Macizos de anclaje, tablestacados y muros pantalla Marcel Reimbert, André Reimbert, 1976

Teoría, historia y restauración de Estructuras de fábrica Jacques Heyman, 2007 Este libro recopila, por vez primera, los ensayos del profesor Heyman sobre el funcionamiento de las estructuras de fábrica. Corresponde al profesor Heyman el mérito de haber traducido las teorías y teoremas del análisis límite a las fábricas. Esto supone, sin pérdida de rigor, una simplificación importante del aparato teórico pero, sobre todo, permite una compresión cualitativa (y cuantitativa) del funcionamiento de estas construcciones. Así, es posible entender por qué las catedrales góticas tienen arbotantes, cuál es la función de los nervios de las bóvedas de crucería o cómo se comportan los puentes de piedra. Aún más, permite explicar la enorme estabilidad de las antiguas fábricas (el Panteón de Roma lleva en pie casi dos milenios sin reparaciones de importancia; Santa Sofía soporta desde el siglo VI sismos de importancia; los puentes romanos transportan cargas muy superiores a las de su época, etc.). Además, el análisis límite de las fábricas, permite interpretar correctamente y sin alarmismos la presencia, inevitable en estas construcciones, de grietas. Éstas no son, necesariamente, signos de ruina; simplemente expresan la naturaleza del material y la adaptación del edificio a los pequeños movimientos del entorno. En resumen, el libro es un manual de las estructuras de fábrica y mejorará el conocimiento sobre nuestro patrimonio construido.

Muros de contención José Barros Pena, 2007-11 Muros de hormigón armado, en masa y mampostería. Estudio del terrero y del muro. Sobrecargas. Terrenos sumergidos. Drenaje.

Maquinaria general en obras y movimientos de tierra Paul Galabru, 2021-01-10 El Tratado de Procedimientos Generales de Construcción tiene por objeto el estudio de las reglas técnicas y métodos de trabajo que condicionan la ejecución de las obras públicas. Este Tratado está también estrechamente relacionado con los cursos de Derecho administrativo y Economía política, pues la ejecución de las obras exige, de una parte, el estudio y la redacción de los proyectos, y de otra la preparación de presupuestos y liquidaciones, algunas de las cuales toman a veces un carácter contencioso.

Muros de contención Jose Barros, José Barros Pena, 1989

Tratado de Construcción. Lo que debe saber el proyectista Enrique Rodón, 1978-10 Este es un libro práctico para el estudiante y el proyectista que se inicia en la construcción, exponiendo con la mayor claridad posible, la forma de proceder en cada uno de los problemas constructivos que se le puedan presentar, indicándole para ello las fórmulas o métodos que

debe emplear, los cuales han sido, la mayoría de ellos extraídos de libros especializados en las distintas materias, en alguno de los casos con bastante dificultad para llegar a las citadas fórmulas o métodos que debía emplear.

Fundamentos de mecánica del suelo, proyecto de muros y cimentaciones Daniel Graux, 1975

El terreno Matilde González Caballero, 2001 El terreno es el resultado de la labor de recopilación y síntesis a partir de la experiencia docente de la autora en las asignaturas de Mecánica del Suelo y Cimentaciones, Geotécnica básica en Arquitectura, Fonamentacions Profundes y El terreno, impartidas a lo largo de los últimos 19 años. En esencia, comprende los fundamentos de la mecánica del suelo aplicables a la práctica de proyectos y a la dirección de obras en el ámbito de la arquitectura. Se distribuye en 11 diferentes temas. Los tres primeros son de presentación, nomenclatura de los suelos y sus principales características, clasificaciones, influencia de la existencia del agua, problemas de licuefacción, consolidación, etc. El tema 4 se adentra en el comportamiento tensodeformacional. El tema 5 se dedica en particular a las técnicas de reconocimiento del suelo. El tema 6 trata de la teoría de empujes de tierras y elementos de contención rígidos y los temas 8, 9 y 11 abordan la aplicación a las cimentaciones, superficiales (8) y profundas, con pilotajes (9) y muros pantalla (11), y el tema 10 se centra en los asientos y en las principales teorías para su determinación. Se han pretendido recopilar las teorías más ampliamente aceptadas en la actualidad. Se incluyen valores tipo y tablas de las correlaciones más usuales en la práctica entre parámetros relativos al suelo. Asimismo, en el anexo se dan algunos ejercicios prácticos, relativos a cada tema. Con esos 11 temas se puede facilitar una comprensión mayor de la información geotécnica que se necesita habitualmente en la aplicación al diseño y al cálculo de cimentaciones.

Manual de campo para la ordenacion de cuencas hidrograficas: diseno y construccion de caminos en cuencas hidrograficas fragiles, 1990

Estabilidad de las construcciones José Creixell M., 1992

Control de ejecución de estructuras Sara Elena Menéndez Fernández, Yolanda Velasco Antuña, 2005-11 Este libro - tercer módulo formativo de los seis Manuales prácticos para la formación del encargado en obra de edificación- analiza las estructuras de hormigón armado en edificación. Realiza un pormenorizado estudio de la estructura de la obra como una de las partes fundamentales de cualquier construcción, desarrollando desde el armado de cada elemento hasta su desencofrado final. Su contenido formativo se ha estructurado en diecinueve unidades didácticas: Las cinco primeras se destinan a conocer el hormigón, identificando sus componentes, propiedades y aplicaciones principales{ en las tres unidades siguientes se estudia cómo se arman todos los elementos de la estructura, empezando por la cimentación y terminando con los forjados{ posteriormente se dedican siete unidades al encofrado, definiendo cuáles son sus principales tipos, características y puesta en obra y, finalmente, la última parte analiza los prefabricados de hormigón, algunos tipos especiales de encofrado -como los deslizantes- y se estudia cómo se debe organizar correctamente la obra explicando en qué consiste la medición y el

presupuesto de un proyecto. Los contenidos, que se orientan a favorecer el aprendizaje de los profesionales, se presentan de forma para que sean accesibles y suficientemente aclaratorios por sí mismos. Al final de la unidad didáctica, apoyando el proceso de aprendizaje, se pueden realizar unos ejercicios de autoevaluación, coherentes con los objetivos iniciales marcados, cuyas soluciones se presentan al final del libro. Por último, y con la intención de incrementar la vertiente pedagógica y facilitar el estudio de los contenidos, se utilizan elementos visuales de refuerzo, como ladillos, recuerdes, esquemas e ilustraciones.

Elementos de topografía y construcción Fernando López Gayarre, 2002 El presente libro pretende ser un texto didáctico de apoyo a las explicaciones teóricas y prácticas impartidas en asignaturas del área de Ingeniería de la Construcción. En una primera parte, dedicada a la Topografía, se incluyen inicialmente los fundamentos básicos necesarios para iniciarse en el estudio de la misma. Con posterioridad se describe el instrumental que habitualmente se utiliza y se explican los métodos más empleados en trabajos de planimetría, altimetría y taquimetría. Finaliza con dos temas de introducción a la fotogrametría y al sistema de posicionamiento global GPS. La parte dedicada a la Construcción se compone de varios capítulos dedicados al estudio de los diferentes materiales utilizados. Cabe destacar los temas dedicados al estudio del hormigón. En los últimos capítulos se exponen conocimientos básicos sobre terrenos, cimentaciones y muros de contención.

Administración técnica de la obra, 2001

Cimentaciones Y Estructuras de Hormigón Armado Pablo Padilla, 1970

Las técnicas constructivas de la arquitectura pública de Augusta Emerita Antonio Pizzo, 2010-12-15 El objetivo principal de esta obra ha sido la sistematización tipológica de las técnicas constructivas de los edificios públicos de Augusta Emerita, según un sistema de registro que utiliza los instrumentos metodológicos de la arqueología de la arquitectura para el análisis de las características formales y técnicas. Esencialmente, consiste en el examen técnico de las obras históricas de carácter público sobre la base de la creación de tipologías restringidas a ámbitos territoriales regionales, a partir de los análisis estratigráficos de los paramentos

Construcción de la Estructura de Hormigón Armado.(2E) Eduardo Medina Sánchez, 2007

Mediciones y presupuestos Fernando Valderrama, 2007 Este libro tiene como objetivo fundamental enseñar a realizar mediciones y presupuestos tanto a los alumnos de arquitectura, arquitectura técnica e ingeniería como a los profesionales con poca experiencia. Pero para alcanzar ese objetivo es imprescindible describir los restantes documentos escritos, variantes y complementos requeridos actualmente por un proyecto, es decir, todo aquello que se entrega habitualmente en formato DIN-A4, como la memoria y el pliego de condiciones. Este libro considera que una parte importante del trabajo del profesional de la edificación se realiza antes, durante y después del proyecto; considera que el proyecto no es sólo una serie de planos con una memoria que los justifica, sino que todos sus documentos deben mantener un punto de vista integrado;

demuestra que el presupuesto es una parte interesante, y no burocrática, del proyecto, que aporta valor al profesional y mejora la calidad de la construcción. Este libro se centra en el aprendizaje de los procesos y no en los contenidos concretos, es decir, no enseña a medir redondos o tabiques, pero dice cómo se aprende; se ciñe a la normativa vigente, identifica el origen de sus criterios y se pregunta sobre el objetivo de cada tarea, en lugar de dogmatizar sobre la forma de hacerla; está expresamente preparado para ser utilizado en los sistemas de enseñanza activa promovidos dentro del Espacio Europeo de Educación Superior; puede ser un libro de texto o un libro para el profesional que apenas estudió estos temas en la carrera, y que cree que hay vida más allá de los planos.

Hormigón armado Alfredo Páez, 1986 Destacan en este libro, por la originalidad en su planteamiento y la novedad de sus conclusiones, los temas relativos a los esfuerzos cortantes combinados con la flexión, la fatiga por cargas repetidas y el pandeo lateral en vigas, la incidencia de las deformaciones diferidas en la estabilidad de las columnas esbeltas, y los procedimientos numéricos simplificados para evaluar el margen de seguridad apropiado a las distintas piezas de la estructura que se considera.

Construcción F. Cassinello, Fernando Cassinello Pérez, 1996 El libro de Hormigonería de Fernando Cassinello, que fue catedrático de la Escuela de Arquitectura de Madrid, es un clásico. Escrito en los años setenta ha sido desde entonces un manual de referencia sobre las aplicaciones del hormigón armado en la edificación. A pesar del tiempo transcurrido las observaciones y comentarios sobre la ejecución, puesta en obra y, sobre todo, sobre las posibilidades plásticas del hormigón armado, tienen hoy plena vigencia. El libro contiene fotografías de numerosas construcciones notables, puentes y edificios, en proceso de ejecución. En definitiva, la reedición pone a disposición de arquitectos e ingenieros un libro útil y sugerente.
