The Oxford Textbook of Clinical Research Ethics Ezekiel J. Emanuel, Christine C. Grady, Robert A. Crouch, Reidar K. Lie, Franklin G. Miller, David D. Wendler, 2011-02 The Oxford Textbook of Clinical Research Ethics is the first comprehensive and systematic reference on clinical research ethics. Under the editorship of experts from the U.S. National Institutes of Health of the United States, the book's 73 chapters offer a wide-ranging and systematic examination of all aspects of research with human beings. Considering the historical triumphs of research as well as its tragedies, the textbook provides a framework for analyzing the ethical aspects of research studies with human beings. Through both conceptual analysis and systematic reviews of empirical data, the contributors examine issues ranging from scientific validity, fair subject selection, risk benefit ratio, independent review, and informed consent to focused consideration of international research ethics, conflicts of interests, and other aspects of responsible conduct of research. The editors of The Oxford Textbook of Clinical Research Ethics offer a work that critically assesses and advances scholarship in the field of human subjects research. Comprehensive in scope and depth, this book will be a crucial resource for researchers in the medical sciences, as well as teachers and students.

The Nature of Nature Bruce Gordon, William Dembski, 2014-04-29 The intellectual and cultural battles now raging over theism and atheism, conservatism and secular progressivism, dualism and monism, realism and antirealism, and transcendent reality versus material reality extend even into the scientific disciplines. This stunning new volume captures this titanic clash of worldviews among those who have thought most deeply about the nature of science and of the universe itself. Unmatched in its breadth and scope, The Nature of Nature brings together some of the most influential scientists, scholars, and public intellectuals—including three Nobel laureates—across a wide spectrum of disciplines and schools of thought. Here they grapple with a perennial question that has been made all the more pressing by recent advances in the natural sciences: Is the fundamental explanatory principle of the universe, life, and self-conscious awareness to be found in inanimate matter or immaterial mind? The answers found in this book have profound implications for what it means to do science, what it means to be human, and what the future holds for all of us.

Human Medical Research Jan Schildmann, Verena Sandow, Oliver Rauprich, Jochen Vollmann, 2012-03-14 Medical

research involving human subjects has contributed to considerable advancements in our knowledge, and to medical benefits. At the same time the development of new technologies as well as further globalisation of medical research raises questions that require the attention of researchers from a range of disciplines. This book gathers the contributions of researchers from nine different countries, who analyse recent developments in medical research from ethical, historical, legal and socio-cultural perspectives. In addition to reflections on innovations in science such as genetic databases and the concept of “targeted therapy” the book also includes analyses regarding the ethico-legal regulation of new technologies such as human tissue banking or the handling of genetic information potentially relevant for participants in medical research. Country and culture-specific aspects that are relevant to human medical research from a global perspective also play a part. The value of multi- and interdisciplinary analysis that includes the perspectives of scholars from normative and empirical disciplines is a shared premise of each contribution.

Darwinian Evolution and Classical Liberalism Stephen C. Dille, 2013-05-02 Darwinian Evolution and Classical Liberalism canvasses an array of thinkers from the past to the present as it examines fundamental political, philosophical, ethical, economic, anthropological, and scientific aspects of the ferment between Darwinian biology and classical liberalism. Early chapters focus on classical thinkers like John Locke and Adam Smith, while later chapters provide analyses of present-day classical liberals, focusing especially on F.A. Hayek, Thomas Sowell, and Larry Arnhart, the most prominent advocates of ‘contemporary’ classical liberalism. Thematically, the volume falls into three parts. Part I examines foundational matters, arguing that Darwinism and classical liberalism hold incompatible visions of morality, human nature, and individual autonomy. This section also contends that the free market’s spontaneous order is fully compatible with a teleological (or non-Darwinian) view of the universe. Part II turns to contemporary applications, contending that Darwinism and classical liberalism are at odds in their views of (or implications about) limited government, vital religion, economic freedom, and the traditional family. This section also argues that, since its inception, Darwinism has attenuated core tenets and values of classical liberalism and Western civilization. Part III of the volume contains alternative views to those in the first two parts, adding critical diversity to the book. Respectively, these chapters hold that Darwinian evolution simply has little to say about classical liberalism; an evolutionary account of human volition is fully compatible with the individual choice presupposed in classical liberalism; and evolutionary naturalism, unlike religious alternatives, provides a strong foundation for freedom, morality, and the traditional family.

Controversies in Latin American Bioethics Eduardo Rivera-López, Martin Hevia, 2019-06-19 This book offers a first rate selection of academic articles on Latin American bioethics. It covers different issues, such as vulnerability, abortion, biomedical research with human subjects, environment, exploitation, commodification, reproductive medicine, among others. Latin American bioethics has been, to an important extent, parochial and unable to meet stringent international standards of rational philosophical discussion. The new generations of bioethicists are changing this situation, and this book demonstrates that change. All articles are written from the perspective of Latin American scholars from several disciplines such as philosophy and law. Working with the tools of analytical philosophy and jurisprudence, this book defends views with rational argument, and opening for pluralistic discussion.

Paediatric Intensive Care Nursing Michaela Dixon, Doreen Crawford, 2012-11-28 Paediatric Intensive Care Nursing The needs of critically ill children are unique and highly specialised. Paediatric Intensive Care Nursing is an essential manual of care and an invaluable resource to all those involved in the care of critically ill children and young people. Covering all the key aspects of paediatric intensive care, it is a fully comprehensive textbook which provides an evidence-based and up-to-date guide for all nurses who work with critically ill children. Paediatric Intensive Care Nursing is structured in four user-friendly sections: The first section looks at the general background of paediatric intensive care. Section two employs a systems approach, with each chapter focusing on a specific disease and following the same framework. This includes treating children with cardiac conditions, acute neurological dysfunction, muscular skeletal injuries and gastrointestinal and endocrine care. Section three looks at the essential care of managing pain relief, transportation needs and treating wounds.

The final section explores the holistic aspects of nursing - nutrition and fluid management, infection control issues, safeguarding children, spirituality and bereavement. Written by a team of experts in the field, Paediatric Intensive Care Nursing is indispensable reading for nurses and health care professionals working with critically ill children.
