Clinical Integration of Neuropsychological Test Results Charles J. Golden,Ryan Bennett,2024-09-13 The interpretation of neuropsychological tests is a complex process which requires recognition of the multiple skills required to complete even the simplest tests. The purpose of this volume is to explore the various interpretive strategies used with a wide variety of commonly used tests in order to see beyond the skills suggested by the test title. By integrating these possible interpretations across multiple tests, the neuropsychologist can pinpoint those deficits which lie at the core of a client's pattern of test results. It is intended for both professionals and for students starting to learn the clinical practice of neuropsychology.

Behavioral Neurology & Neuropsychiatry David B. Arciniegas,C. Alan Anderson,Christopher M. Filley,2013-01-24 The merger of behavioral neurology and neuropsychiatry into a single medical subspecialty, Behavioral Neurology & Neuropsychiatry, requires an understanding of brain-behavior relationships and a clinical approach that transcends the traditional perspectives of neurology and psychiatry. Designed as a primer of concepts and principles, and authored by a multidisciplinary group of internationally known clinical neuroscientists, this book divides into three sections: • Structural and Functional Neuroanatomy (Section I) addresses the neuroanatomy and phenomenology of cognition, emotion, and behavior • Clinical Assessment (Section II) describes neuropsychiatric history taking, neurological and mental status examinations, neuropsychological assessment, and neuroimaging, electrophysiologic, and laboratory methods • Treatment (Section III) discusses environmental, behavioral, rehabilitative, psychological, social, pharmacological, and procedural interventions for cognitive, emotional, and behavioral disorders. By emphasizing the principles of Behavioral Neurology & Neuropsychiatry, this book will improve your understanding of brain-behavior relationships and inform your care of patients and families affected by neurobehavioral disorders.

A Casebook of Mental Capacity in US Legislation Lynn A. Schaefer,Thomas J. Farrer,2022-06-30 A Casebook of Mental Capacity in US Legislation: Assessment and Legal Commentary employs an applied and accessible approach to the assessment of mental capacity. Through the use of rich vignettes and case examples, the text provides legal commentary to illustrate state laws and ethical principles from varied decision-making capacities in distinct settings to fortify its assessment. The text begins by providing a background about decision-making capacity as a construct. It also provides practical guidance on capacity assessment germane to a broad range of clinical settings, including geropsychology, health psychology, and neuropsychology. It moves on to reviewing decision-making rights that make up capacity, and provides ethical guidelines while drawing the practitioner's attention to the common pitfalls. The case presentations and legal commentary underline key areas such as the capacity to consent to medical treatment, make welfare decisions, enter into a sexual relationship, make financial decisions, create or revoke a will, litigate and contract, and stand trial. It also includes a chapter focusing on integrating culture and diversity in capacity evaluations with the aim of increasing the practitioner's competence. This casebook will be useful for clinical psychologists in practice, researchers and students seeking to understand how to perform capacity assessments, as well as other related healthcare professionals. It is further aimed at legal professionals to utilize as a reference that details how individual types of capacity are defined and assessed.

The Metaphorical Brain Seana Coulson, Vicky T. Lai, 2016-03-09 Metaphor has been an issue of intense research and debate for decades (see, for example [1]). Researchers in various disciplines, including linguistics, psychology, computer science, education, and philosophy have developed a variety of theories, and much progress has been made [2]. For one, metaphor is no longer considered a rhetorical flourish that is found mainly in literary texts. Rather, linguists have shown that metaphor is a pervasive phenomenon in everyday language, a major force in the development of new word meanings, and the source of at least some grammatical function words [3]. Indeed, one of the most influential theories of metaphor involves the suggestion that the commonality of metaphoric language results because cross-domain mappings are a major determinant in the organization of semantic memory, as cognitive and neural resources for dealing with concrete domains are recruited for the conceptualization of more abstract ones [4]. Researchers in cognitive neuroscience have explored whether particular kinds of brain damage are associated with metaphor production and comprehension deficits, and whether similar brain regions are recruited when healthy adults understand the literal and metaphorical meanings of the same words (see [5] for a review) . Whereas early research on this topic focused on the issue of the role of hemispheric asymmetry in the

comprehension and production of metaphors [6], in recent years cognitive neuroscientists have argued that metaphor is not a monolithic category, and that metaphor processing varies as a function of numerous factors, including the novelty or conventionality of a particular metaphoric expression, its part of speech, and the extent of contextual support for the metaphoric meaning (see, e.g., [7], [8], [9]). Moreover, recent developments in cognitive neuroscience point to a sensorimotor basis for many concrete concepts, and raise the issue of whether these mechanisms are ever recruited to process more abstract domains [10]. This Frontiers Research Topic brings together contributions from researchers in cognitive neuroscience whose work involves the study of metaphor in language and thought in order to promote the development of the neuroscientific investigation of metaphor. Adopting an interdisciplinary perspective, it synthesizes current findings on the cognitive neuroscience of metaphor, provides a forum for voicing novel perspectives, and promotes avenues for new research on the metaphorical brain. Diagnosis of Dementia and Cognitive Impairment Andrew J. Larner, 2019-12-10 In this special issue of *Diagnostics*, expert contributors have produced up-to-date research studies and reviews on various topics related to the diagnosis of dementia and cognitive impairment. The methods of the assessments discussed extend from simple neurological signs, which may be elicited in the clinical encounter, through cognitive screening instruments, to sophisticated analyses of neuroimaging and cerebrospinal fluid biomarkers of disease. It is hoped that these various methods may facilitate earlier diagnosis of dementia and its subtypes, and provide differential diagnosis of depression and functional cognitive disorders, as a prelude to meaningful interventions.

Exploring Evidence for Neurorehabilitation Advancements Hideki Nakano, Masahiro Sakita, Kosuke Oku, Tomotaka

Ito,Akiyoshi Matsugi,2025-08-12 Neuroscience-based rehabilitation is called neurorehabilitation. Specifically, neurorehabilitation is defined as concepts, evaluation methods, treatments, and equipment that apply brain theories and other findings revealed by neuroscience and related research to rehabilitation. Physical dysfunction, including central nervous system disease, alters the body's representation in the brain, resulting in stagnation of motor function recovery. Therefore, neuroscience-based rehabilitation is essential to reconstruct the altered body representation in the brain. However, the evidence for neurorehabilitation is still insufficient, and it is critical to build upon this evidence to provide optimal rehabilitation and maximize motor function recovery. Many fundamental studies on neuroplasticity, motor control and motor learning theory, brain function measurement, non-invasive brain stimulation, and advanced technologies such as brain-machine interface, AI, and regenerative medicine have been reported in recent years. The integration of neuroscience and cutting-edge research related to neuroscience has excellent potential to contribute to the development of neurorehabilitation.

Handbook of Computational Neurodegeneration Panagiotis Vlamos,Ilias S. Kotsireas,Ioannis Tarnanas,2023-07-25 The Handbook of Computational Neurodegeneration provides a comprehensive overview of the field and thus bridges the gap between standard textbooks of research on neurodegeneration and dispersed publications for specialists that have a narrowed focus on computational methods to study this complicated process. The handbook reviews the central issues and methodological approaches related to the field for which the reader pursues a thorough overview. It also conveys more advanced knowledge, thus serving both as an introductory text and as a starting point for an in-depth study of a specific area, as well as a quick reference source for the expert by reflecting the state of the art and future prospects. The book includes topics that are usually missing in standard textbooks and that are only marginally represented in the specific literature. The broad scope of this handbook is reflected by five major parts that facilitate an integration of computational concepts, methods and applications in the study of neurodegeneration. Each part is intended to stand on its own, giving an overview of the topic and the most important problems and approaches, which are supported by examples, practical applications, and proposed methodologies. The basic concepts and knowledge, standard procedures and methods are presented, as well as recent advances and new perspectives.

Methodology in Neuropsychological Assessment Sara Mondini,Marinella Cappelletti,Giorgio Arcara,2022-11-04 Methodology in Neuropsychological Assessment: An Interpretative Approach to Guide Clinical Practice provides practical and methodological guidance for neuropsychologists working with people with brain lesions or brain dysfunctions. The textbook underlines the principles that can be used to guide clinicians in recognizing and interpreting signs and symptoms while enabling a complete neuropsychological assessment through a series of well-defined steps. The text provides a detailed methodological approach towards neuropsychological tools, with guidance on how to select the right test and how to

interpret the outcome, which can act as a primer for a clinician through every step of the assessment in a coherent and reasoned way. The textbook presents an exhaustive discussion of the varied tools that a clinician can employ to complete a rigorous and consistent neuropsychological assessment. It guides the reader from the first step of collecting the personal history of the examinee – the anamnesis – to the selection of suitable psychometric tests and scoring, which is accordingly integrated to formulate the neuropsychological diagnosis and write up the neuropsychological report. Chapters also include coverage of the neuropsychological interview with the examinee and their family and the probability of identifying a disorder with a neuropsychological assessment. The authors have further included a series of detailed and explanatory clinical cases from their experience to expand upon the evaluation process. The textbook is valuable reading for students in clinical neuropsychology who are learning to carry out neuropsychological evaluations as well as clinicians who are seeking to develop a more comprehensive approach towards performing a thorough neuropsychological assessment.

A Handbook of Geriatric Neuropsychology Shane S. Bush, Brian P. Yochim, 2022-07-12 A Handbook of Geriatric Neuropsychology: Practice Essentials (Second Edition) brings together experts in the field to integrate the knowledge and skills needed to understand and treat older adults who are experiencing problems with memory and other thinking skills. With three new sections, including coverage of other conditions beyond neuropsychological disorders, special assessment contexts, and more on interventions and ethics, as well as multiple new chapters, and significant updates from the first edition, this book provides a strong foundation for clinicians, educators, and researchers invested in the wellbeing of older adults. The impact and experience of aging, like the practice of neuropsychology, evolves over time. Similarly, through advances in science and professional techniques, neuropsychological practice has continued to evolve. Neuropsychological evaluation remains the most effective method of diagnosing age-related cognitive decline, cognitive difficulties that result from psychological factors, and other related disorders, as well as determining how the various disorders impact functioning and quality of life. This book explores these areas and offers state-of-the-art assessment techniques to assess changes in cognition and behavior and to distinguish normal changes from neuropathology. This book is a go-to resource and key reference for psychologists who serve older adults with known or suspected cognitive problems, as well as those who are invested in promoting brain wellness. It provides much of the information needed to establish and improve foundational and functional competencies in geriatric neuropsychology and establish practices that are personally and professionally rewarding, all aimed at promoting the understanding and wellbeing of older adults.

Cognitive Impairment and Depression in Older Patients Martin Steinberg, Paul B. Rosenberg, 2017 This book will guide clinicians through the assessment and management of depression, mild cognitive impairment (MCI), and early dementia. Its focus on office-based management, emphasis on practical interventions, use of case studies to illustrate teaching points, and non-academic language are particular strengths.

Psychosocial Advances in Neuro-Oncology Tamara Ownsworth, Suzanne Chambers, Haryana Dhillon, 2016-02-12 Neuro-oncology is a rapidly growing field concerned with scientific developments and clinical applications related to neuroscience, neuropsychology, cancer and oncology. Neuro-oncological disorders include cancers that directly affect the central nervous system (CNS), such as brain tumours and brain metastases, and non-CNS cancers with treatments that produce neurocognitive impairment. To date, the biological mechanisms and neuropsychological effects of brain tumour and cancer have been the dominant focus in neuro-oncology literature. In terms of psychosocial aspects of care, people's understanding of their diagnosis and symptoms and how they cope with their illness has a major influence on their emotional well-being and quality of life. The development and evaluation of psychological and supportive care interventions for people with brain tumour is an area of emerging research and of high interest to health professionals working in the field. This Research Topic aims to enhance understanding of the psychological and social consequences of brain tumour and other cancers impacting neurocognitive function. It also aims to showcase new developments in assessment and psychosocial intervention approaches.

A Guide to Alzheimer's Prevention and Brain Function Enhancement Pengxu Wei, 2025-06-08 This book aims to unlock new insights into Alzheimer's disease and brain health. Interventions for preventing Alzheimer's disease focus on nutrition, exercise, and cognitive activities, while also emphasizing the importance of rest and relaxation, individualization, and the need for continuous monitoring, particularly of cognitive function. Cognitive function monitoring needs to be initiated from the pre-MCI stage. This monitoring entails not only examining changes in subjective cognitive function, but also assessing performance-based cognitive function. The book will also provide interventions inspired by the results of functional neuroimaging research. The book will advance the understanding of Alzheimer's disease and of enhancing brain health.. Researchers and professionals in neurology, neuroscience, neurodegenerative diseases, neurorehabilitation, and the diagnosis and treatment of cognitive function will find this book to be a valuable resource.
