*Manipulation* Robert Noggle, 2025-02-24 Gaslighting, flattery, misdirection, nagging, emotional blackmail, charm offensives, playing on emotions. These are all examples of ordinary manipulation. Such manipulation is common in everyday life, which is unfortunate, since manipulation seems like a bad thing. *Manipulation: Its Nature, Mechanisms, and Moral Status* answers three questions about manipulation: what is it, how does it work, and why is it bad? Addressing the first question requires us to find something that all forms of manipulation have in common, but which is not shared by other forms of influence. Robert Noggle argues that the common feature of all forms of ordinary manipulation is that they are mistake-inducing. This idea is the basis for the Mistake Account of manipulation, which defines manipulation as a kind of influence that operates by introducing a mistake into the mental states or processes of the person being influenced. To explain how manipulation works, this book explores the psychological levers that manipulators use to get us to make the mistakes that will get us to do what they want. These include various cognitive and decision-making biases, our tendency to choose the lesser good over the greater good when the lesser good is immediately available, and the simple fact that human reason is an imperfect thing. To explain why manipulation seems like a bad thing, Noggle first argues that, while manipulation is always presumptively immoral, it can be justified in extreme situations. He then shows that manipulation's presumptive immorality derives from the fact that it involves getting someone to make a mistake, and making a mistake is a bad thing. However, the most morally egregious instances of manipulation also have bad effects on well-being and autonomy. This book concludes by applying the Mistake Account to various influences, including priming, conditioning, nudges, advertising, sales, and online influences.

**The Manipulative Mode** Ilja Leonard Pfeijffer, Karl A. E. Enenkel, 2017-07-31 This book deals with political propaganda in classical antiquity, exploring the contexts, strategies, and parameters of a fascinating phenomenon that has often been approached with anachronistic models (such as the centrally organized 'propaganda machines' of the 20th-century totalitarian regimes) or completely ignored. It offers case studies on the archaic period, classical Athens, the Hellenistic

kingdoms, the Augustan age and the late Roman empire, and emphasizes concepts such as interaction, integration, and horizontal orientation.

*Functional Neurology for Practitioners of Manual Therapy* Randy W. Beck, 2007-11-30 This clinical textbook explores the neurological impact of manual therapies. The text serves to demystify the clinical results seen by practitioners of manual therapy and scientifically validates the clinical success, as well as the limitations, of these approaches. This textbook is an ideal reference for health care professionals including neurologists, orthopaedists, chiropractors, osteopaths and physical and occupational therapists.

*Searching for Immune Tolerance Manipulating New Molecules and Exploiting New Concepts on Lymphocyte Biology* Karina Pino-Lagos, Sergio Quezada, Diego Francisco Catalán, Juan C. Aguilón, 2016-07-27 The break on immune tolerance is a common point between autoimmune diseases and the uncontrolled effector immune responses against allo-antigens in transplantation. Among the past years, several approaches to restore a suppressive immune state have included the targeting of co-stimulatory/inhibitory molecules on immune cells, the promotion or blockade of pivotal cytokines, and the extensive study on how to isolate and expand suppressive cells with the purpose to re-infuse them in patients. To date, the availability of new technologies has permitted to learn, in a more detailed way, the immune mechanisms carried out by suppressive lymphocytes, together with the identification of new potential candidates to target in our quest for immune tolerance. For example, the attractive concepts of lymphocyte plasticity and function stability, supported by the finding of new transcription factors, have opened a new window in the understanding of T cell differentiation, effector cell commitment and immune regulatory function. On the other hand, the discovery of new members of the Ig superfamily ligand, VISTA; the intriguing role of modulatory molecules like Retinoic Acid, Neuropilin-1, Fc gamma receptors, or cytokines such as IL-33, among others, are revealing new possibilities in the development of new strategies to conquer our obsession: immune tolerance. Here, we gather the latest information regarding new targets and cellular processes, including an update on current cellular therapies and the exciting coming approaches to cure autoimmunity and permit transplant acceptance.

**Host Manipulations by Parasites and Viruses** Heinz Mehlhorn, 2015-11-09 This edited volume focuses on parasite-host relationships and the behavioral changes parasites may trigger in their hosts. Parasites have developed strategies which enhance their chances to find a host to survive inside its body and to become most easily transmitted to one another. Many of these parasites influence the host's behavior by various mechanisms, so that the rate of their transmissions to further hosts becomes considerably enhanced in comparison to that of non-influenced specimens of the same host species. A broad number of recent studies elucidate more and more examples in an extreme spectrum of host-parasite relationships, where successful transmission and /or survival of a parasite inside a host is based on parasite-derived behavioral manipulations of the hosts. In the literature, an increasing numbers of papers appear which prove that these behavioral alterations are based on complicated psychoimmunologic, neuropharmacologic and genomically steered mechanisms. Researchers working in parasitology or behavioral sciences will find this work thought-provoking, instructive and informative.

*Handbook of Nutraceuticals and Functional Foods* ROBERT E C WILDMAN, PhD, 2016-04-19 Scientific advances in this field have not only given us a better understanding of what is an optimal diet, but has allowed food and nutraceutical companies to market products with specific health claims, fortify existing foods, and even create new foods designed for a particular health benefit. *Handbook of Nutraceuticals and Functional Foods*, Second Edition, compiles the latest data from authoritative, scientific sources. It provides hard evidence on the prophylactic and medicinal properties of many natural foods. This handbook reviews more than 200 nutraceutical compounds. Each chapter includes the chemical properties, biochemical activity, dietary sources, and evidentiary findings for each compound. New topics include the use of exopolysaccharides from lactic acid bacteria, protein as a functional ingredient for weight loss, and nutraceuticals to be used in the adjunctive treatment of depression. Two new chapters discuss recent evidence on oxidative stress and the antioxidant requirements of athletes as well as the use of nutraceuticals for inflammation. The scientific investigation of nutrition and lifestyle changes on the pain and debilitation of osteoarthritis is the subject of another new article. The book concludes with a look at future marketing opportunities paying particular attention to the alleviation of obesity. With contributions from a panel of leading international experts, *Handbook of Nutraceuticals and Functional Foods*, Second Edition, provides instant

access to comprehensive, cutting edge data, making it possible for food scientists, nutritionists, and researchers to utilize this ever growing wealth of information.

**Medicinal Fatty Acids in Inflammation** J. Kremer, 2013-03-11 This volume of Progress in Inflammation Research is a unique compilation of work performed by a wide spectrum of investigators from different medical disciplines. It is fascinating that dietary alterations of fatty acid intake can result in a range of salutary changes in a great variety of medical conditions. Most of the good scientific work which has led to these observations has been performed over just the last two decades. This is of course not a very long time in the context of the history of the human species. Recently performed analysis of fat intake from paleolithic times has indicated that our hunter-gatherer ancestors consumed as much cholesterol as modern Western man, but strikingly less saturated fatty acid and more polyunsaturated fatty acids, including n-3 fatty acids. Wild game has the terrestrial source of n-3 incorporated in its fat since browsing animals derive 18:3n-3 (alpha-linolenic acid) naturally from leafy plants. There is, however, little opportunity for modern Western man to get n-3 fatty acids from the diet if one does not consume fish. Modern agribusiness provides animal feeds high in n-6 fatty acids, mostly derived from linoleic acid (18:2n-6) in corn feed. Therefore, grazing animals have no access to alternative fatty acids in either feed or grasses, the latter containing little or none of these potentially beneficial highly polyunsaturated fatty acids.
