Fundamentals of Environmental and Toxicological Chemistry Stanley E. Manahan, 2013-02-25 *Fundamentals of Environmental and Toxicological Chemistry: Sustainable Science, Fourth Edition* covers university-level environmental chemistry, with toxicological chemistry integrated throughout the book. This new edition of a bestseller provides an updated text with an increased emphasis on sustainability and green chemistry. It is organized based on the five spheres of Earth's environment: (1) the hydrosphere (water), (2) the atmosphere (air), (3) the geosphere (solid Earth), (4) the biosphere (life), and (5) the anthrosphere (the part of the environment made and used by humans). The first chapter defines environmental

chemistry and each of the five environmental spheres. The second chapter presents the basics of toxicological chemistry and its relationship to environmental chemistry. Subsequent chapters are grouped by sphere, beginning with the hydrosphere and its environmental chemistry, water pollution, sustainability, and water as nature's most renewable resource. Chapters then describe the atmosphere, its structure and importance for protecting life on Earth, air pollutants, and the sustainability of atmospheric quality. The author explains the nature of the geosphere and discusses soil for growing food as well as geosphere sustainability. He also describes the biosphere and its sustainability. The final sphere described is the anthrosphere. The text explains human influence on the environment, including climate, pollution in and by the anthrosphere, and means of sustaining this sphere. It also discusses renewable, nonpolluting energy and introduces workplace monitoring. For readers needing additional basic chemistry background, the book includes two chapters on general chemistry and organic chemistry. This updated edition includes three new chapters, new examples and figures, and many new homework problems.

Handbook on Metalloproteins Ivano Bertini, Astrid Sigel, 2001-06-29 This Handbook on Metalloproteins focuses on the available structural information of proteins and their metal ion coordination spheres. It centers on the metal ions indispensable for life but also considers metal ions used as substitution probes in studies of metalloproteins. Emphasizing the structure-function relationship, the book covers the common

The Nature and Properties of Soils Nyle C. Brady, Ray R. Weil, 1996 Explores the principles/properties of soils - their physical, chemical, and biological characteristics - and highlights the processes by which soils interact with the environment. It also considers construction engineering and landscape architecture applications of soil science principles.

Herbicides, 2021-06-23 Herbicides: Chemistry, Efficacy, Toxicology, and Environmental Impacts addresses contemporary debates on herbicide toxicology. The reader is offered a comprehensive overview of this complex topic, presented by internationally recognized experts. Information presented will inform discussions on the use of herbicides in modern agricultural and other systems, and their potential non-target effects on human populations and various ecosystems. The book covers these matters in concise language appropriate to engage both specialists in the research community and informed persons responsible for legislative, funding, and public health matters in the community at large. The use of herbicides is an essential pillar of modern agricultural production systems. Weeds, if uncontrolled, would reduce crop yield and result in massive economic damage. Recently, the heavy reliance on single herbicides has been linked to the development of weed resistance. To combat resistant weeds, farmers are advised to use a mix of several herbicides and to increase herbicide application rates. As a result, the toxicity of herbicides on human health and the environment has become a controversial topic. - Offers a comprehensive overview of herbicide science in modern agricultural systems - Addresses the complex problems that can arise from herbicide use and misuse, including weed resistance, pollution, and human health

issues - Uses recent examples to demonstrate the topical nature of this issue

Planting Design Patrick Mooney,2019-10-30 Landscape designers have long understood the use of plants to provide beauty, aesthetic pleasure and visual stimulation while supporting a broad range of functional goals. However, the potential for plants in the landscape to elicit human involvement and provide mental stimulation and restoration is much less well understood. This book meshes the art of planting design with an understanding of how humans respond to natural environments. Beginning with an understanding of human needs, preferences and responses to landscape, the author interprets the ways in which an understanding of the human-environment interaction can inform planting design. Many of the principles and techniques that may be used in planting design are beautifully illustrated in full colour with examples by leading landscape architects and designers from the United Kingdom, Europe, North America and Asia, including: Andrea Cochran, Andrea Cochran Landscape Architecture, San Francisco, CA Design Workshop Inc. Richard Hartlage, Land Morphology, Seattle, WA Shunmyo Masuno, Japan Landscape Consultants Ltd., Yokohama Piet Oudolf, Hummelo, The Netherlands Melody Redekop, Vancouver Christine Ten Eyck, Ten Eyck Landscape Architects Inc., Austin, TX Kongjian Yu, Turenscape Ltd., Beijing. The book stimulates thought, provides new direction and assists the reader to find their own unique design voice. Because there are many valid processes and intentions for landscape design, the book is not intended to be overly prescriptive. Rather than presenting a strict design method and accompanying set of rules, Planting Design provides information, insight and inspiration as a basis for developing the individual designer's own expression in this most challenging of art forms.
