The Number Sense Stanislas Dehaene, 2011-04-29 Our understanding of how the human brain performs mathematical calculations is far from complete. In The Number Sense, Stanislas Dehaene offers readers an enlightening exploration of the mathematical mind. Using research showing that human infants have a rudimentary number sense, Dehaene suggests that this sense is as basic as our perception of color, and that it is wired into the brain. But how then did we leap from this basic number ability to trigonometry, calculus, and beyond? Dehaene shows that it was the invention of symbolic systems of numerals that started us on the climb to higher mathematics. Tracing the history of numbers, we learn that in early times, people indicated numbers by pointing to part of their bodies, and how Roman numerals were replaced by modern numbers. On the way, we also discover many fascinating facts: for example, because Chinese names for numbers are short, Chinese people can remember up to nine or ten digits at a time, while English-speaking people can only remember seven. A fascinating look at the crossroads where numbers and neurons intersect, The Number Sense offers an intriguing tour of how

the structure of the brain shapes our mathematical abilities, and how math can open up a window on the human mind-- Provided by publisher.

The Iberian Qur'an Mercedes García-Arenal,Gerard Wiegers,2022-09-20 Due to the long presence of Muslims in Islamic territories (Al-Andalus and Granada) and of Muslims minorities in the Christians parts, the Iberian Peninsula provides a fertile soil for the study of the Qur'an and Qur'an translations made by both Muslims and Christians. From the mid-twelfth century to at least the end of the seventeenth, the efforts undertaken by Christian scholars and churchmen, by converts, by Muslims (both Mudejars and Moriscos) to transmit, interpret and translate the Holy Book are of the utmost importance for the understanding of Islam in Europe. This book reflects on a context where Arabic books and Arabic speakers who were

familiar with the Qur'an and its exegesis coexisted with Christian scholars. The latter not only intended to convert Muslims, and polemize with them but also to acquire solid knowledge about them and about Islam. Qur'ans were seized during battle, bought, copied, translated, transmitted, recited, and studied. The different features and uses of the Qur'an on Iberian soil, its circulation as well as the lives and works of those who wrote about it and the responses of their audiences, are the object of this book.
