Using Modeling to Predict and Prevent Victimization Ken Pease,Andromachi Tseloni,2014-01-09 This work provides clear application of a new statistical modeling technique that can be used to recognize patterns in victimization and prevent repeat victimization. The history of crime prevention techniques range from offender-based, to environment/situation-based, to victim-based. The authors of this work have found more accurate ways to predict and prevent victimization using a statistical modeling, based around crime concentration and sub-group profiling with regard to crime vulnerability levels, to predict areas and individuals vulnerable to crime. Following from this prediction, they propose policing strategies to improve crime prevention based on these predictions. With a combination of immediate actions and longer-term research recommendations, this work will be of interest to researchers and policy makers in focused on crime prevention, police studies, victimology and statistical applications.

Neighbourhoods of Poverty S. Musterd,A. Murie,C. Kesteloot,2006-01-27 Neighbourhoods of Poverty is concerned with the spatial dimension of urban social exclusion and integration. It draws on research from twenty-two neighbourhoods in eleven European cities: Amsterdam, Rotterdam, Brussels, Antwerp, London, Birmingham, Berlin, Hamburg, Milan, Naples and Paris and addresses two questions: - How do different neighbourhoods have an impact upon the opportunities and perspectives of poor individuals and households? - Are these neighbourhood impacts conditioned by national and welfare state contexts, by the wider metropolitan structures and by specific neighbourhood characteristics? Various aspects of poverty, social exclusion and integration are brought together and provide a new assessment of the place of neighbourhood within these wider debates.

Addressing Health Inequalities through Community Media Fazal Malik,2023-10-18 This book explores the efforts of marginalized communities to address the health inequalities that characterize life in many deprived areas of post-

industrialized cities in the UK. Spread over six chapters, the book maps the role of small-scale and community-based media in contextualizing a link between people's experiences and expression to validate marginalized points of view. It takes an ethnographic approach and demonstrates that a multi-agency and faith-based community broadcasting initiative can be an empowering platform for communicative interaction.

Crime Control and Community Gordon Hughes, Adam Edwards, 2013-01-10 The aim of this book is to bring together findings from case studies of community-based crime control in England as a means of examining the prospects for this approach, its evolving relationship with criminal justice and social policies, to assess the lessons internationally that can be drawn from this in the theory, research methods, politics and practice of crime control, and to present an important new conceptual framework for understanding community-based crime control.

Dying for Victorian Medicine E. Hurren, 2011-12-12 The first book to provide a detailed analysis of the body-trafficking networks of the dead poor that underpinned the expansion of medical education from Victorian times. With an even-handed approach to the business of anatomy, Hurren uses remarkable case histories which still echo a vibrant body-business on the internet today in a biomedical age.

Ecological Urbanism: The Nature of the City Susannah Hagan, 2014-09-15 Ecological Urbanism: The Nature of the City asks the questions that are important inside and outside the built environment professions: what are climate change, urbanisation and ecology doing to the theory and practice of urban design? How does Ecological Urbanism figure in this change? What is Ecological Urbanism? In answer, this book is neither definitive – impossible when a subject is still in motion – nor encyclopaedic – equally impossible when so much has been written on almost every aspect of these essays. Instead, it seeks to rebalance the ecological narrative and its embryonic modes of practice with the narratives of urbanism and its older, deeply embedded modes of practice. It examines the implications for cities and the designers of cities now we are required to again address their metabolic as well as social and formal dimensions, and it explores the extent to which environmental engineering and natural systems design can and should become drivers for the remaking of cities in the 21st century. Above all, it argues that sooner rather than later, urbanism needs to become environmentally literate, and environmental design needs to become culturally literate.

Popular and Visual Culture Ricardo Campos, Rúben Pinho, Clara Sarmiento, 2014-10-02 Popular and Visual Culture: Design, Circulation and Consumption is a transnational project that fosters a dialogue with multiple origins, both in geographical and academic terms. From the onset, this book questions the concepts of visual and popular culture, terms which are currently applied both to describe scientific fields, as operative concepts in theoretical discourse, and to characterize specific cultural contexts. The book's analysis and categorization of visual and popular culture pursues discourses and practices which mark different historical eras and shape social orders. Because popular iconic and written productions are the outcome of a

network of political, economic, ideological and social circumstances that are often hardly detectable and too taken for granted to be critically recognized, even by those who draw, paint or write (and live) under their influence. That is why visual figurations of popular culture should be studied as the support of a deeply motivated symbolic discourse on the values shared by a community. This book deals, in a way or another, with how popular and visual artefacts and sceneries are socially built, preserved and/or contested. The volume brings together, not only different disciplinary perspectives, but also diverse empirical phenomena, while approaching the wide subject of visuality and popular culture.

Social Policy: An Introduction Ken Blakemore, Louise Warwick-Booth, 2013-10-16 What are social policies? How are social policies created and implemented? Why do certain policies exist? The fourth edition of this highly respected textbook provides a clear and engaging introduction to social policy. The book has been thoroughly updated to include: Changes in social policy introduced by the Coalition government Incorporation of an international perspective throughout, as well as a new chapter: The global social policy environment Updated pedagogy to stimulate thought and learning Comprehensive glossary Social Policy is essential reading for students beginning or building on their study of social policy or welfare. The wide-ranging coverage of topics means that the book holds broad appeal for a number of subject areas including health, social policy, criminology, education, social work and sociology. This textbook has always been a useful teaching resource because it combines substantial and engaging analysis with 'stand alone' extracts. The new edition adds a chapter on global social policy, updates on the Coalition Government and guides to what is in the book. The added activities are well thought out and can be adapted or expanded to suit the needs of particular students. Hedley Bashforth, Teaching Fellow in Social Policy, University of Bath, UK Social Policy: An Introduction, now in its fourth edition and eleventh year, will remain a core social policy text on reading lists across the country due to its well written and comprehensive nature. Completely revised, it has been updated and extended to reflect contemporary developments in social policy and contains updated pedagogical features, including activities for the reader, learning outcomes at the start of each chapter and detailed case studies throughout. Dr Liam Foster, University of Sheffield, UK This book provides, as it states, an introduction to the field and does so by adopting a highly attractive pedagogic style that evidences, at every turn, a sensitivity to the approaches to learning of contemporary students. What Blakemore and Warwick-Booth have produced is a clearly laid out and well-structured analysis of impressive breadth that is a readily accessible learning instrument both for student and teacher. Importantly, it provides numerous opportunities to experiment with new ways of approaching the teaching of the subject. Steen Mangen, Department of Social Policy, London School of Economics and Political Science, UK

Urban and Regional Planning Peter Hall, 2005-08-19 This is the fourth edition of the classic text for students of urban and regional planning. It gives a historical overview of the developments and changes in the theory and practice of planning, throughout the entire twentieth century. This extensively revised edition follows the successful format of previous editions.

Specific reference is made to the most important British developments in recent times, including the devolution of Scotland, Wales and Northern Ireland, the establishment of the Mayor of London and the dominant urban sustainability paradigm. Planning in Western Europe, since 1945, now incorporates new material on EU-wide issues as well as updated country specific sections. Planning in the United States since 1945, now discusses the continuing trends of urban dispersal and social polarisation, as well as initiatives in land use planning and transportation policies. The book looks at the nature of the planning process at the end of the twentieth century and looks forward to the twenty-first century.

Adult Learners, Adult Education And The Community Stephen Brookfield, 1984-06-01 Adults are continually learning outside of conventional education frameworks, acquiring new skills and knowledge in a range of community settings, Stephen Brookfield explores the extent and quality of this informal independent learning and the ways in which adult educators can work with independent adult learners to support and enhance their learning.

Ageing in urban neighbourhoods Allison E. Smith, 2009-09-02 Many western nations have experienced a rise in the number of marginalised and deprived inner-city neighbourhoods. Despite a plethora of research focused on these areas, there remain few studies that have sought to capture the 'optimality' of ageing in place in such places. In particular, little is known about why some older people desire to age in place despite multiple risks in their neighbourhood and why others reject ageing in place. Given the growth in both the ageing of the population and policy interest in the cohesion and sustainability of neighbourhoods there is an urgent need to better understand the experience of ageing in marginalised locations. This book aims to address the shortfall in knowledge regarding older people's attachment to deprived neighbourhoods and in so doing progress what critics have referred to as the languishing state of environmental gerontology. The author examines new cross-national research with older people in deprived urban neighbourhoods and suggests a rethinking and refocusing of the older person's relationship with place. Impact on policy and future research are also discussed. This book will be relevant to academics, students, architects, city planners and policy makers with an interest in environmental gerontology, social exclusion, urban sustainability and design of the built environment.

Understanding Offending Behaviour John Stewart, 2017-09-29 Based on a survey of probation work with almost 1400 young adult offenders, this book provides a unique insight into the realities of probation practice in a context of increasing poverty, drug use and community breakdown. Starting with an outline of the current policy environment, the book discusses the relevance of criminological theory to the harsh experience of young offenders in modern Britain. It goes on to develop a typology of offending behaviour on the basis of detailed and often disturbing accounts of the histories and troubles of young people afflicted by poverty, disruption of family relationships and long term unemployment. While much of the book is

concerned with the difficulties young offenders experience, and the problems probation officers have in trying to help them change, the overall message of the book is not one of despair. The authors show that good probation practice can make a difference, and the book is written in a way which will be useful to practitioners and policy-makers involved with supervising offenders in the community. From the typology of offending the authors extract lessons for appropriate and relevant practice which should help to improve the quality and effectiveness of the probation service. Some of these implications are explored in the concluding chapter, by Cedric Fullwood, Chief Probation Officer of Greater Manchester. As well as criminal justice practitioners, students of criminology, probation trainees and other social work students will find in the book many vivid examples of how sociological theory can be used to understand and interpret practice. The book is likely to provoke much debate about what constitutes positive practice in a probation service facing the challenges of the future.

Understanding Deviance David M. Downes, Paul Elliott Rock, 2011 'Understanding Deviance' provides an indispensable guide to the major themes and theories which have come to form the sociology of crime and deviance, from their origins in the research of the University of Chicago sociology department in the 1920s to the most recent work in cultural criminology.

The Atlas of Health Inequalities in Japan Tomoki Nakaya, Yuri Ito, 2019-10-04 This new health atlas of Japan presents a series of maps about the health of the contemporary Japanese population, i.e. detailed maps of health indicators in small areas using cartograms. This is the first comprehensive small-area based health atlas about contemporary Japan using vital statistics from 1995-2014. Each map is supplemented with concise explanations written by leading epidemiologists and health geographers in Japan. The book employs various cutting-edge methods in spatial epidemiology, Bayesian spatial smoothing for the reliable mapping of mortality indices, advanced cartographic transformations using the concept of aerial cartograms, and summary statistics of socioeconomic health inequalities. The atlas highlights geographical aspects of social gradients in health by comparing mortality maps with distribution of deprivation index during the recent long-lasting economic stagnation period of Japan known as the lost decades. This health atlas will be a useful resource for international comparisons between Japan and other advanced countries in terms of health and related socioeconomic disparities between regions. It will be of interest to public health practitioners, administrators, researchers and students working on health geography and public health.
