The 15-Minute City Carlos Moreno, 2024-05-01 A fresh and innovative perspective on urban issues and creating sustainable cities In *The 15-Minute City: A Solution for Saving Our Time and Our Planet*, human city pioneer and international scientific advisor Carlos Moreno delivers an exciting and insightful discussion of the deceptively simple and revolutionary idea that everyday destinations like schools, stores, and offices should only be a short walk or bike ride away from home. This book tells the story of an idea that spread from city to city, describing a new way of looking at living that addresses many of the most intractable challenges of our time. Hundreds of mayors worldwide have already embraced the concept as a way to help recover from the pandemic, and the idea continues to gain speed. You'll learn why more and more cities are planning to make cars far less necessary for contemporary city-dwellers and how they're planning to achieve that goal. You'll also find: Strategies for cities to recover and adapt to benefit residents, saving them precious time Techniques to change the habits of automobile-dependent city residents and maximize social benefits of living in a human-centric city Scientifically developed, research-backed solutions for enduring urban issues and problems Deeply committed to science, progress, and creativity, Moreno presents an essential and timely resource in *The 15-Minute City*, which will prove invaluable to anyone with an interest in modern and innovative approaches to consistently challenging urban issues that have bedeviled policy makers and city residents since the invention of the car.

The City in an Era of Cascading Risks Liqin Zhang, Elizabeth Kanini Wamuchiru, Claude A. Meutchehe Ngomsi, 2023-08-07 This book provides unique perspectives into newly changed political and socioeconomic urban landscapes due to COVID-19 in diverse cities and aims to provide ways to improve the resilience of cities using a global perspective, especially in a post-pandemic era. This book is divided into three sections with seventeen chapters overall. It explores the impacts of the COVID-19 on city planning, building, and maintenance; it considers city resilience and what urban risks cities are facing; and it examines urban development from diverse socioeconomic and political perspectives. The book contains multidisciplinary work by authors from China, African nations (Angola, Burundi, Cameroon, Kenya, Morocco, Nigeria), Canada, Italy, Poland, and France. This manuscript provides a global perspective as cities from Africa, China, as well as some developed countries, such as France and South Korea, were used to collect data and information concerning urban development and risks, past, present, and future responses to COVID-19 as well as any other pandemics and cities' resilience. This book is a valuable asset

to urban researchers, urban city planners, urban policymakers, public officials, undergraduates, and postgraduates interested in a comprehensive comparison between diverse socioeconomic and political cities with a unique global and post-pandemic perspective in order to improve urban city resilience.

City Rebooted, The: Networks, Connectivity And Place Identities In Singapore Heng Chee Chan, Harvey Neo, 2024-04-25 Many cities across the world continue to grapple with long-standing urban challenges even as new ones emerge. With each crisis, cities address these perennial (e.g. decentralization of urban cores and revitalising the city centre), nascent, and emergent (work-life balance, digitization of social-economy) urban challenges with a greater sense of urgency. The book adopts a multidisciplinary approach to signpost future pathways of cities, drawing on the experiences of the city-state of Singapore.

Planning Metropolitan Australia Stephen Hamnett, Robert Freestone, 2017-10-24 Australia has long been a highly (sub)urbanized nation, but the major distinctive feature of its contemporary settlement pattern is that the great majority of Australians live in a small number of large metropolitan areas focused on the state capital cities. The development and application of effective urban policy at a regional scale is a significant global challenge given the complexities of urban space and governance. Building on the editors' previous collection *The Australian Metropolis: A Planning History* (2000), this new book examines the recent history of metropolitan planning in Australia since the beginning of the twenty-first century. After a historical prelude, the book is structured around a series of six case studies of metropolitan Melbourne, Sydney, Adelaide, Perth, the fast-growing metropolitan region of South-East Queensland centred on Brisbane, and the national capital of Canberra. These essays are contributed by some of Australia's leading urbanists. Set against a dynamic background of economic change, restructured land uses, a more diverse population, and growing spatial and social inequality, the book identifies a broad planning consensus around the notion of making Australian cities more contained, compact and resilient. But it also observes a continuing gulf between the simplified aims of metropolitan strategies and our growing understanding of the complex functioning of the varied communities in which most people live. This book reflects on the raft of planning challenges presented at the metropolitan scale, looks at what the future of Australian cities might be, and speculates about the prospects of more effective metropolitan planning arrangements.

New Challenges for Sustainable Urban Mobility: Volume I Maurizio Tira, Michela Tiboni, Michele Pezzagno, Giulio Maternini, 2024-08-09 This volume is the first of a two-volume set of the Proceedings of the XXVI International Conference on Living and Walking in Cities, held September 6-8 2023 at the University of Brescia, Italy. The LWC International Conference was first organized in 1994 at the Department of Civil and Environmental Engineering of the University of Brescia (IT). This year the LWC Conference has arrived at its XXVI edition. The Conference traditionally deals with the topics of urban mobility and quality of life in urban areas, with a specific focus on vulnerable road users. The LWC Conference allows researchers,

experts, administrators, and practitioners to gather and discuss policy issues, best practices, and research findings from different perspectives. The main theme of the 2023 conference was “new challenges for sustainable urban mobility”, and the papers herein address the issue from a multidisciplinary perspective and cover a wide variety of related topics. These books are divided into four topical sections: o Transport Systems and Pedestrian Mobility o Urban Regeneration through Active Mobility o Public Transport: New Technologies and Economic Sustainability o Safe Mobility in Cities

Inventing Mobility for All Andreas Herrmann,Johann Jungwirth,2022-04-26 Inventing Mobility For All: Mastering Mobility-as-a-Service with Self-Driving Vehicles describes Mobility-as-a-Service and explains the impact of this mobility concept on social and societal life as well as on people's travel behavior.

Planning Better Cities Halvard Dalheim,2023-10-07 This textbook provides an accessible, practical guide to the strategic planning process required for the preparation of city plans from entire metropolitan areas to town centres. It fills a gap in the academic literature on the topic of strategic planning. Its conceptual and practical content together with a student friendly style and high use of practical examples make it accessible to both the student and recent graduate. Its presentation in three parts allows the reader or course leader to access those sections relevant to either their learning requirements or day-to-day work activities. The book is clearly structured into three-parts and provides flexibility in approach and learning for students taking relevant planning courses. The extensive reading list at the conclusion of each chapter provides the student with an opportunity to explore in more detail the individual topics. The practical approach equips the recent graduate with a deeper understanding of the purpose of each element of strategic planning from how to prepare a research brief to how to approach community engagement activities.

Urban Regeneration in Australia Kristian Ruming,2018-02-20 Drawing together leading urban academics, this book provides the first detailed and cohesive exploration of contemporary urban regeneration in Australian cities. It explores the multiple aspects and processes of regeneration, including planning policy (strategic and regulatory), development financing, sustainability, remediation and transport. The book puts forward a unique and innovative ‘scaled’ analysis of urban regeneration, which positions urban regeneration as more than just large-scale redevelopment projects. It examines the processes of urban change which occur outside inner suburbs, which contribute to regenerating the city as a whole. The book moves beyond the planning and economic considerations of the regeneration process to describe the social and cultural aspects of regeneration. In doing so, it focuses on the management of higher-density environments, culture as a trigger for regeneration, and community opposition to the regeneration process. Urban Regeneration in Australia would benefit academics, students and professionals of urban geography and planning, as well as those with a particular interest in Australian urbanism.

Pursuing on research items Dimitra Babalis,2021-12-16 How has Covid-19 changed society and ways to live urban

environment? How has it changed the understanding of urban space and urban lifestyles? How has it changed education and research and how pre-Covid research goals could be put under discussion in the post-Covid City? The book illustrates research fundings and investigations on how Covid-19 contingency has changed nowadays society and the ways we make research. The book is divided in three parts: Part One is trying to give some answers on how research priorities have been changed during the lockdown and how pre-Covid research goals could be put under discussion within the post-Covid City. Part Two explores contemporary attitudes regarding theoretical and practice-based research in urbanism and architecture. Part Three is dealing with Higher Education.

Green Cities Yves Earhart, 2024-10-11 Green Cities explores the transformative potential of urban areas in combating climate change, challenging the notion that cities are inherently unsustainable. The book delves into climate-responsive urban design, green infrastructure integration, and sustainable transportation systems, presenting a vision of cities as regenerative ecosystems rather than environmental burdens. With over 70% of global carbon emissions originating from urban centers, the book argues that cities hold the key to mitigating climate change while enhancing livability. The book's approach combines historical context with cutting-edge research, utilizing case studies, climate models, and economic analyses to support its arguments. It introduces readers to concepts like biomimicry in urban design, exploring how cities can emulate natural systems to become more efficient and resilient. The book progresses through three main sections, covering nature-inspired urban planning, green infrastructure implementation, and reimagining urban mobility. What sets Green Cities apart is its systems-thinking approach, viewing cities as complex, interconnected organisms. This perspective allows for innovative solutions that address multiple urban challenges simultaneously, making the book valuable for urban planners, policymakers, architects, and engaged citizens alike. By presenting practical strategies and acknowledging implementation challenges, the book offers a hopeful and actionable blueprint for urban transformation in the face of climate change.

Transforming Our World Through Universal Design for Human Development I. Garofolo, G. Bencini, A. Arengi, 2022-09-29 An environment, or any building product or service in it, should ideally be designed to meet the needs of all those who wish to use it. Universal Design is the design and composition of environments, products, and services so that they can be accessed, understood and used to the greatest extent possible by all people, regardless of their age, size, ability or disability. It creates products, services and environments that meet people's needs. In short, Universal Design is good design. This book presents the proceedings of UD2022, the 6th International Conference on Universal Design, held from 7 - 9 September 2022 in Brescia, Italy. The conference is targeted at professionals and academics interested in the theme of universal design as related to the built environment and the wellbeing of users, but also covers mobility and urban environments, knowledge, and information transfer, bringing together research knowledge and best practice from all over the world. The book contains

72 papers from 13 countries, grouped into 8 sections and covering topics including the design of inclusive natural environments and urban spaces, communities, neighborhoods and cities; housing; healthcare; mobility and transport systems; and universally-designed learning environments, work places, cultural and recreational spaces. One section is devoted to universal design and cultural heritage, which had a particular focus at this edition of the conference. The book reflects the professional and disciplinary diversity represented in the UD movement, and will be of interest to all those whose work involves inclusive design.

Humane and Sustainable Smart Cities Eduardo M. Costa, 2020-11-19 *Humane and Sustainable Smart Cities* explores how to develop emergent smart cities that are rooted in humane, innovative and sustainable values (CHIS). The book considers the move from technocratic and idealized smart metropole to humane cities as a product of fundamental demographic changes, the development of a usage-based rather than an ownership economy, the novel implications of digitalization, decentralization and decarbonization, and Internet-enabled changes in public opinion towards democratization and participation. The book's authors explore seven dimensions and characteristics of humane, sustainable and innovative cities in the developing world: the economy, people, the place, energy and the environment, mobility, social inclusion and governance. Additional sections the operationalization of the CHIS concept into formal planning, policy implementation, and impact assessment considerations. Final discussions center on building a roadmap for planners seeking to design development policies conducive to human values and long-term social viability. - Provides an axiological framework for the development of humane, innovative and sustainable cities - Examines how that framework can be operationalized into formal planning, policy implementation and impact assessment - Explores humane, innovative and sustainable cities in terms of seven dimensions, including the economy, people, the place, energy and the environment, mobility, social inclusion and governance - Explores proven paths for promoting effective community engagement in developing humane cities - Provides a practical roadmap to design development policies conducive to human values and long-term social viability

Urban Dystopias Jane Burry, Marcus White, 2023-01-04 Guest-edited by Marcus White and Jane Burry Cities are facing several coinciding global crises. There is the dominant existential narrative of the impact of and adaptation to climate change, itself powered by cities. In a time of unprecedented urbanisation and growth, resilient architecture and urbanism is needed in response. New modes of transport, renewed anxiety about robots taking jobs, AI, and the humbling recent experience of a global pandemic are all challenging norms and expectations. All of these are forces of social division, all are changing life experience, evoking strong-arm politics, and giving a sense of teetering between radically different possible futures. This is a story about reclaiming the urban design narrative and being alert to the potential impacts of socio-technical decision-making and design in cities. It is a story for its time. The issue explores the dichotomy of idealised visions for the design of urban settlements and the potentially shocking realities that may emerge from the same impulses and intentions. It

examines the slippery territory between utopias and some of the ensuing dystopias that may unfold. Contributors: Tridib Banerjee, Daniele Belleri and Carlo Ratti, Steve Glackin, Justyna Karakiewicz, Nano Langenheim and Kongjian Yu, Mehrnoush Latifi, Andong Lu, Dan Nyandega, Jordi Oliveras, Kas Oosterhuis, Claudia Pasquero and Marco Poletto, Ian Woodcock, and Tianyi Yang. Featured architects: Carlo Ratti Associati, ecoLogicStudio, Harrison and White, Turenscape, and Anton Markus Pasing, Remote Control Studio.

Smart Cities, Energy and Climate Oleg Golubchikov, Komali Yenneti, 2024-07-10 Collective insight of key thought leaders in the field to clarify and reshape the vision of smart cities *Smart Cities, Energy and Climate: Governing Cities for a Low-Carbon Future* is a seminal work that draws together representative insights and case studies on post-carbon urbanism across a variety of fields from smart energy grids to active buildings, sustainable mobility and urban design. Another objective is to foster an understanding of how digitally-enhanced smart city solutions can assist energy transitions, and what new developments and challenges they bring in areas ranging from urban governance to energy security. Key topics covered in this book include: Recent developments in urban planning, building design and smart technologies Urban-scale digital platforms and innovation for clean energy systems, energy efficiency and net-zero policies Socio-technical and political relationships in climate-neutral cities and smart cities Context-rich, situated perspectives from Europe, Africa and Asia *Cities, Energy and Climate Governing Cities for a Low-Carbon Future* serves as a primary reference for scholars, students and policy makers interested in the conceptual, technical, economic and political challenges associated with the transition towards a smart and sustainable urban future.

The City and the Super-Organism Marco Amati, 2021-12-02 This book traces how naturalism—the idea of a common theory uniting natural social systems—has contributed to major shifts in urban planning. Beginning in the 17th century, when the human body began to emerge as an inspiration for urban planning, the book examines the work of medical analyses of city life. Responding to the 19th century industrial revolution and 20th century modernism, the Second World War and mass motorisation, Dr Marco Amati shows how vitalism, eugenics, evolutionary theories and medical treatments were applied to understand cities and propose new urban forms. While critically evaluating the uses of naturalism, Amati also observes a renewed interest in the application of sciences to analyse city life, arguing that this is essential to help resolve challenges of human-induced climate change.

Enabling Immobilities: Social and Spatial Implications for Urban Planning Giovanni Lanza, 2025-03-12 This book presents a novel perspective on immobility, a topic often overlooked in urban planning and transport studies. It argues that conceptualizing, measuring, and analyzing the diverse forms in which individual immobilities manifest can provide crucial insights for designing more inclusive and sustainable planning policies. Immobility is here framed as a relative condition, where individuals experience reduced movement across time and space compared to others. While mobility is often seen as

essential for social inclusion, this book challenges the notion that immobility is inherently negative. Instead, it positions immobility as not only the result of specific personal or spatial constraints but also as a reversible, voluntary choice to reduce daily travel. This choice can be influenced by the level of accessibility and proximity to valued spatial opportunities and can yield significant socio-environmental benefits. The book introduces an innovative framework that integrates immobility into urban planning theory and practice. Through case studies, it addresses four main operational challenges to foster a deeper understanding of immobility's social and spatial implications: the measurement of immobility, the analysis of spatial conditions that facilitate chosen immobility, the exploration of the lived experiences of immobility, and the examination of planning policies that can promote reversible immobility to advance social inclusion and sustainability. By examining immobility in both its constrained and reversible forms, the book contributes to broader debates on how to achieve inclusion, sustainability, and accessibility through planning.

The 15 Minute City Natalie Whittle, 2021-12-02 15-minute city, noun: 'a city that is designed so that everyone who lives there can reach everything they need within 15 minutes on foot or by bike' Cities define the lives of all those who call them home: where they go, how they get there, how they spend their time. But what if we structured the way we live in our cities differently? What if we travelled differently? What if we could get back the time we would have spent commuting and make it our own? In this carefully researched and readily accessible book, Natalie Whittle interrogates the notion of the 15-minute city: its pros, its cons and its potential to revolutionise modern living. With global warming at crisis point and Covid-19 responses bringing a previously unimaginable decline in commuting, Whittle's timely book serves as a call to reflect on the 'hows' and 'whys' of how we live our lives. Building her study around consideration of space and time, Whittle traverses both to collect models from ancient Athens to modern Paris and demonstrate how one idea could change our daily lives – and the world – for good.

Geelong's Changing Landscape David Jones, Phillip Roös, 2019-11-01 Geelong's Changing Landscape offers an insightful investigation of the ecological history of the Geelong and Bellarine Peninsula region. Commencing with the penetrating perspectives of Wadawurrung Elders, chapters explore colonisation and post-World War II industrial development through to the present challenges surrounding the ongoing urbanisation of this region. Expert contributors provide thoughtful analysis of the ecological and cultural characteristics of the landscape, the impact of past actions, and options for ethical future management of the region. This book will be of value to scientists, engineers, land use planners, environmentalists and historians.

Urban Playground Tim Gill, 2021-03-03 What type of cities do we want our children to grow up in? Car-dominated, noisy, polluted and devoid of nature? Or walkable, welcoming, and green? As the climate crisis and urbanisation escalate,

cities urgently need to become more inclusive and sustainable. This book reveals how seeing cities through the eyes of children strengthens the case for planning and transportation policies that work for people of all ages, and for the planet. It shows how urban designers and city planners can incorporate child friendly insights and ideas into their masterplans, public spaces and streetscapes. Healthier children mean happier families, stronger communities, greener neighbourhoods, and an economy focused on the long-term. Make cities better for everyone.
