Art in Motion: Exploring Dynamic Installations and Kinetic Sculptures Ahmed Musa,2025-01-06 Bring art to life with *Art in Motion*, an exploration of dynamic installations and kinetic sculptures that defy traditional boundaries. This book highlights groundbreaking artists and the techniques they use to create pieces that move, change, and interact with their environments. Rich with visuals and expert commentary, *Art in Motion* celebrates the fusion of technology and creativity. Perfect for artists, curators, and art enthusiasts, this book inspires new ways to experience and create art in motion.

The Oxford Handbook of Sound Art Jane Grant,John Matthias,David Prior,2021-09-27 Sound art has long been resistant to its own definition. Emerging from a liminal space between movements of thought and practice in the twentieth century, sound art has often been described in terms of the things that it is understood to have left behind: a space between music, fine art, and performance. The *Oxford Handbook of Sound Art* surveys the practices, politics, and emerging frameworks of thought that now define this previously amorphous area of study. Throughout the Handbook, artists and thinkers explore the uses of sound in contemporary arts practice. Imbued with global perspectives, chapters are organized in six overarching themes of Space, Time, Things, Fabric, Senses and Relationality. Each theme represents a key area of development in the visual arts and music during the second half of the twentieth century from which sound art emerged. By offering a set of thematic frameworks through which to understand these themes, this Handbook situates constellations of disparate thought and practice into recognized centers of activity.

Adaptive Motion Compensation in Radiotherapy Martin J. Murphy,2011-12-14 External-beam radiotherapy has long been challenged by the simple fact that patients can (and do) move during the delivery of radiation. Recent advances in imaging and beam delivery technologies have made the solution—adapting delivery to natural movement—a practical reality. *Adaptive Motion Compensation in Radiotherapy* provides the first detailed treatment of online interventional techniques for

motion compensation radiotherapy. This authoritative book discusses: Each of the contributing elements of a motion-adaptive system, including target detection and tracking, beam adaptation, and patient realignment Treatment planning issues that arise when the patient and internal target are mobile Integrated motion-adaptive systems in clinical use or at advanced stages of development System control functions essential to any therapy device operating in a near-autonomous manner with limited human interaction Necessary motion-detection methodology, repositioning techniques, and approaches to interpreting and responding to target movement data in real time Medical therapy with external beams of radiation began as a two-dimensional technology in a three-dimensional world. However, in all but a limited number of scenarios, movement introduces the fourth dimension of time to the treatment problem. Motion-adaptive radiation therapy represents a truly four-dimensional solution to an inherently four-dimensional problem. From these chapters, readers will gain not only an understanding of the technical aspects and capabilities of motion adaptation but also practical clinical insights into planning and carrying out various types of motion-adaptive radiotherapy treatment.

African Art as Philosophy Souleymane Bachir Diagne, 2023-09-05 This critically acclaimed study offers a distinct, incisive look at how Senegalese philosopher Senghor sees in African art the most acute expression of Bergson's philosophy. Léopold Sédar Senghor (1906–2001) was a Senegalese poet and philosopher who in 1960 also became the first president of the Republic of Senegal. In *African Art as Philosophy*, Souleymane Bachir Diagne uses a unique approach to reading Senghor's influential works, taking as the starting point for his analysis Henri Bergson's idea that in order to understand philosophers, one must find the initial intuition from which every aspect of their work develops. In the case of Senghor, Diagne argues that his primordial intuition is that African art is a philosophy. To further this point, Diagne looks at what Senghor called the "1889 Revolution" (the year Bergson's *Time and Free Will* was published), as well as the influential writers and publications of that period—specifically, Nietzsche and Rimbaud. The 1889 Revolution, Senghor claims, is what led him to the understanding of the "Vitalism" at the core of African religions and beliefs that found expression in the arts.

The Fourth Dimension and Non-Euclidean Geometry in Modern Art, revised edition Linda Dalrymple Henderson, 2018-05-18 The long-awaited new edition of a groundbreaking work on the impact of alternative concepts of space on modern art. In this groundbreaking study, first published in 1983 and unavailable for over a decade, Linda Dalrymple Henderson demonstrates that two concepts of space beyond immediate perception—the curved spaces of non-Euclidean geometry and, most important, a higher, fourth dimension of space—were central to the development of modern art. The possibility of a spatial fourth dimension suggested that our world might be merely a shadow or section of a higher dimensional existence. That iconoclastic idea encouraged radical innovation by a variety of early twentieth-century artists, ranging from French Cubists, Italian Futurists, and Marcel Duchamp, to Max Weber, Kazimir Malevich, and the artists of De Stijl and Surrealism. In an extensive new Reintroduction, Henderson surveys the impact of interest in higher dimensions of

space in art and culture from the 1950s to 2000. Although largely eclipsed by relativity theory beginning in the 1920s, the spatial fourth dimension experienced a resurgence during the later 1950s and 1960s. In a remarkable turn of events, it has returned as an important theme in contemporary culture in the wake of the emergence in the 1980s of both string theory in physics (with its ten- or eleven-dimensional universes) and computer graphics. Henderson demonstrates the importance of this new conception of space for figures ranging from Buckminster Fuller, Robert Smithson, and the Park Place Gallery group in the 1960s to Tony Robbin and digital architect Marcos Novak.

Time in Art Shaharee Vyaas, 2021-12 Art exists in time as well as space. Time implies change and movement; movement implies the passage of time. Movement and time, whether actual or an illusion, are crucial elements in art although we may not be aware of it. An artwork may incorporate actual motion; that is, the artwork itself moves in some way. Or it may incorporate the illusion of, or implied movement. Time has had a significant influence in the world of visual arts. Artists have depicted various symbols for time to express its impact as a philosophical question that is reflected in the human existence, or important events in history to represent the passing of time. This essay is not another guide to show the evolution of art through time, but about the evolution of our perception of time through art.

Imaging in Acute Stroke – New Options and State of the Art Anders Fogh Christensen,Hanne Christensen,2018-09-05

One in six suffers a stroke during their lifetime and stroke remains the major cause of new onset disability in adulthood. The worldwide burden of stroke is increasing due to an ageing population, however, globally half of stroke victims are young. Stroke is the clinical diagnosis of an acute vascular incident and covers a multitude of pathophysiological causes. The clinician needs imaging to make decisions on acute treatment as well as to plan a secondary prevention strategy: a non-contrast CT and a Duplex of the carotids followed by an aspirin as a one size fits all strategy does not always provide sufficient support for those decisions. Presently, fast, generally available, and non-invasive imaging provides new possibilities of establishing a cause of stroke, provide specific information on the brain parenchyma – including possibly salvageable tissue and micro-bleeds – as well as allowing for more specific prognostication in acute stroke. This eBook covers both ischemic and haemorrhagic stroke and includes hot topics such as micro-bleeds, salvageable tissue and spot-sign, clinically challenging issues including movement artefacts in MRI as well as an overview of present options including pragmatic and feasible suggestions for an approach to state of the art acute imaging.
