Landlords, Peasants and Politics in Medieval England T. H. Aston,Trevor Henry Aston,2006-11-02 The articles in this book, reprinted from the journal Past and Present, are all, in different ways, concerned with the ownership of landed property in medieval England and with those who worked the land. Problems debated include those concerning the keeping intact of the great estates of the Anglo-Norman barons in the face of both inheritance claims and of political manipulation by the crown. Other articles show that the difficulties of knights and lesser gentry were no less complex, as social shifts resulted from economic developments as well as from their military role and their relationships with their overlords. The essays are of as much importance for those interested in the history of politics as to those concerned with the economy and society of medieval England.

Transport and Communication in Early Medieval Europe AD 500-1100 Albert C. Leighton,1972

Waterways and Canal-Building in Medieval England John Blair,2007-10-25 A study of Anglo-Saxon and Anglo-Norman canals and waterways, this book is based on evidence surrounding the nature of water transport in the period. A collection of essays, this study unearths this neglected but important aspect of medieval engineering and economic growth.

Routledge Revivals: Trade, Travel and Exploration in the Middle Ages (2000) John Block Friedman,Kristen Mossler Figg,2017-07-05 First published in 2000, Trade, Travel, and Exploration: An Encyclopedia covers the people, places, technologies, and intellectual concepts that contributed to trade, travel and exploration during the Middle Ages, from the years C.E. 525 to 1492. This comprehensive reference work contains entries on a large number of subjects, including familiar topics such as the voyages of Columbus and Marco Polo, and also information that is more difficult to find, for example, the traditions of travel among Muslim women and the influence of Viking travel on navigation and geographical knowledge. Bringing together more than 175 scholars from a variety of disciplines, it minimizes Eurocentric bias and offers extensive coverage of such topics as travel within Inner Asia, Mongol society, and the spread of Buddhism. Including an extensive map program and more than 125 illustrations, as well as bibliographies, a comprehensive index and see also references, Medieval

Trade, Travel, and Exploration is a valuable reference guide for undergraduate and graduate students, scholars and also the general reader.

Modelling the Middle Ages John Hatcher, Mark Bailey, 2001-05-03 Most of what has been written on the economy of the middle ages is deeply influenced by abstract concepts and theories. The most powerful and popular of these guiding beliefs are derived from intellectual foundations laid down in the eighteenth and nineteenth centuries by Adam Smith, Johan von Thünen, Thomas Malthus, David Ricardo, and Karl Marx. In the hands of twentieth-century historians and social scientists these venerable ideas have been moulded into three grand explanatory ideas which continue to dominate interpretations of economic development. These trumpet in turn the claims of 'commercialization', 'population and resources', or 'class power and property relations' as the prime movers of historical change. In this highly original book John Hatcher and Mark Bailey examine the structure and test the validity of these conflicting models from a variety of perspectives. In the course of their investigations they provide not only detailed reconstructions of the economic history of England in the middle ages and sustained critical commentaries on the work of leading historians, but also discussions of the philosophy and methods of history and the social sciences. The result is a short and readily intelligible introduction to medieval economic history, an up-to-date critique of established models, and a succinct treatise on historiographical method.

The Geography of Transport Systems Jean-Paul Rodrigue, 2016-12-19 This expanded and revised fourth edition of The Geography of Transport Systems provides a comprehensive and accessible introduction to the field with a broad overview of its concepts, methods and areas of application. Aimed mainly at an undergraduate audience, it provides an overview of the spatial aspects of transportation and focuses on how the mobility of passengers and freight is linked with geography. The book is divided in ten chapters, each covering a specific conceptual dimension, including networks, modes, terminals, freight transportation, urban transportation and environmental impacts, and updated with the latest information available. The fourth edition offers new material on the issues of transport and the economy, city logistics, supply chains, security, energy, the environment, as well as a revised content structure. With over 160 updated photographs, figures and maps, The Geography of Transport Systems presents transportation systems at different scales ranging from global to local and focuses on different contexts such as North America, Europe and East Asia. This volume is an essential resource for undergraduates studying transport geography, as well as those interested in economic and urban geography, transport planning and engineering. A companion web site, which contains additional material, has been developed for the book and can be found here: <http://people.hofstra.edu/geotrans/>

Shipping the Medieval Military Craig L. Lambert, 2011 Mariners made a major - but neglected - contribution to England's warfare in the middle ages. Here their role is examined anew, showing their importance. During the fourteenth century England was scarred by famine, plague and warfare. Through such disasters, however, emerged great feats of human endurance. Not only did the English population recover from starvation and disease but thousands of the kingdom's subjects went on to defeat the Scots and the French in several notable battles. Victories such as Halidon Hill, Neville's Cross, Crécy and Poitiers not only helped to recover the pride of the English chivalrous class but also secured the reputation of Edward III and the Black Prince. Yet what has been underemphasized in this historical narrative is the role played by men of more humble origins, none more so than the medieval mariner. This is unfortunate because during the fourteenth century the manpower and ships provided by the English merchant fleet underpinned every military expedition. The aim of this book is to address this gap. Its fresh approach to the sources allows the enormous contribution of the English merchant fleet to the wars conducted by Edward II and Edward III to be revealed; the author also explores the complex administrative process of raising a fleet and provides career profiles for many mariners, examining the familial relationships that existed in port communities and the shipping resources of English ports. Craig L. Lambert is Research Assistant at the University of Hull.

International Encyclopedia of Transportation, 2021-05-13 In an increasingly globalised world, despite reductions in costs and time, transportation has become even more important as a facilitator of economic and human interaction; this is reflected in technical advances in transportation systems, increasing interest in how transportation interacts with society and the need to provide novel approaches to understanding its impacts. This has become particularly acute with the impact that Covid-19 has had on transportation across the world, at local, national and international levels. *Encyclopedia of Transportation, Seven Volume Set* - containing almost 600 articles - brings a cross-cutting and integrated approach to all aspects of transportation from a variety of interdisciplinary fields including engineering, operations research, economics, geography and sociology in order to understand the changes taking place. Emphasising the interaction between these different aspects of research, it offers new solutions to modern-day problems related to transportation. Each of its nine sections is based around familiar themes, but brings together the views of experts from different disciplinary perspectives. Each section is edited by a subject expert who has commissioned articles from a range of authors representing different disciplines, different parts of the world and different social perspectives. The nine sections are structured around the following themes: Transport Modes; Freight Transport and Logistics; Transport Safety and Security; Transport Economics; Traffic Management; Transport Modelling and Data Management; Transport Policy and Planning; Transport Psychology; Sustainability and Health Issues in Transportation. Some articles provide a technical introduction to a topic whilst others provide a bridge between topics or a more future-oriented view of new research areas or challenges. The end result is a reference work that offers researchers and practitioners new approaches, new ways of thinking and novel solutions to problems. All-encompassing and expertly authored, this outstanding reference work will be essential reading for all students and researchers interested in transportation and its global impact in what is a very uncertain world. Provides a forward looking and integrated approach to transportation Updated with future technological impacts, such as self-driving vehicles, cyber-physical systems and big data analytics Includes comprehensive coverage Presents a worldwide approach, including sets of comparative studies and applications

Nonlinear Economic Dynamics Tönu Puu, 2012-12-06 The present study deals with nonlinear economic dynamics, with which the author has been concerned the last years. It grew out from the joint work by Professor Martin Beckmann and the present author on nonlinear statics in spatial economics, Beckmann and Pull, *Spatial Economics* (North-Holland 1985), later followed by its companion, Beckmann and Puu *Spatial Structures* (Springer-Verlag 1990). The first monograph mentioned contains sections on price waves and business cycles, but in a linear format. The rest is static theory. The author has finally come to the conviction that linear dynamic modelling has very little to yield. This is due to the poor set of alternatives -decay or explosion of motion -pertinent to linear models. Therefore, the present work centres on non-linearity. Another distinction is that only purely causal models are dealt with, as those formatted as inter-temporal equilibria hardly belong to the more restricted field of dynamics. The spatial origin is visible in the choice of models. Chapters 1 and 2 summarize the work by the author on the structural stability of continuous spatial market equilibrium models. Chapter 3 deals with a re-formulation of the ingenious population growth and diffusion model invented by the young Hotelling in 1921. Chapter 4 is a detailed digression on business cycle models in a continuous spatial format with inter-regional trade.

Centrality in Strategic Transportation Network Design Anne Lange, 2019-03-01 Efficient and effective transportation networks are backbones to modern societies. Methodologically, their design has mainly been driven by optimization approaches oftentimes with a strong cost focus. Their strategic planning, however, should go beyond detailed cost analysis and identify other key decision drivers. Transportation network centrality describes the appearance of a network; hence is crucial for network design. Anne Paul develops a strategic approach to transportation network design by conceptualizing transportation network centrality and relating it to the performance and quality of transportation networks. Consequently, the concept of network centrality serves to support decisions in strategic network design. A practical implementation of this approach is provided, demonstrating its feasibility. Potential readers include scholars and practitioners from logistics, supply chain management, and operational research with an interest in strategic transportation network design.

Groundbreaking Scientific Experiments, Inventions, and Discoveries of the Middle Ages and the Renaissance

Robert E. Krebs, 2004-03-30 The Middle Ages and the Renaissance were a period of scientific and literary reawakening. Scientific development and a renewed interest in classical science led to new discoveries, inventions, and technologies. Between 500 and 1600 A.D., scientific explorers rediscovered ancient Greek and Eastern knowledge, which led to an eruption of fresh ideas. This reference work describes more than 75 experiments, inventions, and discoveries of the period, as well as the scientists, physicians, and scholars responsible for them. Individuals such as Leonardo da Vinci, Marco Polo,

and Galileo are included, along with entries on reconstructive surgery, Stonehenge, eyeglasses, the microscope, and the discovery of smallpox. Part of a unique series that ranges from ancient times to the 20th century, this exploration of scientific advancements during the Middle Ages and the Renaissance will be useful to high school and college students, teachers, and general readers seeking information about significant advances in scientific history.

Civil Engineering - Volume I Kiyoshi Horikawa, Qizhong Guo, 2009 Civil Engineering is the component of Encyclopedia of Physical Sciences, Engineering and Technology Resources in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. Civil Engineering is the oldest of the engineering specialties and has contributed very much to develop our society throughout the long history of human life. The advancement of civil engineering has, therefore, been closely related to that of civilization. In this theme, human activities on the earth from ancient times to the present are briefly reviewed first, and then the history of the process to establish the civil engineering discipline is discussed for better understanding of the important role that civil engineering has played in the growth of a mature society, from both technological and social points of view. Broad diversification of civil engineering has resulted from the enormous expansion of society during the latter half of the twentieth century. The various branches are briefly described to show the notable characters that civil engineering has formed to maintain the sustainable development of society. The Theme on Civil Engineering with contributions from distinguished experts in the field provides the essential aspects and fundamentals of civil engineering. The two volumes are aimed at the following five major target audiences: University and College Students Educators, Professional Practitioners, Research Personnel and Policy Analysts, Managers, and Decision Makers, NGOs and GOs.
