Barnes, 2007-03-22 Botulinum toxins now play a very significant role in the management of a wide variety of medical conditions; from headaches to hypersalivation, and from spasticity to sweating. Rééducation en neurologie Stephan Rostagno, Clémentine Tourlet, 2022-01-11 LA COLLECTION Les ouvrages de la collection Les indispensables en kinésithérapie et physiothérapie, sous la direction d'Adrien Pallot, font écho à la réforme de 2015 des études de kinésithérapie en France, leur contenu étant réparti par rapport aux Unités d'Enseignement (UE) et Unités d'Intégration (UI) définies dans le nouveau programme. Répondant ainsi aux besoins des étudiants, ils seront également un outil utile à tout professionnel désireux de rester à jour. Chaque ouvrage propose, pour chaque champ de compétences professionnelles du kinésithérapeute, une démarche raisonnée basée sur l'identification des signes et symptômes du patient, puis sur leur intégration réflexive d'après le modèle bio-psycho-social. Cette démarche, largement inspirée de la Classification Internationale du Fonctionnement et du Handicap, répond à l'approche par compétences instaurée par la réforme, et permet au (futur) professionnel d'apporter les meilleures réponses et soins possibles au patient. Les ouvrages de cette collection proposent, dans une maquette en couleur, des contenus solides, de haut niveau reposant sur la démarche evidence based practice, étayés de nombreux encadrés, illustrations et focus sur les notions essentielles / importantes. L'OUVRAGE Adoptant une approche centrée sur le patient, par syndrome et non par pathologie, ce volume aborde à travers 7 grandes parties et 46 chapitres, plusieurs thèmes importants de la formation en kinésithérapie : d'une part la sémiologie, la physiopathologie et la pathologie dans le champ neuromusculaire (UE16) et d'autre part l'évaluation, les techniques et outils d'intervention dans ce même champ (UE 20). Une dernière partie consultable en ligne propose de très nombreuses échelles d'évaluation. Les contenus suivent la Classification Internationale du Fonctionnement.

Spasticity, Second Edition Allison Brashear, 2015-12-09 Since publication of the first edition, *Spasticity: Diagnosis and Management* has been the defining reference and go-to source for physicians, therapists, and other healthcare providers who care for patients with spasticity. For this new updated edition, Dr. Brashear and a diverse team of specialists have come together to integrate new research, clinical trials, measurement tools, therapies, and other recent advances that reflect this evolving field. The book is organized into four sections, each of which covers a broad scope of material. The first is a general overview of spasticity and its effects on movement in patients. Other chapters cover epidemiology and ancillary findings commonly associated with spasticity. Part II details assessment tools and measurements, treatment goals, and how to aim for realistic outcomes. Part III outlines various treatment modalities, including heavily updated chapters on the use of botulinum toxin in the upper and lower extremities, guidance techniques for injections, intrathecal baclofen, neuromodulation, surgery, physical therapy, and more. The last section, which contains several new chapters, discusses evaluation of outcomes and management of patients with stroke, traumatic brain injury, spinal cord injuries, multiple sclerosis, cerebral palsy, and cancer, followed by chapters on spasticity management in long-term care facilities and economic considerations. This book remains the most comprehensive guide to diagnosis and management of spasticity in adults and children, and the revised second edition will continue to serve as an invaluable resource for professionals in any discipline who strive to provide

quality care to spasticity patients. Key Features: Revised edition of the premier clinical reference on spasticity Incorporates the latest advances in assessment and treatment Contains six entirely new chapters highlighting key topics including Tardieu scale and other measurement tools, ultrasound guidance for botulinum toxin management, spasticity in special populations, emerging therapies, and economic impact More than 200 figures and 70 tables accompany the updated text

Science-based Rehabilitation Elizabeth Ellis (MSc.), 2005-01-01 Physiotherapy as a profession has changed radically in the last few years with the rapid development of interventions based on a wider and sounder theoretical basis, the development of reliable measurement tools and vigorous testing of outcomes. Science-based Rehabilitation describes various aspects of rehabilitation by a distinguished group of international contributors who share a passion for scholarship and a vision of translating theory into practice. The authors cover assessment through to the nature and contribution of impairments to disability and finally handicap and reflect the research outcomes of physiotherapists. It is a clear illustration of where we are now and where we have come from.

The Behavioral and Cognitive Neurology of Stroke Olivier Godefroy, Julien Bogousslavsky, 2007-01-18 The care of stroke patients has changed dramatically. As well as improvements in the emergency care of the condition, there have been marked advances in our understanding, management and rehabilitation of residual deficits. It provides a comprehensive review of the field covering the diagnostic value of these conditions, in the acute and later phases, their requirements in terms of treatment and management and the likelihood and significance of long-term disability. This book will appeal to all clinicians involved in the care of stroke patients, as well as to neuropsychologists, other rehabilitation therapists and research scientists investigating the underlying neuroscience.

Neurological Rehabilitation Anand D. Pandyan, Hermie J. Hermens, Bernard A. Conway, 2018-04-19 This book is the first attempt at bringing together a volume of work from a range of professionals with an interest in spasticity. The framework for the definition was developed in part by the authors contributing chapters that make up this volume. The book represents the current state-of-the-art regarding definition, measurement, pathophysiology (all state-of-the-art summaries) and simultaneously gives clinicians guidance on clinical management. This work combines coverage of both spasticity and contractures as these two phenomena are often closely interrelated. Current researchers do not differentiate between these individual impairments and, as such, there is significant confusion in the literature. This book discusses both conditions and then separates them into their respective components. If these two conditions co-exist (which is generally the case), then the management of a patient will need to be customized to individual clinical presentation. The clinical sections of the book are all written by currently practicing, and research active, clinicians, and the earlier chapters are written by researchers currently working on spasticity. In summary, this book: Provides information that is clinically relevant and strongly researched Includes clinical studies covering both spasticity and contractures, which is unique Presents editors and contributors that are world-class experts Takes a cookbook approach to measurements in clinical studies and research Contains extensive references that are included at the end of each chapter

Pediatric Stroke Rehabilitation Heather Atkinson, Kim Nixon-Cave, Sabrina Smith, 2024-06-01 Pediatric Stroke Rehabilitation: An Interprofessional and Collaborative Approach is a groundbreaking text designed to enhance the practice of all health care providers, enrich discussion, and emphasize the interdisciplinary nature of managing best outcomes for a child who has had a stroke. Evidence-based practice is threaded throughout the text with an emphasis on recovery vs. compensation, goal achievement, and outcome measurement. In conjunction with the interdisciplinary contributions from a

wide variety of health care professionals, Drs. Heather Atkinson, Kim Nixon-Cave, and Sabrina E. Smith aim to provide the necessary tools to effectively treat children with stroke. The first section reviews the medical fundamentals, covering all major types of strokes. The second section of Pediatric Stroke Rehabilitation focuses on the core of the matter, rehabilitation. The final section expands the understanding of the child's recovery to the family, community, and school environment. Select chapters include: Personal vignettes written by family members of children who have had a stroke that provides insight into the impact a stroke can have on the child and family A family focus box to summarize the main points of the chapter to provide the best tools for caregivers to advocate for their child A case study related to the content and family perspective Pediatric Stroke Rehabilitation also utilizes the World Health Organization's International Classification of Functioning, Disability, and Health (ICF) framework throughout. Included with the text are online supplemental materials for faculty use in the classroom. Pediatric Stroke Rehabilitation: An Interprofessional and Collaborative Approach is an interdisciplinary and invaluable resource for students and clinicians to understand and apply effective evidence-based practice and treatment approaches for childhood stroke. The text will also be of interest to healthcare professionals, specifically physical therapists, occupational therapists, speech-language pathologists, physicians, neuropsychologists, nurses, and educators, who work with children who have experienced a stroke.

Bone and Joint Disorders of the Foot and Ankle Maurice Bouysset, 2013-04-17 This encyclopedia on the pathology of the foot is to some extent a response to the wishes expressed in 1978 by the organizers of the Premieres Journees Europeennes de Podologie in Paris; in effect, they advocated a close collaboration between the diverse specialities of medicine and orthopedics in the field of the study and treatment of affections of the foot with a view to an ever closer collaboration for the well-being of the patients. An increasing number of patients seek the help of the rheumatologist or orthopedist for disorders of the feet, the clinician is then confronted either with a diagnostic problem when the foot is the organ primarily affected, or a therapeutic problem when a sufferer from a well defined rheumatic disease is led to consult him for persistent pain. Even if the pathology of the feet has often been neglected by the medical profession, whereas the hands have received every attention, many European rheumatologists and orthopedic surgeons have for long addressed this problem. The names of some of the pioneers in this subject during the 1950S and 60S will be familiar: EGL Bywaters and A St Dixon in Great Britain, WS Vainio in Finland, K Tillmann in Germany, AS Denis and S Braun in France. Further, one should not ignore the considerable contribution to our knowledge of podology provided by the Monographies de podologie published by Masson under the supervision of Lucien Simon and his team at Montpellier: some ten volumes in all.
