curves** Enrico Arbarello, Maurizio Cornalba, Phillip Griffiths, 2011-03-10 The second volume of the Geometry of Algebraic Curves is devoted to the foundations of the theory of moduli of algebraic curves. Its authors are research mathematicians who have actively participated in the development of the Geometry of Algebraic Curves. The subject is an extremely fertile and active one, both within the mathematical community and at the interface with the theoretical physics community. The approach is unique in its blending of algebro-geometric, complex analytic and topological/combinatorial methods. It treats important topics such as Teichmüller theory, the cellular decomposition of moduli and its consequences and the Witten conjecture. The careful and comprehensive presentation of the material is of value to students who wish to learn the subject and to experts as a reference source. The first volume appeared 1985 as vol. 267 of the same series.

**Redundant Inertial Measurement Unit Reconfiguration and Trajectory Replanning of Launch Vehicle** Xuefeng Li, Fan Xu, Guoqiang Xu, 2022-09-22 This book analyzes the problems to be solved urgently in the development of launch vehicle control system. The techniques of redundant Inertial Measurement Unit (IMU) reconfiguration and trajectory replanning are proposed aiming at the inertial device failures and power system failures during flight of launch vehicles,

respectively. It introduces the background of redundant IMU reconfiguration and trajectory replanning technologies and models of launch vehicle dynamics and redundant strap-down IMUs. The approaches for redundant strap-down IMU fault detection, reconfiguration and trajectory replanning are proposed, putting forward a prospect for the development of launch vehicle control system. The content of this book is concise and highly pragmatic. It could serve as a reference for engineers and researchers engaged in the analysis, design and verification of launch vehicle control systems and also as a reference for graduate students and senior undergraduates majoring in navigation, guidance and control.

*Satellite Scheduling Engine* Yonghao Du, Lining Xing, Lei Li, 2025-03-31 Since the 21st century, national aerospace industry has developed rapidly with an explosive increase in satellites. To coordinate the in-orbit satellites and their management resources for better social, economic, and military applications, the satellite task scheduling is required. As the satellite management and application manners change over the years, cross-agency and cross-model have become the new normal, and the integration and quick-response have become the new requirements. Under such circumstances, the one satellite, one system shortcoming in system development and application occurs, while those systems that differ in agencies, modes, and types cannot accommodate each other; hence, the generality of satellite scheduling models and algorithm must be strengthened. To address the one satellite, one system shortcoming, the cooperative, flexible, efficient applications, and the monopoly of the U.S. STK/Scheduler, a Satellite Task Scheduling Engine that contains general-purpose modeling and optimization methods is studied in this book.
