Ramos,2018-08-18 This volume contains the proceedings of the 11th International Conference on Structural Analysis of Historical Constructions (SAHC) that was held in Cusco, Peru in 2018. Reflecting on and redesigning the guidelines that orient the planning and management of urban development has become, today, an issue of global scope and priority that demands the committed and determined participation of society. In this book, the reader will be able to review either theoretical-methodology to organize notions on urban resilience, or application cases in a variety of areas and subsystems of a city but, being all of them inevitably and intricately linked through a complex matrix of structures and interactions that determine future, well-being, and resilience of urban socio-ecosystems in the global anthropo-environment.

Arquitectura bioclimática y construcción sostenible F. Javier Neila González,Consuelo Acha Román,2009-11

Arquitectura y cambio climático Miguel Ángel Díaz Camacho,2020-12-04 El actual sector de la construcción es el responsable a nivel global de casi el 40 por ciento de las emisiones contaminantes, el 30 por ciento de los residuos sólidos y el 20 por ciento de la contaminación de las aguas. El presente libro se aproxima, de manera divulgativa, al potencial de la arquitectura como activo ambiental para hacer frente a estos impactos en el marco de los objetivos establecidos por la Unión Europea para el año 2050. Desde un planteamiento interescalares, se abordan el clima y el territorio como aspectos clave en cualquier solución urbana y arquitectónica; la ciudad y su entorno paisajístico como la escala adecuada para la gestión de los impactos del cambio climático; las personas y su actividad como centro alrededor del cual se establecen nuevos patrones culturales y de habitabilidad; y por último, se explica el origen vernáculo de la arquitectura como referente para una arquitectura responsable a nivel cultural, social, económico y ambiental hacia la que debemos transitar colectivamente.

Arquitectura sostenible Beatriz Garzón,2021-05-19 Los edificios deben ser diseñados y construidos de manera que sus fines (los aspectos: ambiental, funcional, sociológico y simbólico) se interrelacionen y se alcancen a través de sus medios (aspectos: tecnológico y morfológico) con el objeto de permitir su habitabilidad, funcionamiento y mantenimiento con el uso eficiente de los recursos naturales y culturales del sitio y con niveles bajos de dependencia (energética, económica, etc.) para minimizar los impactos hacia sus contextos. De este modo, se logrará una Arquitectura Sostenible. Ésta, es la manera de concebir el diseño, gestión y ejecución de un hecho arquitectónico a través del aprovechamiento racional, apropiado y apropiable de los recursos naturales y culturales del lugar de su emplazamiento buscando minimizar sus impactos ambientales sobre los contextos natural y cultural en cuestión. La dimensión de este desafío es grande pero no imposible; para ello, se requiere de la concienciación al respecto, de las capacidades y habilidades pertinentes, de los lineamientos y herramientas adecuados y asequibles.

Arquitectura Sostenible: Entre Medición y Significado Carmela Cucuzzella,Sherif Goubran,2022-06-07 Cada día, nuevos artículos, libros e informes presentan nuevos métodos, estándares y tecnologías para lograr la sostenibilidad en arquitectura. Además, los nuevos materiales, dispositivos tecnológicos y datos se consideran cada vez más los elementos básicos del futuro de la arquitectura. A medida que adoptamos cada vez más este avance tecnológico, debemos ser igualmente conscientes de que podemos estar empujando la arquitectura hacia una ciencia administrativa y alejándonos de sus preocupaciones centrales, como la expresión, la contextualidad, la funcionalidad y la estética. La arquitectura sostenible que se centra en las medidas abstractas de consumo, energía y emisiones pierde de vista el papel vital que tiene la arquitectura en nuestro mundo: es el campo que crea nuestros espacios públicos y nuestros lugares de vivienda, de negocio, de producción, del ocio y la creación. Además, no comprende la dimensión humana de los edificios, como elementos que están profundamente conectados con los contextos históricos de sus lugares, y que juegan un papel clave en la definición de nuestras relaciones sociales y nuestra conexión con los espacios que ocupamos y utilizamos. 'Arquitectura Sostenible: Entre Medición y

Significado' da un paso atrás para reflexionar sobre cómo la sostenibilidad en el entorno construido puede teorizarse y practicarse críticamente. Este libro expone que la arquitectura sigue siendo una ciencia humana y social que se encuentra en la intersección de medidas y significados. Revela que la arquitectura sostenible todavía puede operar en un espacio dialéctico de expresión, en lugar de servir como un manifiesto de los extremos técnicos o socioculturales. Pretende que la intuición, los sentidos y las habilidades humanas todavía tienen la clave para desentrañar futuros alternativos de espacios construidos sostenibles. Y lo más importante es que los humanos todavía tienen un lugar en la arquitectura sostenible. Este libro será de interés para estudiantes, académicos que inician su carrera, investigadores establecidos y profesionales que estudian la sostenibilidad en el entorno construido. Puede usarse como referencia para aquellos en los campos del diseño, arquitectura, paisaje y diseño urbano, estudios urbanos, geografía, ciencias sociales e ingeniería.

Arquitectura bioclimática, 2004 Si se parte de la premisa que la arquitectura es un trabajo social, se debe enfatizar la tendencia bioclimática, pues sus principios van dirigidos: Al mejoramiento de la calidad de vida de los usuarios desde el punto de vista del confort higrotérmico. A la integración del objeto arquitectónico a su contexto. A incidir en la reducción de la demanda de energía convencional y al aprovechamiento de fuentes energéticas alternativas, como resultado del concepto ecológico que enmarca esta tendencia. Por lo tanto, la teoría del diseño debe ser el campo de gestión y producción de objetos arquitectónicos, revalorados y reformulados por los principios del bioclimatismo en procura de edificaciones energéticamente eficientes, con una expresión formal-tecnológica acorde con su contexto. Además, se reúnen ejemplos de viviendas proyectadas y materializadas, a distintos niveles: Privado/Público. Para usuarios de diferentes características. En distintas localizaciones geográficas. En diferentes climas. En distintos tipos de asentamientos. Con diferentes modalidades de producción. De este modo, se exponen modos de pensar, saber y hacer sobre casas bioclimáticas, pretendiéndose que constituyan un cuerpo que sirva de pequeño aporte.
