Recent research and clinical recommendations, as well as related references, are also provided in each chapter. This Fourth Edition utilizes the American Physical Therapy Association's Guide to Physical Therapist Practice 3.0 and the World Health Organization's International Classification of Functioning, Disability, and Health--Children and Youth as its framework. The focus of the chapters is on children's participation and empowerment, rather than body function and structure. **Accessing the General Physical Education Curriculum for Students with Sensory Deficits** Roseanna Davidson, Effie Laman, Michael F. Shaughnessy, 2006 Students in a regular physical education program typically learn skills through observation and practice. Teachers and specialists working with students who are sensory impaired with multiple disabilities face unique challenges. Because such students make up a small percentage of the population, physical education texts on adaptation, instructional strategies and activities for groups give only minimal information about working with them. This new book explores the issues of the physical education curricula for sensory handicapped children. Typically, these curricula are based on old techniques that have been used since time immemorial. Rather than examine how teachers utilise obsolete curricula, this important book examines how they effect the students.

Clinical decisions made throughout the evaluation process ultimately shape what and how occupational therapy practitioners deliver interventions, perhaps making the evaluation process the most important and interesting part of the service delivery process. It is the context where we first come to know and appreciate our clients, their specific situations, and discover what it is that we, as occupational therapy practitioners can do to be of most help--Provided by publisher.
