Applied Electrostatic Precipitation K.R. Parker, 2012-12-06 Many industrial, power generation and chemical processes produce unwanted fine particulate material as a consequence of their operation. Electrostatic precipitation is a highly efficient method of removing entrained particulate contaminants from exhaust gases and is extensively used in these industries to limit particulate emissions. New legislation aimed at improving the environment by further limiting these discharges has resulted in the technique undergoing considerable development over the past decade, to the point where it has become the method of choice, over a wide range of applications, for limiting particulate discharges. In this new book, the editor has brought together an international team of contributors, mainly industrialists and consultants, to produce an authoritative and practical guide to electrostatic precipitation. This book is of interest to all those in process industries or power generation and to academics concerned with gas cleaning and environmental issues.

Current State of the Art Electrical and Security Engineering Design Harry Zackrison, 2022-11-03 There are three primary goals that this book wishes to achieve: (1) Herein is the most prevalent standardized electrical calculations for use in reducing redundancy in the work effort, reducing repetitive errors, and freeing up more time for productive and innovative and imaginative engineering solutions. (2) Providing a standardized checklist worksheet for field survey work of existing conditions to help facilitate obtaining all the necessary materials the first time around and without errors and omissions. And (2) the maximum security achievable for our highly classified facilities that we are dependent upon for our survival. Four secondary goals we wish to achieve are (1) various methods for conserving energy and resources, (2) the evaluation of life cycle of energy-saving design techniques and equipment selection, (3) the use of a standardized value engineering (VE) guide when performing value engineering workshops, and (4) employing various A and E, VE methods that can be employed for

reducing first costs, operating costs, and life cycle costs (LCCs), all the while conserving energy and resources.

Designing with Solar Power Deo Prasad, Mark Snow, 2014-04-23 Designing with Solar Power is the result of international collaborative research and development work carried out within the framework of the International Energy Agency's Photovoltaic Power Systems Programme (PVPS) and performed within its Task 7 on 'Photovoltaic power systems in the built environment'. Each chapter of this precisely detailed and informative book has been prepared by an international expert in a specific area related to the development, use and application of building-integrated photovoltaics (BiPV). Chapters not only cover the basics of solar power and electrical concepts, but also investigate the ways in which photovoltaics can be integrated into the design and creation of buildings equipped for the demands of the 21st century. The potential for BiPV, in both buildings and other structures, is explored together with broader issues such as market deployment, and international marketing and government strategies. In addition, more than 20 contemporary international case studies describe in detail how building-integrated photovoltaics have been applied to new and existing buildings, and discuss the architectural and

technical quality, and the success of various strategies. Packed with photographs and illustrations, this book is an invaluable companion for architects, builders, designers, engineers, students and all involved with the exciting possibilities of building-integrated photovoltaics.
