Environmental Toxicology And Human Health - Volume I Tetsuo Satoh, 2009-03-24 Environmental Toxicology and Human Health is a component of Encyclopedia of Environmental and Ecological Sciences, Engineering and Technology

Resources in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. Toxicology is the study of harmful effects of chemicals on biological systems. Humans, animals, and plants are increasingly being exposed to chemicals in the environment. The ever-increasing use of chemicals in industries has also resulted in further pollution of the environment. As toxic chemicals are widespread in the environment, there is a potential for these chemicals to cause significant damage and harmful effects on human health. The volume on Environmental Toxicology and Human Health discusses matters of great relevance to our world such as: Environmental Toxicology and Human Health; Health Effects from Exposure to Acute Levels of Industrial Chemicals; Health Effects from Exposure to Chronic Levels of Industrial Chemicals; Control Strategies; Pediatric Lead Poisoning of Residential Origin; Insecticides; Herbicides; Rodenticides; Virus-Induced Diseases; Fungus and Actinomycete-Induced Diseases; Sportfish Consumption: Socio-Cultural and Economic Aspects, Ethnicity and Effectiveness of Health Advisories; Impact of Socioeconomic Factors on Residential Indoor Air Quality and Human Health; Social Concerns for Environmental Exposures to Toxic Substances; Environmental Justice as a Component of Environmental Decision-Making; Minamata Disease in Japan; Mercury-Contaminated Grain in Iraq; Case Study of Air Pollution Episodes in Meuse Valley of Belgium, Donora of Pennsylvania, and London, U.K.; Case Study of the Bhopal Incident; Case Study of Lyme Disease; Case History: Ebola Hemorrhagic Fever in Zaire, 1995; Case Studies of Anthrax Outbreaks; Case Study of Health Effects of Cryptosporidium in Drinking Water. Textbook Of Occupational Medicine Practice (2nd Edition) Kee Seng Chia, J Jeyaratnam, David Soo Quee Koh, 2001-07-20 Latest Edition: Textbook of Occupational Medicine Practice (4th Edition) This book provides a link between occupational health and clinical practice. Besides being a valuable starting point for health professionals with an interest in occupational medicine as well as those intending to specialize in occupational medicine, the book will be a useful guide for all those who are interested in occupational medicine practice, including medical students at various levels, occupational health nurses, general practitioners, and more senior professionals in occupational medicine. In other words, it is for all who have committed themselves to the best practice for the health of working people. The first edition is now used in occupational health training courses in several countries, such as Singapore, Malaysia, Indonesia, Vietnam and Jordan. The second edition is an extensively revised and updated version, with several new contributors and new material. The contributors are a mix of

international and regional occupational health specialists and clinicians. The contents of the book have been streamlined to appear in two sections. The editors have retained the approach of examining occupational health issues and concerns from the standpoint of clinical presentations of the different organ systems. Clinically oriented chapters form Section 1. Section 2 comprises other issues of special interest to occupational health practitioners, such as screening and routine medical examinations, health promotion at the workplace, assessment of disability for compensation, medical planning and management of industrial disasters, and prevention of occupational diseases. Several changes have directly resulted from feedback from readers of the first edition. Among them are the inclusion of new chapters on occupational infections, the health of corporate travelers, shiftwork, and occupational health standards and legislation. As before, case studies have been incorporated in the chapters to make clear the relevant issues.

Acute Exposure Guideline Levels for Selected Airborne Chemicals National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Toxicology, Committee on Acute Exposure Guideline Levels, 2007-03-27 In 1993, the National Research Council's Committee on Toxicology developed criteria and

methods for EPA and the Agency for Toxic Substances and Disease Registry (ATSDR) to develop community emergency exposure levels for extremely hazardous substances for the general population. A few years later, the National Advisory Committee for Acute Exposure Guideline Levels for Hazardous Substances (NAC)â€composed of members of EPA, DOD, other federal and state agencies, industry, academia, and other organizationsâ€was established to identify, review, and interpret toxicologic and other scientific data to develop acute exposure guidelines (AEGLs) for high-priority, acutely toxic chemicals. Three levelsâ€AEGL-1, AEGL-2, and AEGL-3 are developed for each of five exposure periods (10 min, 30 min, 1 hr, 4 hr, and 8 hr) and are distinguished by varying degrees of severity of toxic effects. This current report reviews the NAC reports for their scientific validity, completeness, and consistency with the NRC guideline reports developed in 1993 and 2001. This report is the fifth volume in the series and covers AEGLs for chlorine dioxide, chlorine trifluoride, cyclohexylamine, ethylenediamine, hydrofluoroether-7100, and tetranitromethane. It concludes that the AEGLs developed by NAC are scientifically valid and consistent with the NRC guideline reports. AEGLs are needed for a wide range of planning, response, and prevention applications. These values provide data critical to evacuation decisions and discussions between community leaders and industries as they seek ways to minimize the health impact should the chemical release occur. Some of the finalized AEGLs have been officially adopted by the Department of the Army, FEMA, and the Department of Transportation as the official levels for use by those agencies.
