The Economics of Natural Resources in Latin America Osmel E. Manzano M.,Fernando Navajas,Andrew

Powell,2017-11-15 Revenues from commodities are extremely important for Latin America and the Caribbean, yet there is very little literature on the structure of these industries and on the various ways in which the state obtains commodity revenues. This book aims to understand the trade-off between the degree of taxation overall, the profitability of the relevant industry and the amount of investment and subsequent production in the region, as well as the relevance of institutions in the performance of the sector. This volume focuses on economic efficiency: where Latin America stands in terms of the current tax system for the extractive sector; how policies have changed in this regard; and how policies may be improved. The Economics of Natural Resources in Latin America is timely, since this new era of lower and volatile prices and possible reconfiguration of investment flows poses a challenge to natural resource tax systems in the world. The argument of the book will be made by a collection of papers around the issue of tax efficiency in the region and concludes with chapters on institutions and the role of transparency. This book shows that there are varieties of experiences in resource taxation and management of revenues in Latin America that could be used to shape policy interventions in other regions. This variety is not only related to their diverse impact on welfare, but also on the policy challenges faced by the countries in the region. This volume is well suited for those who study and find interest in development economics, political economy and public finance, as well as policy

History of the Geological Sciences in Argentina Victor A. Ramos,2025-05-23 The science of geology is intertwined with the growth of the field in Argentina. This book explores those dual historical developments and, as an expanded translation of Historia de la Geología Argentina: Una Crónica de Más de Dos Siglos, shares them with a global audience. Drawing on the author's extensive work throughout the country as well as documents and photographs from the archives of the National Geological Survey, General Archive of the Nation, and the universities of Buenos Aires, Córdoba, and La Plata, this book offers a once-in-a-century look at developments in the field of geology from a country-specific perspective.

The Late Cenozoic of Patagonia and Tierra del Fuego J. Rabassa,2011-09-22 Written by highly qualified Argentine scientists and scholars, this book focuses on the uninterrupted geological and paleontological record of Patagonia and Tierra

del Fuego since the Miocene-Pliocene boundary to the arrival of man and modern times. This region is an outstanding area for research, with significant interest at the international level. It provides an updated overview of the scientific work in all related fields with a strong paleoclimatic approach. Patagonia has also been a sort of a paleoclimatic bridge between the Antarctic Peninsula and the more northerly land masses, since the final opening of the Drake Passage in the middle Miocene. Timely and comprehensive, *The Late Cenozoic of Patagonia and Tierra del Fuego* is the only monograph book written in English.* One-stop resource for paleontological information of the Late Cenozoic of Patagonia* Covers 5 million years in the uninterrupted history of Patagonia and Tierra del Fuego* Comprehensive coverage of the region written by highly qualified Argentine scientists and scholars

Hydrogeology of a Large Oil-and-Gas Basin in Central Patagonia Mario Alberto Hernández,Nilda González,Lisandro Hernández,2017-02-07 This book analyzes the most important geohydrological aspects of the San Jorge Gulf Basin (Chubut and Santa Cruz provinces, Argentine Patagonia), with a particular focus on the physical and hydrodynamic characteristics of the system. Discovered in 1907, the San Jorge Gulf Basin was the first petroleum and gas-producing basin in Argentina. It is also one of the most important areas with real prospects for non-conventional exploitation (shale oil-gas). After characterizing the hydroclimatic background (hydrometeorological parameters and water balance), the book describes the main physical aspects: geomorphology, soils and surface as well as subsoil geology, especially lithology, structures, stratigraphy and hydrogeology.

The Argentina Continental Margin Roberto A. Violante,Cecilia Laprida,Natalia L. García Chaporí,2017-03-24 The evolution of the Argentina Continental Margin during the Quaternary and the stratigraphic and morphosedimentary configuration responded to climatic variability, oceanographic changes, glacioeustatic fluctuations and tectono-isostatic processes, which began to impact on the margin during previous geological periods. The final modeling of the margin was achieved in the late Miocene, when the interaction between the Antarctic and North Atlantic water-masses favored climatic and oceanographic changes with a profound effect on morphosedimentary features. In the Quaternary, the different regions of the margin distinctly responded to such changes. Whereas in the shelf the main modeling factors were the sea-level fluctuations of glacioeustatic origin and consequent marine-continental stratigraphic records, in the slope (particularly in the

sector corresponding to the passive margin) the prevailing effect was the interaction between water-masses and the sea floor, giving origin to contouritic depositional systems accompanied of gravity processes responsible of turbiditic and mass-wasting deposits. Different relationships between contouritic and turbiditic facies respond to distinct combinations of oceanic circulation variability and the indirect effect on the sea floor of sea-level fluctuations. As a result of this complexity in the regional processes in the framework of the broad hemispheric oceanographic-climatic conditioning factors, the ACM can be considered as a complete archive for the Southern Ocean.

Volcanic Landscapes and Associated Wetlands of Lowland Patagonia Elizabeth Mazzoni,Jorge Rabassa,2018-01-10 This book presents the most relevant basaltic plateau exposures in the provinces of Neuquén (northern Patagonia) and Santa Cruz (southern Patagonia), and analyzes their geomorphological and morphometric characteristics. The existence of wetland ecosystems near the volcanic plateaus is quantified, thus providing indexes that describe the quantitative relationships between these landscape features. These indexes also make it possible to estimate the development of these wetlands in non-surveyed areas, opening the door for studying remote, isolated areas by means of remote sensing images. In turn, the book proposes a numerical classification system for this type of landscape that summarizes the main geomorphological and hydrological characteristics.teristics.

The Soils of Argentina Gerardo Rubio,Raul S. Lavado,Fernando X. Pereyra,2018-05-30 This is the first comprehensive book on Argentinian pedology. It discusses the main soil types of Argentina, their geographical distribution, classification, functions, agricultural use, ecological aspects, and the threats to which they have been subjected during centuries of intensive and extensive management. The description of the soils is accompanied by a complete set of data, pictures and maps, including benchmark profiles and an overview of the country's agricultural production. It also deals with future scenarios of the relationships between soil science and other disciplines and the main challenges that soil science will face in the future. Further, the book explores aspects of the main soil forming factors, such as climate, vegetation, geology and geomorphology, making use of new, unpublished data and elaborations, and presents a history of pedological research in Argentina.

Growth of the Southern Andes Andrés Folguera,Maximiliano Naipauer,Lucía Sagripanti,Matías C. Ghiglione,Darío L. Orts,Laura Giambiagi,2015-11-27 This book presents recent findings on the structure and evolution of the Southern Andes. Through a detailed description of a series of orogenic segments reviewed by the different groups that have worked with structural and geophysical tools in each area over the last several years, it illustrates the diversity of mechanisms that have impacted strong orogenic gradients and consequently mountain morphology, from the southern Pampean flat subduction zone to the southern tip of the continent (33-56° S). The book also revises our conventional understanding of the source of the different Mesozoic to Cenozoic sections exhumed in the orogenic wedge, with the objective of discussing basin

mechanisms through time. A final chapter discusses probable orogenic controls that have acted together in order to explain structure, the different deformational stages and intra-orogenic extensional collapses that affected the fold and thrust belt over time.

Geopedology Joseph Alfred Zinck, Graciela Metternicht, Héctor Francisco del Valle, Marcos Angelini, 2023-01-30 This updated and revised second edition brings geopedology issues into the current context. This new edition extends the work on popular topics such as digital soil mapping, GIS and landscape mapping, and it also gives valuable insight with up-to-date theoretical discussions and new application with relevant case studies. This textbook offers a proven approach for reliable mapping of soil-landscape relationships to derive information for policy, planning and management at scales ranging from local to regional. Filled with didactic elements such as case studies, visual aids (maps, charts and figures), questions and answers, the book is of interest to geohazard studies, land use conflict analysis, land use planning, land degradation assessment, and land suitability analysis. Soil is a vital resource for society at large and an important determinant of the economic status of nations. The intensification of natural disasters and the increased land use competition for food and energy have raised awareness of the relevant role the pedosphere plays in natural and anthropogenic environments. Recent papers and global initiatives show a renewed interest in soil research and its applications for improved planning and management of this fragile and finite resource.

Slow Harms and Citizen Action Veronica Herrera, 2024 Environmental degradation is not new, yet the impact of pollution on human health and wellbeing is growing. According to the World Health Organization, 12.6 million people die annually from living or working near toxic pollution, amounting to one-quarter of global deaths. Ninety-two percent of these

deaths occur in middle or low-income countries, where the majority of the global population lives. For the millions of communities around the world where pollution is a slow moving, long-standing problem, residents born into toxic exposure often perceive pollution as part of the everyday landscape, particularly in low-resource settings. Local communities may also be both victims of pollution and complicit in perpetrating it themselves. When and how do people mobilize around slow harms? Moreover, when does citizen action around slow harms unlock policy action? In *Slow Harms and Citizen Action*, Veronica Herrera chronicles the struggle against toxic exposure in urban Latin America. Comparing advocacy movements for river pollution remediation in the capital regions of Argentina, Colombia, and Peru, Herrera explains how citizen-led efforts helped create environmental governance through networks that included impacted communities (bonding mobilization) and resourced allies (bridging mobilization). Through bonding and bridging mobilization, citizen advocacy for slow harms activated the state's regulatory capacity. Moreover, Herrera illustrates how the most successful environmental movements occurred in settings where established human rights movements had previously helped dismantle state-sponsored militarized violence. By unpacking human rights movements as thoroughfares for environmental activism, *Slow Harms and Citizen Action* sheds new light on the struggles for environmental justice in Latin America.

Market-based Instruments for Environmental Policymaking in Latin America and the Caribbean Richard M. Huber,H.

Jack Ruitenbeek,Ronaldo Seroa da Motta,1998 To preserve the environment with the lowest possible cost to the social sector means that private costs should be aligned with social costs. Many governments in the Latin American and Caribbean Region are doing this now using market-based instruments (MBIs). This publication investigates the use of MBIs in the Latin America and the Caribbean (LAC) context. The investigation covers a sample of eleven countries in the region and a cross-section of environmental issues in an urban setting.

Rivers of South America Manuel A.S Graca,Marcos Callisto,Franco Teixeira de Mello,Douglas Rodriguez

Olarite,2024-10-04 Rivers of South America examines the physical, chemical, and biological environment of South American Rivers, and the people living in their basins. The book explores the main river basins, with information on each river's history, physiography, clime, hydrology, biodiversity, ecological processes, environmental problems, management, and conservation. The book identifies conservation hotspots for riverine environments, and is enriched with a large number of maps, photos, graphs, and tables. This reference is important for aquatic ecologists, environmental authorities, local and national governments, academics, NGOs, and those interested in the preservation and management of flowing waters. - Presents boxed information in each chapter to provide clear and consistent highlights throughout - Provides a single source of information for South America's major rivers - Offers full-color photographs and topographical maps to demonstrate the beauty, major features, and uniqueness of each river system
