Increasing Motorcycle Conspicuity Lars Rößger, Michael G. Lenné, 2017-03-02 It's a widely recognised trend that powered-two-wheelers' (PTWs) use has been steadily increasing and is projected to increase further. While providing benefits to the community in the form of reduced traffic congestion and environmental benefits, the risks to PTW riders remain and visibility will always be a key issue. *Increasing Motorcycle Conspicuity* aims to illustrate how driving simulation, field studies and laboratory experiments can be used to improve rider safety through the design and evaluation of a range of safety measures. The book outlines the factors that contribute to PTW visibility and detection by car drivers, and presents case studies to illustrate how the various methods can be used to explore the contribution of these factors. The final chapter of the book highlights the utility of a simulation-based approach to improving PTW safety and discusses this method's future applications. The case studies collected within the volume cover phases of the design of conspicuity treatments and provide a broad spectrum of empirical strategies for assessing the interventions. The book is most directly relevant to researchers and applied scientists from the fields of traffic/transportation psychology and human factors, as well as to practitioners from the traffic safety sector.

Human Safety and Risk Management A. Ian Glendon, Sharon Clarke, 2018-10-09 The third edition of a bestseller, *Human Safety and Risk Management: A Psychological Perspective* incorporates a decade of new research and development to provide you with a comprehensive and contemporary guide to the psychology of risk and workplace safety. A major enhancement is reflected in the new subtitle for the book, *A Psychological Perspective*, which highlights both the expertise of the authors and also confirms the predominantly psychological orientation of the revised text. New in the Third Edition: State-of-the-art theory reviews, research findings, and practical applications New chapter on impact that sensor technologies have on approaches to safety and risk in contemporary society Enhanced chapters on key issues around sensing danger, risk perception, error detection, safety culture, risk management, leadership, teams, and stress management This book discusses how people perceive and manage risks and how to make the workplace a safer place. It examines the influence of individual

factors on safety, as well as team and organizational factors at work, from a psychological perspective. It also highlights changes in safety due to the changing workplace, globalization, and managing employees' safety and health beyond the workplace — a challenge that many organizations have yet to address. Reflecting current scientific research across a range of disciplines as it applies to human safety and risk management, this book helps you meet the challenges posed by the rapidly evolving workplace.

Motorcycle Accident Reconstruction Nathan A Rose, William TC Neale, 2018-12-20 In a recent National Highway Traffic Safety Administration (NHTSA) report, about one out of every 7 fatalities on the road involved a motorcycle. It is clear that motorcyclists are more vulnerable and much more likely to be injured or killed in a crash than are passengers in a car accident. Motorcycle Accident Reconstruction purposefully pulls together as much of the relevant accident reconstruction literature and science as possible to present definitive literature that meets the needs of the crash reconstruction industry. The reader will learn to analyze physical evidence, understand what it means, and how to incorporate math and physics into an investigation. Topics featured in this book include: Case studies utilizing event data recorder data Photogrammetry analysis Determining motorcycle speed at the time of an accident The book provides a unique roadmap for the motorcycle accident reconstructionist user. It is written by two specialists in this field who provide analyses of physical factors that affect motorcycle visibility, motorcycle usage at night, and human factors in motorcycle crashes - to the greater understanding of crash analysts, consultants and safety engineers alike.

Motorcycle and Safety Barrier Crash-testing Chantel Duncan,2000 This report has been prepared by the Monash University Accident Research Centre. It constitutes the first stage of a potential multi-stage project and takes the form of a feasibility study of motorcycle and safety barrier crash-testing. Road safety barriers are designed to enhance the safety of the road infrastructure by containing errant vehicles and reducing the severity of off-path collisions. Experience indicates that conventional barrier systems used in accordance with specific guidelines have performed well in protecting the occupants of passenger cars. However, their effects on the safety of motorcyclists, is somewhat problematic. Given the limited available information on motorcycle-barrier interactions, and the lack of established procedures for motorcycle crash-testing, ATSB commissioned a preliminary investigation of relevant issues. This report is the principal output of these preliminary investigations. The main purpose of this initial work was to recommend a research method for investigating the interactions between motorcycles and road safety barriers. Specific objectives were to: identify barrier design issues likely to impact on motorcycle rider safety; identify relevant rider injury mechanisms; identify and assess the feasibility of research methods for investigating interactions between motorcycles and safety barriers; recommend a research program, addressing the overall aims described above. The study has involved a review of the international literature on relevant topics, analysis of motorcycle crash records, and consultation with technical experts and key stakeholders in three States.
