Rich's Vascular Trauma E-Book Todd E. Rasmussen, Nigel R M Tai, 2021-08-12 For more than 40 years, Rich's Vascular Trauma has been surgeons' #1 reference for the diagnosis and treatment of vascular injury in both civilian and military settings across the globe. Published in association with the Society for Vascular Surgery (SVS), the fully updated 4th Edition reflects recent changes in vascular injury patterns, wounds, and trauma care, drawing from current research and a wide variety of peer-reviewed publications to keep you up to date with the latest evidence-based management strategies and techniques. Written and edited by vascular surgeons who are also trauma specialists—civilian and military experts who have proficiency in both open-surgical and endovascular techniques—this must-have reference offers a global perspective on every aspect of the broad spectrum of vascular trauma. - Covers all vascular surgery procedures required to stop hemorrhage and restore perfusion in vessels in the limbs, junctional areas, torso and neck, including damage control techniques such as shunting, and endovascular techniques such as REBOA and stenting. - Addresses pre-hospital, emergency department, surgical, and endovascular stages of treatment in developed, austere and deployed settings, including a rich section on vascular trauma in multiple international settings that provides important context for the global surgical community. - Includes nine new chapters covering prehospital management, endovascular suites, stent-grafts, selective aortic arch perfusion, extracorporeal systems and gathering evidence in vascular trauma, and more. - Presents surgical techniques in step-by-step, highly illustrated detail, as well as high level, strategic decision-making such as the logistics of setting up an

endovascular trauma service. - Includes a new, rapidly digestible Tips and Tricks section summarizing how to execute essential vascular maneuvers and management steps to ensure that patients get the best outcomes. - Emphasizes the current management of civilian vascular injuries while drawing upon the best available evidence, experience, and lessons learned from Afghanistan, Iraq, and the urban battlefield. - Contains an innovative chapter on the systems approach and quality improvement in vascular trauma, offering information and tactics for all providers wishing to understand how clinical systems underpin patient outcome and recovery. - Enhanced eBook version included with purchase. Your enhanced eBook allows you to access all of the text, figures, and references from the book on a variety of devices.

Manual of Definitive Surgical Trauma Care 2E Kenneth Boffard, 2007-08-31 Unless dealing with injury regularly, few surgeons can attain and sustain the level of skill necessary for decision making in major trauma. This includes both the intellectual decisions and the manual dexterity required to perform all the manoeuvres needed for surgical access and control. These can be particularly challenging, and may be infrequently required, yet rapid access to and control of sites of haemorrhage following trauma can be life-saving surgical intervention. Many situations require specialist trauma expertise, yet often this is simply not on hand within the available time frame. Manual of Definitive Surgical Trauma Care, Second Edition, is written by the editorial board of the DSTCTM, which is a short course focusing on the life-saving surgical techniques and surgical decision-making required for surgeons who deal with major surgical trauma on an infrequent basis. This course supplements the well-recognized and accepted American College of Surgeons' Advanced Trauma Life Support (ATLS®) course. This manual is published in association with IATSIC (the International Association for the Surgery of Trauma and Surgical Intensive Care), and is written by an Editorial Board of surgeons who belong to that society. IATSIC are broadening their reach and running more and more courses worldwide. This new second edition has been updated to incorporate all recent developments in this rapidly progressing area. It emphasizes how practical 'real-life' decisions on the care of the injured patient should be made and then covers in practical terms the surgical techniques required. Every aspect of surgical trauma care is covered, including: ·the causation of injuries - aids rapid understanding of presented trauma; ·the initial, pre-hospital and emergency department care of the patient - all of which may determine eventual outcome; ·the resources required, both physical and intellectual, within the hospital to deal with the specific problems associated with patients with multiple injuries; the limitations in providing specialist expertise within the time frame required. It is an ideal practical manual for both trainees and qualified surgeons.

General Trauma Care and Related Aspects Hans-Jörg Oestern, Otmar Trentz, Selman Uranues, 2013-10-22 There currently is a clear tendency to an increasing number of accidental injuries in elderly people, in sport injuries and car crashes also in countries which recently joined the European Union and candidates to join the European Union. Patients expect very good functional results even after serious injuries. But in contrast to this development, Trauma Surgery as an independent field, is

not yet established in all European countries. Therefore, it seems mandatory to compile a book that covers the state-of-the-art in Trauma Surgery. The book also serves to harmonise the practice of Trauma Surgery within the European Union, and to prepare for the exam of the U.E.M.S.

Critical Care Nursing Leanne Aitken, Andrea Marshall, Thomas Buckley, 2023-12-19 The internationally acclaimed text *Critical Care Nursing* is designed to support undergraduate and postgraduate students and critical care nurses in practice to develop the knowledge and skills necessary to deliver high quality patient care to contribute to improved patient outcomes. There is a focus on the scope and principles of practice, quality and safety standards, ethical considerations, and increased support for nurses. Highly regarded by clinicians and students around the world, this book will encourage and challenge you to develop world-class practice and ensure the delivery of the highest quality care. - Latest research, technologies and care considerations collated by an internationally respected team of editors and contributors - Case studies, research vignettes and learning activities to support further learning - Practice tips, case studies and learning activities link theory to practice - Endorsed by the Australian College of Critical Care Nurses (ACCCN), the peak professional organisation representing critical care nurses in Australia - Accompanying adaptive quizzing to support students with assessment preparation Instructor resources on Evolve: - Case Study suggested responses - Learning Activity suggested responses - Additional Case Study answers - Image, Table, Box collection Student and Instructor resources on Evolve: - Additional Case Studies - Fully updated with the most recent research, data, procedures and guidelines from expert international critical care nursing clinicians and academics - Increased focus on pandemic-related considerations, including COVID-19, woven throughout all chapters

Recent Advances in Neurotraumatology Norio Nakamura, Takuo Hashimoto, Masaharu Yasue, 2012-12-06 The dawn of neurosurgery can be traced back to the first description preserved in the Edwin Smith papyrus' (3000 Be) which dealt with head and spinal injury. In the course of 5000 years, since the first record in Egypt, advances in lifestyle and technology have brought about our modern civilized society. However, as a result of civilization, currently the total number of severe head injuries worldwide is believed to exceed 10000000 and the number of severe spinal injuries is believed to be more than 75 000 each year. This means that central nervous system injury is not only the oldest topic in neurosurgery, but that it is also of critical importance in modern life. Taking these problems into consideration, the International Neurotraumatology Committee was organized in 1965 as an affiliated Committee of the World Federation of Neurosurgical Societies. The first scientific meeting was convened by the Committee in Marseilles in 1970. Nine further meetings were subsequently held, in Europe, Africa, and South America. The meeting was first named International Conference on Recent Advances in

Neurotrauma tology (ICRAN) by Professor Phillip Harris, when the scientific meeting was held in Edinburgh in 1982. The tenth meeting, (ICRAN 1992), the first one in Asia, was held at Karuizawa, Japan, from September 23rd to 26th, 1992.

Business Continuity Andrew Hiles, 2004 This book is intended to be a step-by-step guide to implementation of business continuity management within an enterprise. It may be used as a step-by-step guide by those new to Business Continuity Management or dipped into by the more seasoned professional for ideas and updates on specific topics. In many cases, the corporate BC Manager acts as an internal consultant, and we have treated him or her as such in this book: the book is therefore equally appropriate for practicing consultants. This book is the second edition of the first book to be based on the ten Core Units of Competence for Business Continuity established jointly by BCI and DRII, and to create a practical, step-by-step framework to guide an enterprise through the implementation of a business continuity program based on these ten units. This book has been endorsed by both The Business Continuity Institute International (BCI) and The Disaster Recovery Institute International (DRII). Both organizations have included forewords to this book.

Chapters are extensions of works presented at the International Conference on Management of Ergonomic Design, Industrial Safety and Healthcare Systems. The book addresses the need to have the knowledge of technological and resource management, clinical performances and quality of healthcare delivery systems in order to make hospital systems well and adequately designed and operationally effective ensuring the quality of healthcare to patients. It is a useful resource for students, researchers, industrial professionals and design engineers.

Manual of Definitive Surgical Trauma Care, Fifth Edition Kenneth D Boffard, 2019-05-22 Developed for the International Association for Trauma Surgery and Intensive Care (IATSIC), the Manual of Definitive Surgical Trauma Care 5e is ideal for training all surgeons who encounter major surgical trauma on an infrequent basis. This new edition includes both an e-version, and also a microSD card containing over 20 operative videos. The increasing role of non-operative management (NOM) has been recognised, and the Military Module is substantially updated to reflect recent conflict experience. An expanded section highlights trauma management under austere conditions. Written by faculty who teach the DSTC Course, this definitive and well established book focuses on life-saving surgical techniques to use in challenging and unfamiliar incidents of trauma.

Pediatric Sedation Outside of the Operating Room Keira P. Mason, 2014-10-11 This is a major revision, updating, and expansion of the leading single-source volume on pediatric sedation outside of the operating room. Edited and written by an international roster of outstanding experts, it is the only book aimed at the broad range of specialists who deliver pediatric sedation in the non-OR setting. The Second Edition features a significant expansion of contributions from international leaders and individual new chapters on pre-sedation assessment; sedatives' short- and long-term effects on neurocognition; non-pharmacologic distractions; Michael Jackson's death and medical ethics; the role of simulation in safety and training; and palliative sedation in terminally ill children. The specialty-specific chapters continue to be geared toward all sedation providers, regardless of where they practice and patient safety is again emphasized. Fundamental chapters provide in-depth reviews of topics which include, among others, physiology and pharmacology. The book presents the latest guidelines across the specialties, both in the United States and abroad and noteworthy, ongoing research endeavors. From reviews of the First Edition: "This meritorious volume is a splendid collection of materials from highly experienced authors...I will make extensive use of this reference as the academic medical center in which I work continues to build sedation practices and assess credentialing/privileging aspects for professionals of all fields." —Joseph R. Tobin, MD in *Journal of the American Medical Association*. "Brings together sedation practice from a broad range of specialties into one well-written pediatric text...I will certainly be using this book as a reference text in the future." — *Pediatric Anesthesia*. "The first [text] directed at all specialists that treat children who require some sedation...also recognizes the contributions to pediatric sedation of many international societies and governmental organizations...It should be on the shelves of all office-based practices." —*Journal of Neurosurgical Anesthesiology*. With the ever-increasing opportunities to perform various investigations and therapeutic procedures, combined with increasing demands and expectations from children and their parents, the need and demand for safe and effective sedation of paediatric patients outside the operating room is increasing. Against this background, the second edition of 'Pediatric Sedation Outside the Operating Room' is a very timely addition to the anaesthesia literature.—*British Journal of Anesthesia*

Critical Care Taylor Johnston, Steven Miller, Joseph Rumley, 2022-05-27 *Critical Care: A Problem-Based Learning Approach* provides a comprehensive review of the dynamic and ever-changing field of critical care. Its problem-based format incorporates a vast pool of practical, ABA board-exam-style multiple-choice questions for self-assessment, and is an ideal resource for exam preparation as well as ongoing clinical education among trainees and clinicians. Each of its 35 case-based

chapters is accompanied by questions and answers, accessible online in a full practice exam. The cases presented are unique, as each chapter begins with a case description, usually a compilation of several actual cases; it then branches out through case-based questions, to increasingly complex situations. This structure is designed to create an authentic experience that mirrors that of working through the nuances of a complicated clinical scenario. The discussion sections that follow offer a comprehensive approach to the chapter's subject matter, thus creating a modern, complete, and up-to-date medical review of that topic.

Trauma Centers and Acute Care Surgery Osvaldo Chiara, 2021-10-15 This book offers an overview of acute care surgery around the world, focusing on the four main branches of this novel subspecialty: trauma, general emergencies, critical care, and rescue surgery. The book's primary goal is to provide a general view of acute care surgery, while addressing the most important issues in depth. The content is divided into three parts, the first of which is dedicated to the general organization of trauma centers, including the composition of modern trauma teams. Protocols of activation and action for the trauma team, as well as damage control procedures both in the emergency room and in the surgical theatre, are described. The book also addresses the development of a trauma registry, together with the quality assessment process that can be applied. In turn, the second part describes the principal protocols for making diagnoses, with special attention to circumstances such as unstable hemodynamics, neurological deterioration, normal vital signs, and penetrating injuries. The book subsequently deals with the most important aspects of trauma to the abdomen, chest, and pelvis, with notes on both surgical and intensive care issues. Practical descriptions of how to treat principal injuries to various organs are also provided. Finally, the third part of the book is dedicated to the most frequent general surgical emergencies and rescue surgical approaches, and includes information on diagnostic support with point of care ultrasound and endoscopic advanced techniques. Presenting cutting-edge strategies, this book will be of interest to professionals involved in surgical and intensive care for emergency conditions, such as colonic perforations, obstructions, acute pancreatitis, biliary tree stones, and caustic injuries.
